

TEST REPORT

TEST OF A NON-CATALYTIC WOOD HEATER FOR EMISSIONS AND EFFICIENCY

PER EPA METHODS 28R AND ASTM E2515 and ASTM E2780, MAY 2015

Client:

Morso Jernstoberi A/S
Furvej 6, 7900 Nykobing Morso
Denmark

Model name: Morso 6100 B series (6140 B, 6143 B, 6148 B and 6170 B)

Attention: Rafael Sanchez

TESTED BY:

Services Polytests inc.
695-B Gaudette
St-Jean-sur-Richelieu, QC, J3B 7S7

TEST DATES: April 22nd to 25th 2024

REPORT DATE: May 8th 2024

Revision1: October 1st 2024

Revision 2: December 3rd 2024

Revision 3 December 17th 2024

Project number: PI-20306

All services undertaken are subject to the following general policy: Reports are submitted for exclusive use of the clients to whom they are addressed. This document may not be reproduced except in its entirety without the written permission from Services Polytests Services Polytests have not been involved in any R&D design consulting regarding this unit as requested by the NSPS. Results only apply to samples submitted to test.

Revision list:

Revision 1 October 1st 2024:

- Update section 3.1 & 1.4 additional information that the aging was done at medium heat draw
- Appendix 3 updated to remove EM-001 (all temperatures from the test are from EM-015 & EM-154 calibrated in December 2023)
- Table 2.5 updated to include tunnel Velocity (ft/min)

Revision 2 December 3rd 2024:

- Update Warranty in the manual appendix 7 (p.26-27) in the manual.

Revision 3 December 17th 2024:

- Update table 2.2 for Co significant numbers

List of appendixes

- APPENDIX 1: Raw data, forms and results

- APPENDIX 15: 30-day notice, WHA, other

1 INTRODUCTION

1.1 GENERAL

Laboratory

- Location: Services Polytests Inc., 695-B Gaudette St-Jean-sur-Richelieu QC, Canada J3B 7S7
- Elevation: 100 feet above sea level

Test program

- Purpose: unit qualification NSPS 2020
- Test dates: April 22nd to 25th 2024
- Test methods used:
 - Particulate emissions: ASTM E2780-10; ASTM E2515-11 methods 28R as referred into 40 CFR Part 60 Subpart AAA
 - Efficiency: CSA B415.1-10

1.2 TEST UNIT INFORMATION

General

- Unit tested: Morso 6100 B series (6140 B, 6143 B, 6148 B and 6170 B)

Appliance Manufacturer: Morsø Jernstøberi A/S

Wood Stove Model: 6100 B series

Type: Freestanding, convection-type wood fired room heater.

WOOD HEATER INFORMATION

Materials of Construction: The unit is constructed primarily of cast iron with a stainless-steel secondary combustion air box placed at the upper back of the firebox. The firebox is lined with molded vermiculite firebricks, sides, back and two baffles. The feed door has a large glass panel and 8 mm diameter fiberglass gasket.

Air Introduction System: Air enters the firebox through an opening located at the back of the appliance. Primary combustion air is channeled through the air controller holes down through the manifold that is located behind the door at the top of the door frame.

Secondary air enters the appliance through the back and is channeled internally to a stainless-steel box located at the upper back of the firebox. The stainless-steel box has two rows of air nozzles.

Combustion Control Mechanisms: The combustion air inlet is controlled by a handle located above the fuel loading door. Combustion air control mechanism is a sliding rod with flat plates attached that cover and uncover air inlets when the rod is pushed left or right. Only the primary combustion air is adjustable, the secondary combustion air is fixed.

Combustor: N/A

Internal Baffles: An angled baffle made of vermiculite is mounted in the upper portion of the firebox. The flame path is forced to the front of the firebox where it travels up through the opening between the baffle and primary air manifold. Above this baffle there is a second baffle also made of vermiculite

Other Features: None

Flue Outlet: The 6" diameter flue outlet is centered at the top of the appliance.

1.3 RESULTS

Emission results obtained

- Weighted Average Emissions Rate: 1,82 g/hr
- Weighted Average Overall Efficiency: 73,5 %

Conformity: NSPS Phase 2020

1.4 PRETEST INFORMATION

- Unit condition: The unit was received by carrier in good condition in February 2024. The 50hrs of aging was done by the Laboratory at medium burn rate. Fuel: BC FIR between 19% and 25%. (All data in Appendix 4).

Set up

- Venting system type: 6-inch steel pipe and insulated chimney
- System height from floor: 15 feet
- Particularities: none

2 SUMMARY OF TEST RESULTS

2.1 EMISSIONS

| Run Number | Test Date (YYYY-MM-DD) | Emission Rate (g/hr) | Burn Rate (kg/hr) | 1st hour Emission Rate (g/hr) | CSA B415.1 CO emission Gr/hr | CSA B415.1 emission Gr/Mj | Heat output (BTU/HR) | (OHE) % HHV |
|------------|------------------------|----------------------|-------------------|-------------------------------|------------------------------|---------------------------|----------------------|-------------|

| 4 | 62 | 1108,1 | 562,22 | 10,880 | 11,355 | 2,70 | 2,90 |

2.6 DILUTION TUNNEL DUAL TRAIN PRECISION

| Run Number | Sample Ratio | | Total Emission (g) | | | |
|------------|--------------|---------|--------------------|---------|-------------|----------------|
| | Train 1 | Train 2 | Train 1 | Train 2 | % Deviation | Deviation g/kg |
| 1 | 1072,64 | 1022,64 | 1,91 | 2,02 | 2,79% | 0,078 |
| 2 | 1151,29 | 1107,05 | 2,53 | 2,32 | 4,28% | 0,142 |
| 3 | 1183,86 | 1135,28 | 1,51 | 1,56 | 1,48% | 0,032 |
| 4 | 1146,25 | 1098,37 | 3,09 | 3,19 | 1,44% | 0,064 |

2.7 GENERAL SUMMARY OF RESULTS

| Run Number | Burn Rate (kg/hr) | Average Surface Temperature (F) | Change in surface Temperature (F) | Initial Draft (in. H2O) | static pressure tunnel (in. H2O) neg. | Primary Air Setting | Run Time (min) |
|------------|-------------------|---------------------------------|-----------------------------------|-------------------------|---------------------------------------|---------------------|----------------|
| 1 | 1,376 | 442,74 | -16,7 | 0,079 | 0,180 | maximum | 61 |
| 2 | 0,870 | 401,27 | -40,0 | 0,069 | 0,200 | minimum | 101 |
| 3 | 0,969 | 408,68 | -3,1 | 0,051 | 0,180 | minimum | 88 |
| 4 | 1,359 | 476,44 | -9,8 | 0,071 | 0,180 | Medium | 62 |

3 PROCESS DESCRIPTION

3.1 DISCUSSION

The heater has been received in a good shape by a carrier in February 2024. The 50hrs Pre-burn has been done by the laboratory with crib wood at medium heat draw. The wood heater is equipped with air control handle located at the front of the heater above the door. No convection fan can be sold with the appliance, Stove is mainly made of Cast Iron and inside of the firebox covered with vermiculite.

3.2 UNIT DIMENSIONS

Baffle

- Location: between top of combustion chamber and hearth
- Restriction: 343mm X 33 mm at the front of unit
- Dimensions: covers the hearth area minus the restriction at front
- Material: Vermiculite 25 mm thickness

Bricks

- Vermiculite 25mm Thick cover all back and sides and bottom

Flue gas exhaust

- Location: top
- Dimensions: 6 in. diameter
- Material: Cast Iron

Gasket

- Door: 8 mm (diameter)round glass fiber
 - Glass: 3 mm x 8 mm glass fiber
- Refer to appendix 6 for all details and location

Overall unit dimension

- Firebox dimensions: All dimension and calculation can be found in appendix 12
- Usable volume: 0,52 cuft.
- Overall heater dimension: 18-inch-wide, 15 ½ inch deep, 31 high

Convection fan

- None

Catalyst

- None

3.3 AIR SUPPLY SYSTEM

Description

- Primary air: from the bottom through an air wash above the door.
- Secondary air: From the bottom of the stove through the back and sides and into three stainless tubes with holes.

Characterization

The following table shows the inlet and outlet sections of each system. The air introduction system number is referred to on a set of drawings in Appendix 6.

| AIR INTRODUCTION SYSTEM | | INLET (1) mm ² | | | OUTLET (mm ²) |
|-------------------------|-----------|---------------------------|------------------|------------|------------------------------|
| Identification | Type | Imin | I _{max} | Controlled | |
| A * | Primary | 456 | 1554 | Yes | 3880 |
| B * | Secondary | 289,8 | 289,8 | NO | 628,3 |
| C * | Pilot | none | none | NO | None |

* This section would be filled by measuring and comparing with the manufacturer’s drawings included in the test report.

Legend

Identification: Tag name referred to on drawings in Appendix 14, section airflow pattern

Type: Characterization of air intake

Imin: Minimum air intake of a particular air channel

I_{max}: Maximum air intake of a particular air channel

Controlled: Determines if a provision for air control is present

Outlet: Total air outlet of a particular air channel

3.4 OPERATION DURING TEST

All runs have been found appropriate, no anomalies happened and all runs below have been validate and found.

Run #1

This run was performed on April 22nd 2024. It lasted 61 minutes and the maximum burn rate was obtained at 1,38 kg/hr & emission at 1,93 gr/hr. The air inlet damper was fully open at the maximum setting.

Run #2

This run was performed on April 23rd 2024. It lasted 101 minutes and a category 2 burn rate was obtained at 0,87 kg/hr & emission at 1,44 gr/hr. The air inlet damper was fully closed at the minimum setting. the burn rate for the low burn rate category is no greater than the rate that an operator can achieve in home use.

Run #3

This run was performed on April 24th 2024. It lasted 88 minutes and a category 2 burn rate was obtained at 0,97 kg/hr & emission at 1,05 gr/hr. The air inlet damper was fully closed at the minimum setting. the burn rate for the low burn rate category is no greater than the rate that an operator can achieve in home use.

Run #4

This run was performed on April 25th 2024. It lasted 62 minutes and a category 3 burn rate was obtained at 1,36 kg/hr & emission at 3,04 gr/hr. The air inlet damper was at medium setting (mid-point setting).

- Details: Refer to the front page of each test run data sheets found in appendix for the detailed test sequence showing air supply settings and adjustments, fuel bed adjustments and operational specifics of the test unit.

Test fuel cribs

- Type of wood: Douglas fir, grade c or better, 19 to 25% dry basis moisture content
- Description: for each test, description of the fuel crib is found on the front page of each test run data sheet together with photograph in appendix.

3.5 START-UP OPERATION

The complete manufacturer's firing procedure of each burn rate category is fully described in appendix 13.

3.6 SAMPLING LOCATIONS

Particulate samples are collected from the dilution tunnel. The tunnel has two elbows ahead of the sampling section. The sampling section is a continuous 6-inch diameter pipe straight over its entire length. Tunnel velocity pressure is determined by a standard pitot tube, thermocouple is installed on the pitot tube to measure the dry bulb temperature. MC is assumed, as allowed, to be 2%. Tunnel samplers are located downstream of the pitot tube and upstream from the end of this section. All detail of dilution tunnel can be found in appendix 8.

3.7 DRAWINGS

Various drawings of the stack gas sampling train and of dilution tunnel system are found in Appendix 6.

3.8 EMISSIONS EFFICIENCY TESTING EQUIPMENT LIST

The complete test equipment list together with all corresponding calibration data can be found in Appendix 3.

4 SAMPLING METHODS

4.1 PARTICULATE SAMPLING

Particulates were sampled in strict accordance with ASTM E2515. This method uses two identical sampling systems with Gelman A/E 61631 binder free (or equivalent), 47 mm diameter filters. The dryers used in the sample systems are filled with "Drierite" before each test run.

5 QUALITY ASSURANCE

5.1 INSTRUMENT CALIBRATION

5.1.1 GAS METERS

At the conclusion of each test program the gas meters are verified using the reference dry gas meter. This process involves sampling the train operation for 1 cubic foot of volume. With readings made to .01 fr', the resolution is 1 %, giving an accuracy higher than the 2% required by the standard.

5.1.2 SCALES

Before each test program, the different scales used are checked with traceable calibration weights to ensure their accuracy.

5.1.3 GAS ANALYZERS

The continuous analyzers are zeroed and spanned before each test with NBS traceable gases. A mid-scale multi-component calibration gas is then analyzed (values are recorded). At the conclusion of a test, the instruments are checked again with zero, span and calibration gases (values are recorded only). The drift in each meter is then calculated and must not exceed 5% of the scale used for the test.

5.2 TEST METHOD PROCEDURES

5.2.1 LEAK CHECK PROCEDURES

Before and after each test, each sample train is tested for leaks. Leakage rates are measured and must not exceed 0.02 CFM or 4% of the sampling rate. Leak checks are performed checking the entire sampling train. Pre-test and post-test leak checks are conducted with a vacuum of 5 inches of mercury. Vacuum is monitored during each test and the highest vacuum reached is then used for the post-test vacuum value. If leakage limits are not met, the test run is rejected. During these tests, the vacuum is typically less than 2 inches of mercury. Thus, leakage rates reported are expected to be much higher than actual leakage during the tests.

5.2.2 TUNNEL VELOCITY FLOW MEASUREMENT

The tunnel velocity is calculated from a center point pitot tube signal multiplied by an adjustment factor. This factor is determined by a traverse of the tunnel as prescribed in EPA Method 1. Final tunnel velocities and flow rates are calculated from EPA Method 2, Equation 6.9 and 6.10. (Tunnel cross sectional area is the average from both lines of traverse.)

Pitot tubes are cleaned before each test and leak checks are conducted after each test.

5.2.3 PM SAMPLING PROPORTIONALITY (ASTM E2515)

Proportionalities were calculated in accordance with ASTM E2515. The data and results are found in appendix.

APPENDIX 1: Raw data, forms and results

|------------------------|--------|-------|
| | Before | After |
| Compliant: | X | X |
| Non Compliant: | | |

- ▣ Instrumentation St. Laurent Inc. Certify that the above instrument, meets or exceeds the specifications established by the manufacturer. The company's quality system complies with the requirements of ISO 17025 :2017 and the standards used to perform the calibration is traceable to NRC and / or NIST.
- ▣ Reported uncertainties represent a 95 % of confidence level assuming a normal distribution k=2.
- ▣ The declaration of conformity does not include Instrumentation St-Laurent Inc. uncertainty measurement. Decision rule is based on binary statement for simple acceptance rule against ILAC G8 standard and test tolerance limits are based on customer specifications, unless otherwise specified.
- ▣ The results presented in this certificate relate only to objects subject to calibration.
- ▣ It is the customer's responsibility to ensure that calibrated equipment meets its intended use.
- ▣ The date format used in this certificate is: YYYY-MM-DD.

Assessment Service Calibration Laboratory (ASCL) of the National Research Council of Canada (NRC) has assessed and certified calibration laboratory's ability and traceability to the International System of Units (SI) or to standards acceptable according to ASCL. This calibration certificate is issued in accordance with the terms of ASCL certification and accreditation requirements of the Standards Council of Canada (SCC). SCC accreditation number: # 669. ASCL and SCC does not guarantee the accuracy of individual calibrations by accredited laboratories.

CALIBRATION CERTIFICATE

CERTIFICATE # CE-EM-015/2 2023-12-11

- ▣ Instrumentation St. Laurent Inc. Certify that the above instrument, meets or exceeds the specifications established by the manufacturer. The company's quality system complies with the requirements of ISO 17025 :2017 and the standards used to perform the calibration is traceable to NRC and / or NIST.
- ▣ Reported uncertainties represent a 95 % of confidence level assuming a normal distribution k=2.
- ▣ The declaration of conformity does not include Instrumentation St-Laurent Inc. uncertainty measurement. Decision rule is based on binary statement for simple acceptance rule against ILAC G8 standard and test tolerance limits are based on customer specifications, unless otherwise specified.
- ▣ The results presented in this certificate relate only to objects subject to calibration.
- ▣ It is the customer's responsibility to ensure that calibrated equipment meets its intended use.
- ▣ The date format used in this certificate is: YYYY-MM-DD.

Assessment Service Calibration Laboratory (ASCL) of the National Research Council of Canada (NRC) has assessed and certified calibration laboratory's ability and traceability to the International System of Units (SI) or to standards acceptable according to ASCL. This calibration certificate is issued in accordance with the terms of ASCL certification and accreditation requirements of the Standards Council of Canada (SCC). ASCL and SCC does not guarantee the accuracy of individual calibrations by accredited laboratories.

Room: N/A

| Range | Max. Capacity | Readability (d) |
|-------|---------------|-----------------|
| 1 | 210 g | 0.0001 g |

Procedure

Calibration Guideline: ASTM E898 - 20
METTLER TOLEDO Work Instruction: 30260953

This calibration certificate including procedures and uncertainty estimation also complies with EURAMET cg-18 v 4.0.

This calibration certificate contains measurements for As Found and As Left calibrations.

The sensitivity/span of the weighing instrument was adjusted before As Left calibration with an external weight. As Left 200g

| | Temperature | | Humidity | |
|----------|----------------|--------------|---------------|-------------|
| As Found | Start: 20.3 °C | End: 21.5 °C | Start: 44.5 % | End: 42.9 % |
| As Left | Start: 21.8 °C | End: 22.0 °C | Start: 41.3 % | End: 40.2 % |

Environmental conditions have been verified to ensure the accuracy of the calibration.

This certificate is issued in accordance with the conditions of accreditation granted by A2LA, which is based on ISO/IEC 17025. A2LA has assessed the measurement capability of the laboratory and its traceability to recognized national standards.

| Maximum Deviation | 0.0000 g | 0.0000 g |
|-------------------|----------|----------|
|-------------------|----------|----------|

As Found

As Left

The "d" in the graph represents the readability of the range/interval in which the test was performed.

Error of Indication

As Found

| | Reference Value | Indication | Error of Indication | Expanded Uncertainty | k |
|---|-----------------|------------|---------------------|----------------------|---|
| 1 | 0.0000 g | 0.0000 g | 0.0000 g | 0.12 mg | 2 |
| 2 | 50.0000 g | 50.0002 g | 0.0002 g | 0.26 mg | 2 |
| 3 | 99.9999 g | 99.9998 g | -0.0001 g | 0.45 mg | 2 |
| 4 | 149.9999 g | 149.9996 g | -0.0003 g | 0.67 mg | 2 |
| 5 | 200.0002 g | 199.9999 g | -0.0003 g | 0.84 mg | 2 |

As Left

| | Reference Value | Indication | Error of Indication | Expanded Uncertainty | k |
|---|-----------------|------------|---------------------|----------------------|---|
| 1 | 0.0000 g | 0.0000 g | 0.0000 g | 0.10 mg | 2 |
| 2 | 50.0000 g | 50.0001 g | 0.0001 g | 0.16 mg | 2 |
| 3 | 99.9999 g | 99.9999 g | 0.0000 g | 0.23 mg | 2 |
| 4 | 149.9999 g | 149.9998 g | -0.0001 g | 0.32 mg | 2 |
| 5 | 200.0002 g | 200.0001 g | -0.0001 g | 0.34 mg | 2 |

The uncertainty stated is the expanded uncertainty at calibration obtained by multiplying the standard combined uncertainty by the coverage factor k - which can be larger than 2 according to ASTM E898 and EURAMET cg-18. The value of the measurand lies within the assigned range of values with a probability of approximately 95%.

The user is responsible for maintaining environmental conditions and the settings of the weighing instrument when it was calibrated. The results of this calibration certificate relate only to the calibrated item.

Test Equipment

All weights used for metrological testing are traceable to national or international standards. The weights were calibrated and certified by an accredited calibration laboratory.

Weight Set 1: OIML E2

| | | | |
|---------------------|-----------|-----------------------|------------|
| Weight Set No.: | 381 | Date of Issue: | 11-08-2023 |
| Certificate Number: | 220705189 | Calibration Due Date: | 31-08-2024 |

Remarks

Balance Cleaned and Calibrated.

End of Accredited Section

The information below and any attachments to this calibration certificate are not part of the accredited calibration.

Measurement Uncertainty of the Weighing Instrument in Use

Stated is the expanded uncertainty with $k=2$ in use. The formula shall be used for the estimation of the uncertainty under consideration of the errors of indication. The value R represents the net load indication in the unit of measure of the device.

Temperature coefficient for the evaluation of the measurement uncertainty in use: $3.0 \cdot 10^{-6} / K$

Temperature range on site for the evaluation of the measurement uncertainty in use: $4 K$

Linearization of Uncertainty Equation

| | Range | | As Found | As Left |
|---|----------|-------|--|--|
| | d | Max | | |
| 1 | 0.0001 g | 210 g | $U_1 = 0.13 \text{ mg} + 0.00974 \text{ mg/g} \cdot R$ | $U_1 = 0.12 \text{ mg} + 0.00772 \text{ mg/g} \cdot R$ |

To optimize the stability of the linearization, besides of the zero load only increasing measurement points with a test load of 5% of the measurement range or larger are taken for the calculation of the linear equation.

Absolute and Relative Measurement Uncertainty in Use for Various Net Indications (Examples)

| Net Indication | As Found | | As Left | |
|----------------|----------|------------|---------|------------|
| | Value | Percentage | Value | Percentage |
| 0.0210 g | 0.13 mg | 0.62% | 0.12 mg | 0.57% |
| 0.2100 g | 0.13 mg | 0.063% | 0.12 mg | 0.058% |
| 2.1000 g | 0.15 mg | 0.0072% | 0.14 mg | 0.0065% |
| 21.0000 g | 0.33 mg | 0.0016% | 0.28 mg | 0.0013% |
| 210.0000 g | 2.2 mg | 0.0010% | 1.7 mg | 0.00083% |

As Found

As Left

Custom Tolerance Assessment

Assessment done without considering measurement uncertainty.

One or more of the measurements from the attached calibration certificate were assessed against customer-defined tolerances.

BALANCES

The following balances are used for calibration purposes :

| | |
|--------------------|--|
| > 5 kg to 25 kg : | Mettler Toledo XP32003L, SNR 1123271214, max. 32100 g, d = 0.005 g |
| > 1 kg to 5 kg : | Mettler Toledo PR5003, SNR 1115311634, max. 5100 g, d = 0.001 g |
| > 300 g to 2 kg : | Mettler Toledo XP2004S, SNR B131185222, max. 2100 g, d = 0.1 mg |
| > 100 g to 200 g : | Mettler Toledo AT201 SNR BA1115230146, max. 205 g, d = 0.01 mg |
| > 5 g to 100 g : | Mettler Toledo AX106 SNR 1127063924, max. 111 g, d = 1 µg |
| 1 mg to 5 g : | Mettler UMX5, SNR 1121103055, max. 5.1 g, d = 0.1 µg |

We are also using these balances in our automated procedure :

| | |
|-------------------|--|
| > 200 g to 1 kg : | Mettler Toledo AX1005 SNR 1127063210, max. 1109 g, d = 0.01 mg |
| > 5 g to 100 g : | Mettler Toledo AX106 SNR 1120143015, max. 111 g, d = 1 µg |
| 1 mg to 5 g : | Mettler UMX5, SNR 1125140561, max. 5.1 g, d = 0.1 µg |

Our balances are periodically verified, according to our PDL-11-MG-001 control procedure.

UNCERTAINTIES:

The following uncertainties exist :

1. *Uncertainty associated with the weighting process.*
2. *Uncertainty associated with air density.*
3. *Uncertainty associated with the measurement standard.*
4. *Uncertainty associated with the density of the mass being calibrated.*

The uncertainty of the weighing process includes long-term reproducibility.

Uncertainties specified in this report are expanded uncertainties representing a confidence level of approximately 95% obtained by multiplying the combined standard uncertainty by a coverage factor of $k = 2$. For more detailed information refer to the GUM (Guide to the Expression of Uncertainty in Measurement, 1995 Edition)

TRACEABILITY

The Calibration Laboratory Assessment Service (CLAS) of the National Research Council of Canada (NRC) has assessed and certified specific calibration capabilities of this laboratory and their traceability to recognized national measurement standards and to the International System of Units (SI). This certificate of calibration is issued in accordance with the conditions of certification granted by CLAS and the conditions of accreditation granted by the Standards Council of Canada (SCC). Neither the CLAS nor the SCC guarantees the accuracy of individual calibration by accredited laboratories.

Procedure

Instruction de Calibration: ASTM E898 - 20
Instruction de travail METTLER TOLEDO: 30260953

This calibration certificate including procedures and uncertainty estimation also complies with EURAMET cg-18 v 4.0.

Ce certificat de calibration contient des mesures pour la calibration Tel que Trouvé. Aucune calibration Tel que Laissé n'a été effectuée puisque l'appareil n'a pas été modifié suite à la calibration Tel que Trouvé. Par conséquent, les résultats Tel que Laissé correspondent aux résultats Tel que Trouvé.

The calibration was agreed with the user below the maximum capacity of the balance.

| Temperature | | Environmental conditions have been verified to ensure the accuracy of the calibration. |
|----------------|-----------------------------|--|
| Tel que Trouvé | Start: 20.0 °C End: 21.0 °C | |

This certificate is issued in accordance with the conditions of accreditation granted by A2LA, which is based on ISO/IEC 17025. A2LA has assessed the measurement capability of the laboratory and its traceability to recognized national standards.

◆ Tel que Laissez

For improved legibility of the graphics only increasing measurement points are shown and measurement points close to zero are not displayed.

The uncertainty stated is the expanded uncertainty at calibration obtained by multiplying the standard combined uncertainty by the coverage factor k - which can be larger than 2 according to ASTM E898 and EURAMET cg-18. The value of the measurand lies within the assigned range of values with a probability of approximately 95%.

The user is responsible for maintaining environmental conditions and the settings of the weighing instrument when it was calibrated.
Les résultats présents dans ce certificat sont applicables uniquement aux équipements étalonnés.

Test Equipment

Tous les poids utilisés pour le contrôle métrologique sont retraçables aux étalons Nationaux et Internationaux. Les poids ont été calibrés et certifiés par un laboratoire de calibration accrédité.

Remarques

N/D

End of Accredited Section

The information below and any attachments to this calibration certificate are not part of the accredited calibration.

Incertitude de Mesure du dispositif de pesage en opération

Stated is the expanded uncertainty with k=2 in use. The formula shall be used for the estimation of the uncertainty under consideration of the errors of indication. The value R represents the net load indication in the unit of measure of the device.

Coefficient de température pour l'évaluation de l'incertitude de mesure en opération: 10.0 · 10⁻⁶ / K

Plage d'opération sur le site pour l'évaluation de l'incertitude de mesure en opération: 21 K

Linéarisation de l'Équation d'Incertitude

| | Plage | | Tel que Trouvé | Tel que Laissé |
|---|---------|--------|--|----------------|
| | d | Max | | |
| 1 | 0.05 kg | 150 kg | $U_1 = 41 \text{ g} + 0.0958 \text{ g/kg} \cdot R$ | N/A |

To optimize the stability of the linearization, besides of the zero load only increasing measurement points with a test load of 5% of the measurement range or larger are taken for the calculation of the linear equation.

Absolute and Relative Measurement Uncertainty in Use for Various Net Indications (Examples)

| Indication Net | Tel que Trouvé | | Tel que Laissé | |

- ▣ Instrumentation St. Laurent Inc. Certify that the above instrument, meets or exceeds the specifications established by the manufacturer. The company's quality system complies with the requirements of ISO 17025 :2017 and the standards used to perform the calibration is traceable to NRC and / or NIST.
- ▣ Reported uncertainties represent a 95 % of confidence level assuming a normal distribution k=2.
- ▣ The declaration of conformity does not include Instrumentation St-Laurent Inc. uncertainty measurement. Decision rule is based on binary statement for simple acceptance rule against ILAC G8 standard and test tolerance limits are based on customer specifications, unless otherwise specified.
- ▣ The results presented in this certificate relate only to objects subject to calibration.
- ▣ It is the customer's responsibility to ensure that calibrated equipment meets its intended use.
- ▣ The date format used in this certificate is: YYYY-MM-DD.

Assessment Service Calibration Laboratory (ASCL) of the National Research Council of Canada (NRC) has assessed and certified calibration laboratory's ability and traceability to the International System of Units (SI) or to standards acceptable according to ASCL. This calibration certificate is issued in accordance with the terms of ASCL certification and accreditation requirements of the Standards Council of Canada (SCC). SCC accreditation number: # 669. ASCL and SCC does not guarantee the accuracy of individual calibrations by accredited laboratories.

- ▣ Instrumentation St. Laurent Inc. Certify that the above instrument, meets or exceeds the specifications established by the manufacturer. The company's quality system complies with the requirements of ISO 17025 :2017 and the standards used to perform the calibration is traceable to NRC and / or NIST.
- ▣ Reported uncertainties represent a 95 % of confidence level assuming a normal distribution k=2.
- ▣ The declaration of conformity does not include Instrumentation St-Laurent Inc. uncertainty measurement. Decision rule is based on binary statement for simple acceptance rule against ILAC G8 standard and test tolerance limits are based on customer specifications, unless otherwise specified.
- ▣ The results presented in this certificate relate only to objects subject to calibration.
- ▣ It is the customer's responsibility to ensure that calibrated equipment meets its intended use.
- ▣ The date format used in this certificate is: YYYY-MM-DD.

Assessment Service Calibration Laboratory (ASCL) of the National Research Council of Canada (NRC) has assessed and certified calibration laboratory's ability and traceability to the International System of Units (SI) or to standards acceptable according to ASCL. This calibration certificate is issued in accordance with the terms of ASCL certification and accreditation requirements of the Standards Council of Canada (SCC). SCC accreditation number: # 669. ASCL and SCC does not guarantee the accuracy of individual calibrations by accredited laboratories.

BALANCES

The following balances are used for calibration purposes :

| | |
|--------------------|--|
| > 5 kg to 25 kg : | Mettler Toledo XP32003L, SNR 1123271214, max. 32100 g, d = 0.005 g |
| > 1 kg to 5 kg : | Mettler Toledo PR5003, SNR 1115311634, max. 5100 g, d = 0.001 g |
| > 300 g to 2 kg : | Mettler Toledo XP2004S, SNR B131185222, max. 2100 g, d = 0.1 mg |
| > 100 g to 200 g : | Mettler Toledo AT201 SNR BA1115230146, max. 205 g, d = 0.01 mg |
| > 5 g to 100 g : | Mettler Toledo AX106 SNR 1127063924, max. 111 g, d = 1 µg |
| 1 mg to 5 g : | Mettler UMX5, SNR 1121103055, max. 5.1 g, d = 0.1 µg |

We are also using these balances in our automated procedure :

| | |
|-------------------|--|
| > 200 g to 1 kg : | Mettler Toledo AX1005 SNR 1127063210, max. 1109 g, d = 0.01 mg |
| > 5 g to 100 g : | Mettler Toledo AX106 SNR 1120143015, max. 111 g, d = 1 µg |
| 1 mg to 5 g : | Mettler UMX5, SNR 1125140561, max. 5.1 g, d = 0.1 µg |

Our balances are periodically verified, according to our PDL-11-MG-001 control procedure.

UNCERTAINTIES:

The following uncertainties exist :

1. *Uncertainty associated with the weighting process.*
2. *Uncertainty associated with air density.*
3. *Uncertainty associated with the measurement standard.*
4. *Uncertainty associated with the density of the mass being calibrated.*

The uncertainty of the weighing process includes long-term reproducibility.

Uncertainties specified in this report are expanded uncertainties representing a confidence level of approximately 95% obtained by multiplying the combined standard uncertainty by a coverage factor of $k = 2$. For more detailed information refer to the GUM (Guide to the Expression of Uncertainty in Measurement, 1995 Edition)

TRACEABILITY

The Calibration Laboratory Assessment Service (CLAS) of the National Research Council of Canada (NRC) has assessed and certified specific calibration capabilities of this laboratory and their traceability to recognized national measurement standards and to the International System of Units (SI). This certificate of calibration is issued in accordance with the conditions of certification granted by CLAS and the conditions of accreditation granted by the Standards Council of Canada (SCC). Neither the CLAS nor the SCC guarantees the accuracy of individual calibration by accredited laboratories.

Calibration of**Positive displacement flow meter American Meter Company DTM-200A S/N : 99A274209****QUALITY PROGRAM CONFORMANCE**

All calibrations are performed in accordance with Polycontrols Laboratory Quality Assurance Manual and conform to ISO/IEC 17025: 2017, ISO 9001 – 2015 and/or other quality requirements defined in customers purchase descriptions. The results are strictly valid for the device under test or calibration. If applicable, the decision rule is described in the certificate.

TRACEABILITY

The traceability for flow standard to the National Institute of Standards and Technology, NIST, is maintained by Fluke Corporation of Phoenix, Arizona and conform to ISO/IEC 17025, ANSI/NCSL Z540-1-1994, ISO-10012-1 and MIL-STD 45662A.

The Calibration Laboratory Assessment Service (CLAS) of the National Research Council of Canada (NRC) has assessed and certified specific calibration capabilities of this laboratory and traceability to the International System of Units (SI) or to standards acceptable to the CLAS program. This certificate of calibration is issued in accordance with the conditions of certification granted by CLAS and the conditions of accreditation granted by the Standards Council of Canada (SCC). Neither CLAS nor SCC guarantee the accuracy of individual calibrations by accredited laboratories.

CALIBRATION OF MEASURING AND TEST EQUIPMENT

For calibration measurement capability, please refer to the Canadian Calibration Network web page at the National Research Council of Canada. This laboratory is accredited by the Standards Council of Canada as part of the Calibration Laboratory Assessment Service (CLAS) program and is listed at nrc.canada.ca.

This document forms part of the Certificate of Accreditation issued by the Standards Council of Canada (SCC). The original version is available in the Directory of Accredited Laboratories on the SCC website at www.scc.ca.

Appendix for the decision rule

Method #3 Non-binary Statement with Guard Band, uncertainty directly taken into account

This decision rule uses a guard band to define the acceptance and rejection interval. The acceptance limit is defined by the following mathematical formula $AL = TL - w$ and the rejection limit $RL = TL + w$, where $w = rU$. The multiple r that is multiplied by the expanded measurement uncertainty U can be defined following ILAC G8: 2019 table 1 section 5.2. The expanded measurement uncertainty U has a 95% coverage probability ($k = 2$). Non-binary statement with guard band exists when the result is limited to four choices: pass, conditional pass, conditional fail, and fail.

Statements of conformity are reported as:

Graphical representation of a Non-Binary Statement with a Guard Band

Case 1 – Below acceptance limit AL

Status: In tolerance

- The result is inside the acceptance interval. However, assuming a normal distribution, the risk that the result is outside the tolerance limit could be up to 2.5%. Uncertainty is directly taken into account. *Green*.

Case 2 – Below tolerance limit TL, greater than acceptance limit AL

Status: In tolerance-Conditional

- The result is outside the acceptance interval but below tolerance limit. However, the observed value is inside the guard band $w = TL - AL$ and the status is conditional on the customer's risk assessment. Uncertainty is directly taken into account. *Yellow*.

Case 3 – Greater than tolerance limit, below rejection limit RL

Status: Out of tolerance-Conditional

- The result is greater than tolerance limit but outside the rejection interval. However, the observed value is inside the guard band $w = TL - RL$ and the status is conditional on the customer's risk assessment. Uncertainty is directly taken into account. *Yellow*.

Case 4 – Greater than rejection limit RL

Status: Out of tolerance

- The result is inside the rejection interval. Uncertainty is directly taken into account. *Red*.

- This certificate shall not be altered in any form or reproduced, except in full, without prior written approval from originating lab. These results relate only to the item(s) calibrated. Form Revision 8: 08/19/2021
- Total expanded measurement uncertainties expressed are based on a confidence level of 95%; coverage factor of (k=2). The statement of compliance in this certificate was issued without taking the uncertainty of measurement into consideration. The customer shall assess the results and uncertainty when determining if the results meet their needs. (This is considered "shared responsibility.") Uncertainties expressed in nominal units.
- The calibrations within the certificate/report are traceable through NIST or another National Metrology Institute to the International System of Units (SI). Calibration was completed in accordance with ISO/IEC 17025:2017, ANSI/NCSL Z540-1-1994 and ANSI/NCSL Z540.3-2006. Other standards listed upon request.

- Instrumentation St. Laurent Inc. Certify that the above instrument, meets or exceeds the specifications established by the manufacturer. The company's quality system complies with the requirements of ISO 17025 :2017 and the standards used to perform the calibration is traceable to NRC and / or NIST.
- Reported uncertainties represent a 95 % of confidence level assuming a normal distribution k=2.
- The declaration of conformity does not include Instrumentation St-Laurent Inc. uncertainty measurement. Decision rule is based on binary statement for simple acceptance rule against ILAC G8 standard and test tolerance limits are based on customer specifications, unless otherwise specified.
- The results presented in this certificate relate only to objects subject to calibration.
- It is the customer's responsibility to ensure that calibrated equipment meets its intended use.
- The date format used in this certificate is: YYYY-MM-DD.

Assessment Service Calibration Laboratory (ASCL) of the National Research Council of Canada (NRC) has assessed and certified calibration laboratory's ability and traceability to the International System of Units (SI) or to standards acceptable according to ASCL. This calibration certificate is issued in accordance with the terms of ASCL certification and accreditation requirements of the Standards Council of Canada (SCC). SCC accreditation number: # 669. ASCL and SCC does not guarantee the accuracy of individual calibrations by accredited laboratories.

| Comments: *Limited Calibration Range: 40 - 5000 | | |

The calibrations within the certificate/report are traceable through NIST or another National Metrology Institute to the International System of Units (SI). The reported calibration uncertainty has a confidence level of 95% (k=2). A calibration uncertainty ratio of 4:1 was maintained unless required uncertainty is supported by analysis. Graftel Quality Assurance System complies with applicable requirements of ISO/IEC-17025-2017, ANSI/NCSL 7540-I-1994 and ISO 9001. All results contained within this certificate relate only to item(s) calibrated. This certificate shall not be reproduced except in full and with the written consent of Graftel. Acceptance Criteria per Simple Acceptance Rule: Measurement Uncertainty is not applied to the measured value when in/out of tolerance statement is made.

Calibration of
Positive displacement flow meter Shinigawa DCDA-2c S/N : 23544

QUALITY PROGRAM CONFORMANCE

All calibrations are performed in accordance with Polycontrols Laboratory Quality Assurance Manual and conform to ISO/IEC 17025: 2017, ISO 9001 – 2015 and/or other quality requirements defined in customers purchase descriptions. The results are strictly valid for the device under test or calibration. If applicable, the decision rule is described in the certificate.

TRACEABILITY

The traceability for flow standard to the National Institute of Standards and Technology, NIST, is maintained by Fluke Corporation of Phoenix, Arizona and conform to ISO/IEC 17025, ANSI/NCSL Z540-1-1994, ISO-10012-1 and MIL-STD 45662A.

The Calibration Laboratory Assessment Service (CLAS) of the National Research Council of Canada (NRC) has assessed and certified specific calibration capabilities of this laboratory and traceability to the International System of Units (SI) or to standards acceptable to the CLAS program. This certificate of calibration is issued in accordance with the conditions of certification granted by CLAS and the conditions of accreditation granted by the Standards Council of Canada (SCC). Neither CLAS nor SCC guarantee the accuracy of individual calibrations by accredited laboratories.

CALIBRATION OF MEASURING AND TEST EQUIPMENT

For calibration measurement capability, please refer to the Canadian Calibration Network web page at the National Research Council of Canada. This laboratory is accredited by the Standards Council of Canada as part of the Calibration Laboratory Assessment Service (CLAS) program and is listed at nrc.canada.ca.

This document forms part of the Certificate of Accreditation issued by the Standards Council of Canada (SCC). The original version is available in the Directory of Accredited Laboratories on the SCC website at www.scc.ca.

Appendix for the decision rule

Method #3 Non-binary Statement with Guard Band, uncertainty directly taken into account

This decision rule uses a guard band to define the acceptance and rejection interval. The acceptance limit is defined by the following mathematical formula $AL = TL - w$ and the rejection limit $RL = TL + w$, where $w = rU$. The multiple r that is multiplied by the expanded measurement uncertainty U can be defined following ILAC G8: 2019 table 1 section 5.2. The expanded measurement uncertainty U has a 95% coverage probability ($k = 2$). Non-binary statement with guard band exists when the result is limited to four choices: pass, conditional pass, conditional fail, and fail.

Statements of conformity are reported as:

Graphical representation of a Non-Binary Statement with a Guard Band

Case 1 – Below acceptance limit AL

Status: In tolerance

- The result is inside the acceptance interval. However, assuming a normal distribution, the risk that the result is outside the tolerance limit could be up to 2.5%. Uncertainty is directly taken into account. *Green*.

Case 2 – Below tolerance limit TL, greater than acceptance limit AL

Status: In tolerance-Conditional

- The result is outside the acceptance interval but below tolerance limit. However, the observed value is inside the guard band $w = TL - AL$ and the status is conditional on the customer's risk assessment. Uncertainty is directly taken into account. *Yellow*.

Case 3 – Greater than tolerance limit, below rejection limit RL

Status: Out of tolerance-Conditional

- The result is greater than tolerance limit but outside the rejection interval. However, the observed value is inside the guard band $w = TL - RL$ and the status is conditional on the customer's risk assessment. Uncertainty is directly taken into account. *Yellow*.

Case 4 – Greater than rejection limit RL

Status: Out of tolerance

- The result is inside the rejection interval. Uncertainty is directly taken into account. *Red*.

QUALITY PROGRAM CONFORMANCE

All calibrations are performed in accordance with Polycontrols Laboratory Quality Assurance Manual and conform to ISO/IEC 17025: 2017, ISO 9001 – 2015 and/or other quality requirements defined in customers purchase descriptions. The results are strictly valid for the device under test or calibration. If applicable, the decision rule is described in the certificate.

TRACEABILITY

The traceability for flow standard to the National Institute of Standards and Technology, NIST, is maintained by Fluke Corporation of Phoenix, Arizona and conform to ISO/IEC 17025, ANSI/NCSL Z540-1-1994, ISO-10012-1 and MIL-STD 45662A.

The Calibration Laboratory Assessment Service (CLAS) of the National Research Council of Canada (NRC) has assessed and certified specific calibration capabilities of this laboratory and traceability to the International System of Units (SI) or to standards acceptable to the CLAS program. This certificate of calibration is issued in accordance with the conditions of certification granted by CLAS and the conditions of accreditation granted by the Standards Council of Canada (SCC). Neither CLAS nor SCC guarantee the accuracy of individual calibrations by accredited laboratories.

CALIBRATION OF MEASURING AND TEST EQUIPMENT

For calibration measurement capability, please refer to the Canadian Calibration Network web page at the National Research Council of Canada. This laboratory is accredited by the Standards Council of Canada as part of the Calibration Laboratory Assessment Service (CLAS) program and is listed at nrc.canada.ca.

This document forms part of the Certificate of Accreditation issued by the Standards Council of Canada (SCC). The original version is available in the Directory of Accredited Laboratories on the SCC website at www.scc.ca.

BALANCES

The following balances are used for calibration purposes :

| | |
|--------------------|--|
| > 5 kg to 25 kg : | Mettler Toledo XP32003L, SNR 1123271214, max. 32100 g, d = 0.005 g |
| > 1 kg to 5 kg | Mettler Toledo PR5003, SNR 1115311634, max. 5100 g, d = 0.001 g |
| > 300 g to 2 kg : | Mettler Toledo XP2004S, SNR B131185222, max. 2100 g, d = 0.1 mg |
| > 100 g to 200 g : | Mettler Toledo AT201 SNR BA1115230146, max. 205 g, d = 0.01 mg |
| > 5 g to 100 g : | Mettler Toledo AX106 SNR 1127063924, max. 111 g, d = 1 µg |
| 1 mg to 5 g : | Mettler UMX5, SNR 1121103055, max. 5.1 g, d = 0.1 µg |

We are also using these balances in our automated procedure :

| | |
|-------------------|--|
| > 200 g to 1 kg : | Mettler Toledo AX1005 SNR 1127063210, max. 1109 g, d = 0.01 mg |
| > 5 g to 100 g : | Mettler Toledo AX106 SNR 1120143015, max. 111 g, d = 1 µg |
| 1 mg to 5 g : | Mettler UMX5, SNR 1125140561, max. 5.1 g, d = 0.1 µg |

Our balances are periodically verified, according to our PDL-11-MG-001 control procedure.

UNCERTAINTIES:

The following uncertainties exist :

1. *Uncertainty associated with the weighting process.*
2. *Uncertainty associated with air density.*
3. *Uncertainty associated with the measurement standard.*
4. *Uncertainty associated with the density of the mass being calibrated.*

The uncertainty of the weighing process includes long-term reproducibility.

Uncertainties specified in this report are expanded uncertainties representing a confidence level of approximately 95% obtained by multiplying the combined standard uncertainty by a coverage factor of $k = 2$. For more detailed information refer to the GUM (Guide to the Expression of Uncertainty in Measurement, 1995 Edition)

TRACEABILITY

The Calibration Laboratory Assessment Service (CLAS) of the National Research Council of Canada (NRC) has assessed and certified specific calibration capabilities of this laboratory and their traceability to recognized national measurement standards and to the International System of Units (SI). This certificate of calibration is issued in accordance with the conditions of certification granted by CLAS and the conditions of accreditation granted by the Standards Council of Canada (SCC). Neither the CLAS nor the SCC guarantees the accuracy of individual calibration by accredited laboratories.

Calibration of
Positive displacement flow meter Shinigawa DCSDa-2C S/N : S8020

QUALITY PROGRAM CONFORMANCE

All calibrations are performed in accordance with Polycontrols Laboratory Quality Assurance Manual and conform to ISO/IEC 17025: 2017, ISO 9001 – 2015 and/or other quality requirements defined in customers purchase descriptions. The results are strictly valid for the device under test or calibration. If applicable, the decision rule is described in the certificate.

TRACEABILITY

The traceability for flow standard to the National Institute of Standards and Technology, NIST, is maintained by Fluke Corporation of Phoenix, Arizona and conform to ISO/IEC 17025, ANSI/NCSL Z540-1-1994, ISO-10012-1 and MIL-STD 45662A.

The Calibration Laboratory Assessment Service (CLAS) of the National Research Council of Canada (NRC) has assessed and certified specific calibration capabilities of this laboratory and traceability to the International System of Units (SI) or to standards acceptable to the CLAS program. This certificate of calibration is issued in accordance with the conditions of certification granted by CLAS and the conditions of accreditation granted by the Standards Council of Canada (SCC). Neither CLAS nor SCC guarantee the accuracy of individual calibrations by accredited laboratories.

CALIBRATION OF MEASURING AND TEST EQUIPMENT

For calibration measurement capability, please refer to the Canadian Calibration Network web page at the National Research Council of Canada. This laboratory is accredited by the Standards Council of Canada as part of the Calibration Laboratory Assessment Service (CLAS) program and is listed at nrc.canada.ca.

This document forms part of the Certificate of Accreditation issued by the Standards Council of Canada (SCC). The original version is available in the Directory of Accredited Laboratories on the SCC website at www.scc.ca.

Appendix for the decision rule

Method #3 Non-binary Statement with Guard Band, uncertainty directly taken into account

This decision rule uses a guard band to define the acceptance and rejection interval. The acceptance limit is defined by the following mathematical formula $AL = TL - w$ and the rejection limit $RL = TL + w$, where $w = rU$. The multiple r that is multiplied by the expanded measurement uncertainty U can be defined following ILAC G8: 2019 table 1 section 5.2. The expanded measurement uncertainty U has a 95% coverage probability ($k = 2$). Non-binary statement with guard band exists when the result is limited to four choices: pass, conditional pass, conditional fail, and fail.

Statements of conformity are reported as:

Graphical representation of a Non-Binary Statement with a Guard Band

Case 1 – Below acceptance limit AL

Status: In tolerance

- The result is inside the acceptance interval. However, assuming a normal distribution, the risk that the result is outside the tolerance limit could be up to 2.5%. Uncertainty is directly taken into account. *Green*.

Case 2 – Below tolerance limit TL, greater than acceptance limit AL

Status: In tolerance-Conditional

- The result is outside the acceptance interval but below tolerance limit. However, the observed value is inside the guard band $w = TL - AL$ and the status is conditional on the customer's risk assessment. Uncertainty is directly taken into account. *Yellow*.

Case 3 – Greater than tolerance limit, below rejection limit RL

Status: Out of tolerance-Conditional

- The result is greater than tolerance limit but outside the rejection interval. However, the observed value is inside the guard band $w = TL - RL$ and the status is conditional on the customer's risk assessment. Uncertainty is directly taken into account. *Yellow*.

Case 4 – Greater than rejection limit RL

Status: Out of tolerance

- The result is inside the rejection interval. Uncertainty is directly taken into account. *Red*.

STATEMENT OF UNCERTAINTY: The reported expanded uncertainty of measurement is stated as the standard measurement uncertainty multiplied by the coverage factor $K = 2$, which for a normal distribution corresponds to a coverage probability of approximately 95 percent. Alpha Controls & Instrumentation Inc. certifies this instrument was calibrated on the date shown using standards traceable to NIST/NRC or accepted intrinsic standards and in compliance with ISO/IEC-17025:2017 and ANSI/NCSL Z540-1.

Any statement of compliance is made without taking measurement uncertainty into account and is based on UUT performance against required tolerance only. The customer must ensure equipment calibrated meets the intended use.

Tolerance is based on manufacturer specification if not stated otherwise. Calibration results relate to items calibrated only.

This certificate shall not be reproduced except in full without written approval of Alpha Controls and Instrumentation Inc.

Functional tests are not covered by our scope of accreditation.

- This certificate shall not be altered in any form or reproduced, except in full, without prior written approval from originating lab. These results relate only to the item(s) calibrated. Form Revision 8: 08/19/2021
- Total expanded measurement uncertainties expressed are based on a confidence level of 95%; coverage factor of (k=2). The statement of compliance in this certificate was issued without taking the uncertainty of measurement into consideration. The customer shall assess the results and uncertainty when determining if the results meet their needs. (This is considered "shared responsibility.") Uncertainties expressed in nominal units.
- The calibrations within the certificate/report are traceable through NIST or another National Metrology Institute to the International System of Units (SI). Calibration was completed in accordance with ISO/IEC 17025:2017, ANSI/NCSL Z540-1-1994 and ANSI/NCSL Z540.3-2006. Other standards listed upon request.

BALANCES

The following balances are used for calibration purposes :

| | |
|--------------------|--|
| > 5 kg to 25 kg : | Mettler Toledo XP32003L, SNR 1123271214, max. 32100 g, d = 0.005 g |
| > 1 kg to 5 kg : | Mettler Toledo PR5003, SNR 1115311634, max. 5100 g, d = 0.001 g |
| > 300 g to 2 kg : | Mettler Toledo XP2004S, SNR B131185222, max. 2100 g, d = 0.1 mg |
| > 100 g to 200 g : | Mettler Toledo AT201 SNR BA1115230146, max. 205 g, d = 0.01 mg |
| > 5 g to 100 g : | Mettler Toledo AX106 SNR 1127063924, max. 111 g, d = 1 µg |
| 1 mg to 5 g : | Mettler UMX5, SNR 1121103055, max. 5.1 g, d = 0.1 µg |

We are also using these balances in our automated procedure :

| | |
|-------------------|--|
| > 200 g to 1 kg : | Mettler Toledo AX1005 SNR 1127063210, max. 1109 g, d = 0.01 mg |
| > 5 g to 100 g : | Mettler Toledo AX106 SNR 1120143015, max. 111 g, d = 1 µg |
| 1 mg to 5 g : | Mettler UMX5, SNR 1125140561, max. 5.1 g, d = 0.1 µg |

Our balances are periodically verified, according to our PDL-11-MG-001 control procedure.

UNCERTAINTIES:

The following uncertainties exist :

1. *Uncertainty associated with the weighting process.*
2. *Uncertainty associated with air density.*
3. *Uncertainty associated with the measurement standard.*
4. *Uncertainty associated with the density of the mass being calibrated.*

The uncertainty of the weighing process includes long-term reproducibility.

Uncertainties specified in this report are expanded uncertainties representing a confidence level of approximately 95% obtained by multiplying the combined standard uncertainty by a coverage factor of $k = 2$. For more detailed information refer to the GUM (Guide to the Expression of Uncertainty in Measurement, 1995 Edition)

TRACEABILITY

The Calibration Laboratory Assessment Service (CLAS) of the National Research Council of Canada (NRC) has assessed and certified specific calibration capabilities of this laboratory and their traceability to recognized national measurement standards and to the International System of Units (SI). This certificate of calibration is issued in accordance with the conditions of certification granted by CLAS and the conditions of accreditation granted by the Standards Council of Canada (SCC). Neither the CLAS nor the SCC guarantees the accuracy of individual calibration by accredited laboratories.

This Air Liquide Canada mixture is traceable to NIST

METHOD OF ANALYSIS:

Method of analysis is based on principles of gas chromatography and as documented in Air Liquide Canada operating procedure, where applicable, FID, TCD, PDHID, FT-IR, FPD, NO/NOx and SO2 chemiluminescence, hygrometer, and electrochemical cells and paramagnetic cell. Detectors were used in conjunction with packed or capillary columns calibrated flow meters and dilution calibrated system.

CALIBRATION CERTIFICATE

| | |
|----------------------|-----------------------------|
| CERTIFICATE # | CE-EM-340 2023-05-11 |
|----------------------|-----------------------------|

| CALIBRATION DATE/ISSUANCE OF CERTIFICATE | |
|--|------------|
| Calibration Date: | 2023-05-11 |
| Next Calibration: | 2024-05-11 |
| Certificate Date: | 2023-05-11 |

| CALIBRATION CONFORMITY | | |
|------------------------|--------|-------|
| | Before | After |
| Compliant: | X | X |
| Non Compliant: | | |

- ▣ Instrumentation St. Laurent Inc. Certify that the above instrument, meets or exceeds the specifications established by the manufacturer. The company's quality system complies with the requirements of ISO 17025 :2017 and the standards used to perform the calibration is traceable to NRC and / or NIST.
- ▣ Reported uncertainties represent a 95 % of confidence level assuming a normal distribution k=2.
- ▣ The declaration of conformity does not include Instrumentation St-Laurent Inc. uncertainty measurement. Decision rule is based on binary statement for simple acceptance rule against ILAC G8 standard and test tolerance limits are based on customer specifications, unless otherwise specified.
- ▣ The results presented in this certificate relate only to objects subject to calibration.
- ▣ It is the customer's responsibility to ensure that calibrated equipment meets its intended use.
- ▣ The date format used in this certificate is: YYYY-MM-DD.

Assessment Service Calibration Laboratory (ASCL) of the National Research Council of Canada (NRC) has assessed and certified calibration laboratory's ability and traceability to the International System of Units (SI) or to standards acceptable according to ASCL. This calibration certificate is issued in accordance with the terms of ASCL certification and accreditation requirements of the Standards Council of Canada (SCC). SCC accreditation number: # 669. ASCL and SCC does not guarantee the accuracy of individual calibrations by accredited laboratories.

Marc Gingras - Technicien

Read this entire manual before you install and use your new room heater. If this room heater is not properly installed, a house fire may result. To reduce the risk of fire, follow the installation instructions. Failure to follow instructions may result in property damage, bodily injury, or even death.

Do not tamper with or alter the original construction of the wood stove. Modifications can lead to serious safety hazards, including fire, carbon monoxide poisoning, and voiding of the warranty. Always use the stove as designed and follow the manufacturer's instructions.

Contact local building officials about restrictions and installation inspection requirements in your area.

Save these instructions

Optional Accessories

A wide range of accessories (such as handling gloves, fireside tools, glass cleaner and heat-proof paint) are available for use with your Morsø stove. They help with day-to-day running and maintenance. Contact your Morsø dealer for more information.

The Morsø 6100 B non-catalytic wood heater series has been certified by PFS TECO. The test standards are ANSI/UL-1482-2011 (R2015) for the United States and ULC S627-00 for Canada.

The stove is listed for burning wood only. Do not burn other fuels.

U.S. ENVIRONMENTAL PROTECTION AGENCY. Certified to comply with 2020 particulate emission standards using crib wood.

Average particulate emission using EPA Method 28 crib wood test method is 1.8 g/h. Under specific test conditions this heater has been shown to deliver heat at rates ranging from 11,892 to 19,067 Btu/hr. This appliance was determined to have an average higher heating efficiency value of 74% (higher heating value) when tested in accordance with CSA B415.1

This wood heater needs periodic inspection and repair for proper operation. It is against federal regulations to operate this wood heater in a manner inconsistent with operating instructions in this manual.

Cast iron

Cast iron is a live material. There are no two ovens that are identical. This is partly due to the tolerances of the casting process, partly because the ovens are a work of craftsmanship. Minor unevennesses may also occur in the cast iron surface.

1.0 Installation of your Morsø stove

The installation must conform standard CAN/CSA-B365, Installation Code For Solid-Fuel-Burning Appliances and Equipment

Make-shift compromises during installation can have consequences, the Installation of the woodburning stoves must be safe and legal.

If your Morsø stove is not installed correctly, it may cause a house fire. To reduce the risk of fire, the installation instructions must be followed carefully. Contact the local building officials about restrictions and installation inspection in your area

Do not install in any fireplace.

Before you start installing your stove, make sure that:

- The stove and chimney connection are placed far enough from combustible materials to meet all clearance requirements.
- The floor protection must be adequate and must be made correctly according to the requirements.

All necessary approvals are needed from the local building officials.

The data plate, which is located on the back of the stove, provides information regarding safety testing information, name of certified testing laboratory, and installation requirements.

Installation requirements vary in different districts, and the local building officials have the final authorization to approve your installation. You should discuss the installation with them before beginning. Please ask your dealer for further information.

Do not connect to any air distribution duct or system.

Important: If the installation instructions are not followed carefully, it may cause dangerous situations like chimney - and house fires. Follow the instructions carefully and do not deviate from them as it may cause injuries to people or property.

1.1 Checking loose parts in the stove

After unpacking, check that the fire bricks are firmly in position and have not shifted in transit. Check also that the air control works freely.

Before starting the initial fire, make sure that the baffles is placed correctly.

Standard Accessories

A Morsø glove and ceramic flue connection gasket are standard accessories that usually can be found in the ashpan or firebox area.

1.2 The chimney / flue system

Note that the flue system must be independently secured and must not rely on the stove for support.

The stove must not be connected to a chimney flue serving any other appliance. (Several flues may run up a single chimney stack; use one flueway per appliance).

Use a code-approved masonry chimney with a flue liner or listed type HT factory-built chimney

High Temperature (H.T.) Chimney Standard UL-103-1985 (2100° F.) or a code-approved masonry chimney with flue liner for the USA, and High Temperature (650°C) Standard ULC S-629 for Canada.

The internal dimensions of the chimney connector and chimney must not be less than 6 inches diameter (or equivalent cross section), and should not be significantly larger than this. Too large a section will tend to allow the flue gases to cool excessively, causing sluggishness or unpredictability in the stove's performance.

We recommend the length of the chimney system should be at least 16 feet (not required) above the stove in normal domestic situations, measured from the flue collar to the top of the chimney.

Local conditions like for example - roof constructions, large trees nearby and high altitude, may influence the chimney draft and height. Therefore, contact the local professional chimney sweep or your Morsø dealer.

Typical Factory-Built or Masonry Chimney Installations

1.3 Flue Connection

The stove is supplied from the factory with a round blanking plate blocking off the top and rear flue exit (behind the rear shield plate).

Do not install the chimney directly at the outlet of the appliance.

A chimney connector (flue pipe) is required unless the appliance is specifically approved for that type of installation. A chimney connector are placed in the firebox area.

Use a 24 MSG black or blue chimney connector or listed double wall chimney connector. Refer to local codes and the chimney manufacturer's instructions for precautions required for passing a chimney through a combustible wall or ceiling. Remember to secure the chimney connector with a minimum of three screws to the product and to each adjoining section.

The collar can be fitted to the rear outlet. Simply knock out the round panel on the rear heat shield plate to reveal the cast iron plate. Untwist the blanking plate and the flue collar and swap their positions. Re-secure by pushing down and tighten the enclosed screws. Position the stove and connect to the flue system.

Wear gloves and protective eyewear when drilling, cutting or joining sections of chimney connector

1.4 Connection to the existing chimney

A chimney connector is the double-wall or single-wall pipe that connects the stove to the chimney. The chimney itself is the masonry or prefabricated structure that encloses the flue. Chimney connectors are used only to connect the stove to the chimney.

Double-wall connectors must be tested and listed for use with solid-fuel burning appliances. Single-wall connectors should be made of 24 gauge or heavier gauge steel. Do not use galvanized connector; it cannot withstand the high-temperatures that smoke and exhaust gases can reach, and may release toxic fumes under high heat. The connector must be 6 inches (150mm) in diameter.

If possible, do not pass the chimney connector through a combustible wall or ceiling. If passage through a combustible wall is unavoidable, refer to the sections on Wall Pass-Throughs. Do not pass the connector through an attic, a closet or similar concealed space when installing the chimney connectors.

It is important to keep the flue gases moving smoothly in the right direction. Do not vent into a large void at this location; rather form one continuous section all the way up. Use mild bends (e.g. 45° vs. 90°) rather than sharp angles where a change of direction is required. All parts of the venting must be accessible for cleaning purposes.

In horizontal runs of chimney, maintain a distance of 18 inches from the ceiling. Keep it as short and direct as possible, with no more than two 90 degree turns. Slope horizontal runs of connector upward 1/4 inch per foot (20 mm per metre) going from the stove toward the chimney. The recommended maximum length of a horizontal run is 3 feet (1 metre), and the total length should be no longer than 8 feet (2.5 metres).

Information on assembling and installing connectors is provided by the manufacturer's instructions exactly as you assemble the connector and attach it to the stove and chimney.

Be sure the installed stove and chimney connector are correct distances from near by combustible materials. See the clearance paragraph page 8.

The chimney and Chimney connector must be in good condition and kept clean.

Where passage through a wall or partition of combustible construction is desired, the installation shall conform to CAN/CSA-B365.

Be sure that all connectors between the chimney parts and the heater are sealed properly so the chimney is airtight from the heater to the chimney outlet.

Chimney Connector Systems and Clearances from Combustible Walls for Residential Heating Appliances

A Minimum 3.5-in thick brick masonry all framed into combustible wall with a minimum of 12-in brick separation from clay liner to combustibles. The fireclay liner shall run from outer surface of brick wall to, but not beyond, the inner surface of chimney flue liner and shall be firmly cemented in place.

B Solid-insulated, listed factory-built chimney length of the same inside diameter as the chimney connector and having 1-in. or more of insulation with a minimum 9-in. air space between the outer wall of the chimney length and combustibles.

C Sheet steel chimney connector, minimum 24 gauge in thickness, with a ventilated thimble, minimum 24 gauge in thickness, having two 1-in. air channels, separated from combustibles by a minimum of 6-in. of glass fiber insulation. Opening shall be covered, and thimble supported with a sheet steel support, minimum 24 gauge in thickness.

D Solid insulated, listed factory-built chimney length with an inside diameter 2-in. larger than the chimney connector and having 1-in. or more of insulation, serving as a pass-through for a single wall sheet steel chimney connector of minimum 24 gauge thickness, with a minimum 2-in. air space between the outer wall of chimney section and combustibles. Minimum length of chimney section shall be 12-in. chimney section spaced 1-in. away from connector using sheet steel support plates on both ends of chimney section. Opening shall be covered, and chimney section supported on both sides with sheet steel supports securely fastened to wall surfaces of minimum 24 gauge thickness. Fasteners used to secure chimney section shall not penetrate chimney flue liner.

1.5 Positioning the stove

The stove must be installed on a non-combustible wall.

The wall-mounting fixture is provided with four holes for mounting expansion bolts in the wall. The bolts must be sized to secure that the wall and the materials it is made from are capable of supporting the stove. If in doubt, contact an expert. The weight of the empty stove is 105 kg (232 lbs.). The wall-mounting fixture may be used as drilling template.

Mount the wall-mounting fixture on the wall. If the flue exit is wanted to the rear, build a wall bushing correctly into the wall (see illustration).

Lift the wood stove in place so that it rests on the bottom part of the wall-mounting fixture, and secure it again to the fixture by means of the screws included.

Distance to walls and lintel

When the stove is positioned near combustible materials, observe all current local and national building regulations with regards to clearances. Whatever regulations apply to your area, do not in any case install the stove within 8 inches of combustible materials around the sides or 16 inches above the top of the stove (fireplace installations require greater clearances above the stove - see below in the clearance chart). These distances may need to be increased if the materials are sensitive to heat. Note also that wall paper and other decorative materials may become detached with the effects of heat and care should be taken to ensure that they do not fall towards the stove in such an event.

If using rear exit, the floor protection must extend beneath the chimney connector and 2-in beyond each side.

| CLEARANCE REQUIREMENTS | STANDARD RESIDENTIAL INSTALLATION SINGLEWALL CONNECTOR | |
|----------------------------|---|---------|
| | USA | CANADA |
| A. Sidewall to unit | 10" | 254 mm |
| B. Backwall to unit | 3" | 76 mm |
| C. Cornerwall to unit | - | - |
| D. Sidewall to connector | 15.5" | 394 mm |
| E. Backwall to connector | 7.5" | 190 mm |
| F. Cornerwall to connector | - | - |
| G. Unit to ceiling | 54.5" | 1384 mm |
| H. Floor to ceiling | 84" | 2134 mm |

MINIMUM CLEARANCES TO COMBUSTIBLES

| CLEARANCE REQUIREMENTS | STANDARD RESIDENTIAL INSTALLATION DOUBLEWALL CONNECTOR | |
|----------------------------|---|---------|
| | USA | CANADA |
| A. Sidewall to unit | 10" | 254 mm |
| B. Backwall to unit | 2" | 51 mm |
| C. Cornerwall to unit | - | - |
| D. Sidewall to connector | 15.5" | 394 mm |
| E. Backwall to connector | 6.5" | 165 mm |
| F. Cornerwall to connector | - | - |
| G. Unit to ceiling | 54.5" | 1384 mm |
| H. Floor to ceiling | 84" | 2134 mm |

| CLEARANCE REQUIREMENTS | STANDARD RESIDENTIAL INSTALLATION REAR VENT OUT BACK WALL SINGLEWALL CONNECTOR | |
|----------------------------|--|--------|
| | USA | CANADA |
| A. Sidewall to unit | 10" | 254 mm |
| B. Backwall to unit | 6.5" | 165 mm |
| C. Cornerwall to unit | - | - |

| H. Floor to ceiling | - | - |

FLOOR PROTECTION REQUIREMENTS

ALCOVE INSTALLATION

FLOOR PROTECTOR MUST BE NON-COMBUSTIBLE MATERIAL. IT MUST EXTEND BENEATH HEATER, AND TO THE FRONT / SIDES / REAR AS INDICATED.

Maximum alcove depth must be no more than 32" (813mm)

MEASUREMENTS IN INCHES APPLY FOR US AND THE MEASUREMENTS IN MM (PARENTHESES) APPLY FOR CANADA.

| CLEARANCE REQUIREMENTS | ALCOVE INSTALLATION DOUBLEWALL CONNECTOR |
|----------------------------|---|
| A. Sidewall to unit | 12" (305 mm) |
| B. Backwall to unit | 3" (76 mm) |
| C. Cornerwall to unit | - |
| D. Sidewall to connector | 17" (432 mm) |
| E. Backwall to connector | 7.5" (190 mm) |
| F. Cornerwall to connector | - |
| G. Unit to ceiling | 24.5" (622 mm) |
| H. Floor to ceiling | 54" (1372 mm) |

Distance to furniture

The recommended minimum distance from stove to furniture is 30 inches. Note that some furniture is more easily affected by heat and may need to be moved to a greater distance. This is your responsibility.

In addition other combustible materials, away from the stove. In general, a distance of 30 inches must be maintained between the stove and moveable combustible item such as drying clothes, newspapers, firewood etc.

| FLOOR PROTECTION REQUIREMENTS | NON-COMBUSTIBLE MATERIALS BENEATH STOVE | |
|--------------------------------|--|--------|
| | USA | CANADA |
| Extending distance, back | - | 200 mm |
| Extending distance, right side | 6" | 200 mm |
| Extending distance, left side | 6" | 200 mm |
| Extending distance, front | 16" | 450 mm |

In the US, floor protection must be constructed of a non-combustible material and installed to extend beneath the heater and 16" to the front and 6" to the sides of the fuel loading door and ash removal openings.

In Canada, to comply with CSA B365, Installation Code for Solid-Fuel-Burning Appliances and Equipment, any combustible covering beneath the appliance and/or within the area extending horizontally at least 450 mm (18 in) beyond the appliance on any side equipped with a door, and at least 200 mm (8 in) beyond the appliance on other sides, shall be protected by a continuous, durable, non-combustible pad that will provide ember protection. The 450 mm (18 in) ember protection required on any side with a door shall extend for the full width of the appliance plus the 200 mm (8 in) required on each side of the appliance without a door. Where an appliance is installed less than 200 mm (8 in) from a wall, the ember pad need only extend to the base of the wall. An ember pad shall not be placed on top of a carpet unless the pad is structurally supported to prevent displacement and distortion.

WARNING:

**NEVER DRAW COMBUSTION AIR FROM A WALL, FLOOR OR CEILING CAVITY OR FROM ANY ENCLOSED SPACE SUCH AS AN ATTIC OR GARAGE.
DO NOT INSTALL IN A SLEEPING ROOM.**

CAUTION:

**THE STRUCTURAL INTEGRITY OF THE MOBILE HOME FLOOR, WALL, AND CEILING/ROOF MUST BE MAINTAINED (I.E., DO NOT CUT THROUGH FLOOR JOIST, WALL STUD, CEILING TRUSS, ETC.)
DO NOT USE A GRATE TO ELEVATE FIRE -
BUILD FIRE DIRECTLY ON HEARTH.**

Note:

Acid Protection

If acid-washing the masonry around the stove, protect the stove surface with an acid-proof cover.

Fresh Air Inlet

Unless there is deemed to be sufficient ambient leakage of air into the room via doorways, windows and the like, a dedicated fresh air inlet will be needed. This inlet should have 2 square inches (1250 square mm) of free air space. This is particularly important where the room is well sealed, or where an extractor hood or ventilation system disturbs the natural air pressure. Such an inlet should not be on a wall that is usually subject to negative pressure from normal wind pattern. Avoid placing the inlet directly across the room from the stove, thus causing a cold air draft.

2.0 Operation

2.1 Before you start firing

For use with solid wood fuel only. Do not overfire, if heater or chimney connector glows you are overfiring. Inspect and clean chimney frequently. Under certain conditions of use creosote buildup may occur rapidly. Because of risk of smoke and flame spillage, operate only with door fully closed.

CAUTION:

Hot while in operation. Keep children, clothing and furniture away. Contact may cause skin burns.

DO NOT USE CHEMICALS OR FLUIDS TO START THE FIRE

DO NOT BURN GARBAGE OR FLAMMABLE FLUIDS

DO NOT USE A GRATE, ANDIRONS, OR OTHER WAYS OF ELEVATING THE FIRE - BUILD FIRE DIRECTLY ON HEARTH.

DO NOT USE GASOLINE, GASOLINE-TYPE LANTERN FUEL, KEROSENE, CHARCOAL LIGHTER OR FLUID OR SIMILAR LIQUIDS TO START OR FRESHEN UP A FIRE IN THIS HEATER. KEEP ALL SUCH LIQUIDS AWAY FROM THE HEATER WHILE IT IS IN USE

Do Not Burn:

- **Garbage;**
- **Lawn clippings or yard waste;**
- **Materials containing rubber, including tires;**
- **Materials containing plastic;**
- **Waste petroleum products, paints or paint thinners, or asphalt products;**
- **Materials containing asbestos;**
- **Construction or demolition debris;**
- **Railroad ties or pressure-treated wood;**
- **Manure or animal remains;**
- **Salt water driftwood or other previously salt-water saturated materials;**
- **Unseasoned wood; or**
- **Paper products, cardboard, plywood, or particleboard. The prohibition against burning these materials does not prohibit the use of fire starters made from paper, cardboard, saw dust, wax and similar substances for the purpose of starting a fire in an affected wood heater.**

Burning these materials may result in release of toxic fumes or render the heater ineffective and cause smoke.

Choosing your fuel

All types of natural wood can be burned on your stove, but they must be well-seasoned and dry. Once the wood is cut to length, it should be split down middle - to suit the dimensions given below - to allow moisture to evaporate. Cut the wood to a length of max 12 inches (30 cm) and approx. 3 to 3,5 inches (7-8 cm) in section. If you can weigh your wood, aim for around 2 lbs. For correct combustion and heat output, wood fuel should contain no more than 20% moisture; this can easily be checked by using the Morsø Moisture Meter (part # 62929900).

To naturally season wood fuel, stack and store it under cover in an airy location where fresh air can move through each piece. Some soft woods may take as little as one good summer to season whereas harder woods such as oak, maple, and elm may require seasoning up to 18 months. Avoid overly dry wood that is gray in color as under certain conditions it can cause performance problems, such as back-puffing and sluggishness. Well seasoned wood will be light to hold and will show signs of cracking from the center-out in the ends. If your wood spits or sizzles when burnt, and your stove's door glass persistently mists up, your wood is not properly seasoned. Never use drift wood (from the sea), whose salt content may cause corrosion, nor construction wood that may have been impregnated with chemicals.

To optimize efficiency:

Burning wet wood has a negative impact on efficiency

The efficiency of the wood heater is primarily influenced by its location. The stove is mainly designed to heat the room where it is installed.

Main Living Area. Placing the wood heater in the main living area maximizes efficiency, as it directly heats the space where most time is spent.

Basement. Installing the heater in the basement can be less efficient if heat does not adequately circulate to upper levels. Proper insulation and airflow management are crucial for effective heating.

Outdoors in Sub-Freezing Temperatures. Using the wood heater outdoors in very cold conditions significantly reduces efficiency. The heater must work harder to maintain warmth, leading to increased fuel consumption and less effective heating.

CAUTION Do not place fuel within the installation clearances for the stove or within the space required for loading fuel and ash removal.

Starting the First Fire

The initial fire should be small, so that the stove paint can cure and the main plates of the stove can settle into position. Some fumes will be given off by the paint. Ventilate the room during this phase.

The setting of the air control, lighting techniques and loading intervals will depend on chimney draft, the fuel used, the heat required and so on. Some basic techniques are outlined below.

IMPORTANT

To ensure proper combustion and avoid blocking the airflow, always keep the fuel load below the stainless-steel secondary air supply box located on the back wall of the firebox. The space in front and above the air supply box is reserved solely for volatile gas combustion.

In principle

Your stove is equipped with Primary and Secondary air inlets.

Primary Air is controlled using the lever situated over the door. Moving the control lever to right position will open the air inlet and will allow a supply of preheated air to enter the firebox via the 'airwash' system situated inside the stove and above the glass.

The secondary air is injected into the flue gases above the fire resulting in a cleaner, more efficient combustion process. The supply of secondary air is fixed open and is not adjustable.

This wood heater has a manufacturer-set minimum low burn rate that must not be altered. It is against federal regulations to alter this setting or otherwise operate this wood heater in a manner inconsistent with operating instructions in this manual.

2.2 Lighting and loading intervals

When first lighting the stove, a large volume of air is needed. When the stove is cold, you should leave the door open an inch or two for the first few minutes and open the primary air supply completely. While the door is open, do not leave the stove unattended.

To form a reasonable bed of ash on the floor of the stove, you should use 2-4 pounds of dry kindling at the initial lighting. If possible, maintain a 1-1.5 inch (2-3 cm) layer of ash on the floor of the combustion chamber for added insulation.

1. We recommend using the "top-down" method to light your wood-burning stove. It is the most environmentally-friendly method of lighting. Use two firelighters and approx. 2-4 lbs of dry kindling sticks to quickly create a glowing layer of wood. Place the firelighters directly under the top layer of kindling sticks. This minimizes soot formation on the glass. Soot formation on the glass is often caused by too vigorous burning in contact with cold surfaces. If you avoid the formation of soot when lighting the fire and build up a layer of hot embers, you will have minimal soot formation when getting the fire burning again later.

2. The air supply must be fully open. (air controller handle moved completely to the right)

3. Light the fire.

4. After lighting, partially close the door, leaving it open an inch or two to allow in plenty of combustion air.

5. When the chimney is warm after about 5-10 minutes, the door should be closed. A suitable layer of ember will be formed after about 15-20 minutes.

6. When ready to reload, use a poker to spread the embers across the firebox floor, bringing plenty towards the front of the stove.

7. Lay two pieces of wood onto the embers. Leave half an inch or more between each piece.

8. Close the door. Leave the primary air supply fully open. If it does not light, leave the door slightly ajar to allow the necessary amount of air in to ignite the wood. Close the door again once the wood has kindled.

9. After a few minutes, adjust the primary air supply to suit your heating requirements.

Make sure that there is always enough air to sustain clear, enduring flames when you reduce the amount of combustion air, and afterwards.

If using the minimum low burn rate (air controller handle moved completely to the left) allow the fire to establish properly, by burning at medium burn rate for about 15 minutes beforehand. Move the air controller handle from closed position to a position mid range to achieve a medium burn rate.

10. For refueling, add a layer of wood while there are still plenty of live embers, repeat steps 6-9.

We recommend using fuel load with a weight of 3 lbs (2 pieces) and up to 6 lbs (5 pieces).

Always keep the fuel load beneath the secondary stainless-steel air box. The space in front and above the air box is reserved for volatile gas combustion only.

Do not for any reason attempt to increase the firing of your heater by altering the air control adjustment range outlined in these directions.

Warning: Fireplace stoves must never be left unattended with the door open.

If the door is left partly open, gas and flame may be drawn out of the fireplace stove opening, creating risks from both fire and smoke. We recommend that you fit a smoke detector in the room where the stove is installed.

DO NOT OVERFIRE THIS HEATER. Overfiring may cause a house fire, or can result in permanent damage to the stove. If any part of the stove glows, you are overfiring.

The maximum recommended weight of wood fuel per load is 6lbs (5 split logs).

Under normal firing, the average flue temperature in the stove pipe, measured 20 cm above the stove, is approx. 300° C (550°F). The maximum flue temperature in the stove pipe must not exceed 450° C (750°F). If the flue temperature exceeds 450°C (750°F), it is considered as over firing and may cause premature wear and tear of the stove.

To help gauge the correct running temperature of your stove, we recommend you use the Morsø Flue Gas Thermometer (part # 62901200). The Flue Gas Thermometer magnetically attaches onto the stove pipe approx 20 cm (8") above the stove's top plate and measures the surface temperature of the stove pipe. Please see your authorized Morsø Dealer for availability.

Draft conditions

If smoke or fumes come out of your stove when lighting up and reloading, or if the fire simply will not respond, a poor draft is almost certainly to blame. (In a very few cases, there may be insufficient fresh air getting into the room - see installation advice above). Take advice from your stove supplier on how best to upgrade your flue system to improve draft.

Rules of woodburning

If you want less heat, put fewer logs on the stove and reduce the amount of air. It is still important to maintain a good layer of embers.

Less heat - less wood - less air

Greater heat - more wood - more air

Soot deposits will settle on the glass if the stove is run too slowly or if your wood is not well seasoned.

We would strongly recommend that you do not leave your stove alit at night. It harms the environment, and constitutes very poor use of the wood, as the gases in the wood do not ignite at the low temperature, but settle as soot (unburned gases) in the chimney and stove instead.

Carbon monoxide detectors

It is required in some jurisdictions to install smoke and carbon monoxide detectors where heaters are installed. Install at least one smoke detector on each floor of your home to ensure your safety. It should be located away from the wood appliance and close to the sleeping areas. Locating a smoke detector too close to a wood appliance can cause the smoke detector alarm to sound if a puff of smoke is emitted while the wood appliance door is open during reloading. Follow the smoke detector manufacturers placement, installation, and maintenance instructions

Average CO emission measured in the flue during combustion was 0.8 gr/min.

3.0 Maintenance

When performing maintenance on your stove, always protect yourself, using safety goggles and gloves.

3.1 Exterior Maintenance

The stove surface is painted with heat-resistant Senotherm paint. It is best kept clean by vacuuming with a soft brush attachment or by wiping with a lint-free cloth.

Over a period of time, the painted surface may become slightly grey. A can of Morsø touch-up spray paint should be available from your stove supplier. This can be applied - in accordance with the instructions - in just a few minutes. When first firing after touching up, the stove will give off a slight smell as the paint cures. Make sure to ventilate the room well during this phase.

3.2 Internal maintenance

Glass

If the stove is generally run at the correct temperatures, there should be little or no dirt on the glass. If dirt does settle during lighting, most will burn off as temperatures increase. For heavier deposits that will not burn off, use morsø glass cleaner, applied when the glass is cold, in accordance with the instructions. Never use abrasive cleaners on the glass surface.

Reasons for dirty glass

- Fuel too wet
- Logs too large or not split
- Combustion temperatures too low

Do not clean the glass while hot
Replace broken glass immediately.
Do not operate your stove if the glass in the door is damaged.

If you need to replace the glass, it should be replaced with the high temperature ceramic glass supplied by Morsø, contact your Morsø dealer.

Installing the glass

Never install the glass when the stove is in function.

Ceramic glass replacement

Ceramic glass cannot be recycled because it has a higher melting point than ordinary glass. If ceramic glass is mixed with ordinary glass, the raw material is spoiled, and the reclaiming process may be halted. Take care that the ovenproof glass does not end up among ordinary recycled waste. That will be a great benefit to the environment.

Note: Should be handed in to a recycling station as ceramic glass.

1. When you open the door, you will find two hinge pins, one in each hinge. Remove the two hinge pins, lift the door off the hinges and place it face down on a sheet of cardboard or other nonabrasive fabric.
2. Unscrew the 4 bolts that secure the glass. (In the event that a bolt sheers off when being unscrewed, remove the remaining body of the bolt by drilling down its centre with 1/8 inch high speed steel drill bit. Smaller drill bits may be successful, but do not use a larger bit. Make sure the bit stays away from the edges of the bolt - this may damage the thread in the cast iron).
3. Remove the old ceramic gaskets and clean up the surface underneath with wire wool or emery paper to remove loose particles.
4. Place the new gasket material in position around the perimeter of the window area, making sure to pinch them to the length in such a way that they make a continuous seal. Leave no gaps.
5. Place the new glass in position on the strips and screw home the fresh bolts and fitting by hand.
6. Finally, give each of the bolts an extra half turn or so. The glass should held tight enough by that cleaning will not dislodge it. Do not over-tighten the bolts as this may put excessive pressure on the glass, resulting in cracking - important!

To reduce the risk of breaking the glass, avoid striking the glass or slamming the door.

Internal service parts

The flame-path equipment - consisting of the ashpan, grate, firebricks, Cast iron fire plates, glass, baffle and flue collar - are subject to the extremes of heat produced by the fire. From time to time, one or other of these parts may need replacing as a matter of routine maintenance.

NOTE: The flame-path equipment, the ceramic rope and the paint finish are not covered by guarantee.

All of these service parts can be bought from your morsø dealer, and we recommend that damaged parts are replaced as soon as possible to avoid collateral damage.

Should the baffle be distorted by an overfire, the stove will still function, although its efficiency may be compromised. Replace it as soon as possible.

Reasons for fast internal wear and tear

Persistent heavy firing

Soot and ashes left to accumulate

Gasket

The gasket around the perimeter of the door may harden over a period of time. It should be replaced if it becomes difficult to close the doors or if air starts to leak in around the perimeter of the doors, causing the fire to become a little less controllable. A morsø rope gasket kit is available from your stove supplier.

3.3 Cleaning the Stove and the Flue

Check for soot above the baffle plate and around the flue outlet every month or so to start with. If the stove suddenly becomes sluggish, check for a soot fall around the flue collar or in the flue/chimney.

The chimney and chimney connector should be inspected at least once every two months during the heating season to determine if a creosote buildup has occurred. If creosote has accumulated, it should be removed to reduce the risk of a chimney fire.

Clean the flue/chimney - all the way from the stove to the flue terminal point above the house. A good routine is to clean the flue after each heating season in any case, and inspect prior to the season to ensure that bird's nests or other blockages have not occurred during the off season.

Ash disposal

Empty the ashpan on a daily basis or as needed. Ash allowed to build up towards the underside of the grate will trap heat and could cause premature failure of the grate.

Empty the ashpan according to this procedure:

Open the front door, and use a shovel or poker to stir excess ash through the ash slots in the grate down into the ash pan. Take out the ash pan, making sure to keep it level to avoid spilling ash.

Dispose the ash in a metal container with a tight fitting lid.

The closed container of ashes should be placed on a noncombustible floor or on the ground, well away from all combustible materials, pending final disposal. If the ashes are disposed of by burial in soil or otherwise locally dispersed, they should be retained in the closed container until all cinders have thoroughly cooled.

Return the ash pan to its original position in the stove, and close the door.

CAUTION:

Never empty a stove in operation.

Never use your household or shop vacuum cleaner to remove ash from the stove; always remove and dispose of the ash properly.

Creosote - formation and need for removal

When wood is burned slowly, it produces tar and other organic vapors, which combine with expelled moisture to form creosote. The creosote vapors condense in the relatively cool chimney flue of a slow-burning fire. As a result, creosote residue accumulates on the flue lining. When ignited this creosote makes an extremely hot fire. When burning wood, the chimney and chimney connector should be inspected at least once every two months during the heating season to determine if a creosote buildup has occurred. If creosote has accumulated, it should be removed to reduce the risk of a chimney fire.

Chimney sweeping

Inspect the system regularly during the heating season as part of a regular maintenance schedule. To inspect the chimney, let the stove cool completely. Then, using a mirror, sight up through the flue collar into the chimney flue. If you cannot inspect the flue system in this fashion, the stove must be disconnected to provide better viewing access.

Clean the chimney using a brush the same size and shape as the flue liner. Run the brush up and down the liner, causing any deposits to fall to the bottom of the chimney where they can be removed through the clean-out door.

Clean the chimney connector disconnecting the sections, taking them outside, and removing any deposits with a stiff wire brush. Reinstall the connector sections after cleaning, being sure to secure the joints between individual sections with sheet metal screws. If you cannot inspect or clean the chimney yourself, contact your local Morsø Dealer or a professional chimney sweep.

If you do experience a chimney fire, act promptly and:

1. Close the air control.
2. Get everyone out of the house.
3. Call the Fire Department.

Annual maintenance

Before the heating season, perform a thorough cleaning, inspection and repair: Thoroughly clean the chimney and chimney connector. Inspect the chimney for damage and deterioration. Replace weak sections of prefabricated chimney. Have a mason make repairs to a masonry chimney. Inspect the chimney connector and replace any damaged sections. Check gasketing for wear or compression, and replace if necessary. Check the glass for cracking; replace if needed. Check door and handle for tightness. Adjust if needed.

How to clean the inside parts of Morsø 6100

When cleaning the inside parts of the stove in connection with the annual visits from your local chimney sweep we recommend that you remove the inside parts from the fire chamber. Please be careful as the vermiculite parts are porous. Cleaning of the stove must be done when the stove is cold.

ALWAYS USE ORIGINAL MORSØ SPAREPARTS

1. The bottom baffle is lifted up a bit and held in that position. Loosen the side bricks.

2. Tip the side bricks and remove them from the fire chamber.

3. Tip the other side brick and remove it from the fire chamber.

4. When the side bricks are removed the bottom baffle is lowered and lifted out of the fire chamber.

5. The upper baffle is removed from the brackets and lifted out of the fire chamber.

3.4 Leaving the stove for extended periods

Important:

If the stove is to be left unused for any period of time, clean it out thoroughly and leave the air control slightly open to allow airflow. Make sure that the flue does not allow rainwater to come anywhere near the stove; install a chimney cap, but do not block off the flue completely.

These measures should ensure there is a slight movement of air through the stove, and that the body of the stove remains dry, right into the corners.

Any ash left within an unfired stove can attract moisture like blotting paper. If moisture is allowed to settle within the stove, rust will form. Rust expands as it takes a grip. This can lead to undue pressure on the stove joints, and this in turn may result in damage to the stove.

NOTE: It is best to thoroughly clean the stove after the heating season has concluded. Adding a dessicant, such as kitter litter, into the ash pan helps absorb moisture during the summer months. Be sure to remove this prior to the heating season.

We hope you have many years of carefree warmth in its company. Some initial experimentation with loading and running techniques will decide your normal routine. If you have any problems after this short learning phase, please refer to your stove dealer. Should they be unable to help for any reason, please contact us in writing at the address on the front of this publication.

Warranty

Product Registration

MORSØ 10 YEAR WARRANTY CERTIFICATE

Behind every Morsø stove is more than 160 years of dedicated stove design and manufacturing experience. Quality control has always been at the heart of the production process and detailed measures have been put into place at all key stages of the build. Accordingly, provided that the stove has been supplied by an authorised Morsø dealer, Morsø will offer a 10-Year Manufacturers warranty against manufacturing defect to any of the main exterior body parts of its stoves.

Warranty Information

Limited Warranty

Morsø warrants that the wood stove is free from defects in material and workmanship under normal use and service, subject to the terms and conditions outlined below. The warranty period is valid for 10 years from the date of purchase.

What Is Covered:

This warranty covers replacement or repair of parts that are defective due to materials or workmanship.

What Is Not Covered:

The warranty does not cover damage resulting from:

- Improper installation or use not in accordance with the owner's manual, including in relation to applicable public regulations and Morsø's assembly and firing instructions.
- Damage caused by overheating and firing with the wrong fuel.
- Normal wear and tear, such as discoloration of surfaces. Wear parts, i.e. parts that wear out during normal use (e.g. smoke deflector plates, grates, refractory stones/plates as well as glass and sealing materials). The provisions of the Sales Act on liability for defects apply to these parts.
- Repairs or modifications not authorized by Morsø.
- In the event of lack of maintenance and breakage of the product's surface treatment, corrosion can occur. The warranty does not cover such occurrences. The provisions of the Sales Act on liability for defects also apply here.
- Malfunctions caused by local conditions, draft problems or damage/faults to the chimney.

Void Conditions:

This warranty is void if this wood heater is not installed, operated, and maintained in accordance with the instructions provided in this manual or if it is used to burn materials for which it is not certified by the EPA. The warranty is also void if any unauthorized modifications are made to the heater.

How To Exercise Your Warranty

To make a warranty claim, follow these steps:

1. Contact Morsø Customer Service via email at **info@morsoe.com** or by phone at **+45 96691900**
2. Provide the following information:
 - Proof of purchase (receipt or invoice).
 - Model number and serial number of the stove.
 - A detailed description of the issue, including photographs if possible
3. Morsø will evaluate the claim and, if approved, provide instructions for repair, replacement, or service.

For detailed warranty terms, please visit:

Phone Number

IMPORTANT!

How to heat safely for the environment and yourself!

- **Use only dry wood**

Use only dry (max. 20% moisture content) and untreated wood. The fuel must be split and 8 - 12 cm thick.

- **Light**

Light with dry kindling (use 1 - 2 kg). Leave the door ajar and stay close to the stove during the lighting phase.

- **Good layer of embers**

Be certain to have a good layer of embers before refilling. The wood should light within 2 minutes. If the logs do not ignite it may, in an extreme case, cause the flue gases to ignite which may pose a risk to material damage or personal injury.

- **Refuelling**

When refuelling use 2 - 3 pieces of wood - no more than 2 - 2.5 kg.

- **Ensure adequate air**

i.e. clear and yellow flames.

- **Never burn overnight**

Enjoy your new Morsø stove!

We congratulate you on your choice of a Morsø stove. Morsø has been producing some of the world's best stoves since 1853. If you follow this installation- and operating instruction carefully, we can assure you many years of warmth and pleasure.

Read this entire manual before you install and use your new room heater. If this room heater is not properly installed, a house fire may result. To reduce the risk of fire, follow the installation instructions. Failure to follow instructions may result in property damage, bodily injury, or even death.

Do not tamper with or alter the original construction of the wood stove. Modifications can lead to serious safety hazards, including fire, carbon monoxide poisoning, and voiding of the warranty. Always use the stove as designed and follow the manufacturer's instructions.

Contact local building officials about restrictions and installation inspection requirements in your area.

Save these instructions

Optional Accessories

A wide range of accessories (such as handling gloves, fireside tools, glass cleaner and heat-proof paint) are available for use with your Morsø stove. They help with day-to-day running and maintenance. Contact your Morsø dealer for more information.

The Morsø 6100 B non-catalytic wood heater series has been certified by PFS TECO. The test standards are ANSI/UL-1482-2011 (R2015) for the United States and ULC S627-00 for Canada.

The stove is listed for burning wood only. Do not burn other fuels.

U.S. ENVIRONMENTAL PROTECTION AGENCY. Certified to comply with 2020 particulate emission standards using crib wood.

Average particulate emission using EPA Method 28 crib wood test method is 1.8 g/h. Under specific test conditions this heater has been shown to deliver heat at rates ranging from 11,892 to 19,067 Btu/hr. This appliance was determined to have an average higher heating efficiency value of 74% (higher heating value) when tested in accordance with CSA B415.1

This wood heater needs periodic inspection and repair for proper operation. It is against federal regulations to operate this wood heater in a manner inconsistent with operating instructions in this manual.

Cast iron

Cast iron is a live material. There are no two ovens that are identical. This is partly due to the tolerances of the casting process, partly because the ovens are a work of craftsmanship. Minor unevennesses may also occur in the cast iron surface.

1.0 Installation of your Morsø stove

The installation must conform standard CAN/CSA-B365, Installation Code For Solid-Fuel-Burning Appliances and Equipment

Make-shift compromises during installation can have consequences, the Installation of the woodburning stoves must be safe and legal.

If your Morsø stove is not installed correctly, it may cause a house fire. To reduce the risk of fire, the installation instructions must be followed carefully. Contact the local building officials about restrictions and installation inspection in your area

Do not install in any fireplace.

Before you start installing your stove, make sure that:

- The stove and chimney connection are placed far enough from combustible materials to meet all clearance requirements.
- The floor protection must be adequate and must be made correctly according to the requirements.

All necessary approvals are needed from the local building officials.

The data plate, which is located on the back of the stove, provides information regarding safety testing information, name of certified testing laboratory, and installation requirements.

Installation requirements vary in different districts, and the local building officials have the final authorization to approve your installation. You should discuss the installation with them before beginning. Please ask your dealer for further information.

Do not connect to any air distribution duct or system.

Important: If the installation instructions are not followed carefully, it may cause dangerous situations like chimney - and house fires. Follow the instructions carefully and do not deviate from them as it may cause injuries to people or property.

1.1 Checking loose parts in the stove

After unpacking, check that the fire bricks are firmly in position and have not shifted in transit. Check also that the air control works freely.

Before starting the initial fire, make sure that the baffles is placed correctly.

Standard Accessories

A Morsø glove and ceramic flue connection gasket are standard accessories that usually can be found in the ashpan or firebox area.

1.2 The chimney / flue system

Note that the flue system must be independently secured and must not rely on the stove for support.

The stove must not be connected to a chimney flue serving any other appliance. (Several flues may run up a single chimney stack; use one flueway per appliance).

Use a code-approved masonry chimney with a flue liner or listed type HT factory-built chimney

High Temperature (H.T.) Chimney Standard UL-103-1985 (2100° F.) or a code-approved masonry chimney with flue liner for the USA, and High Temperature (650°C) Standard ULC S-629 for Canada.

The internal dimensions of the chimney connector and chimney must not be less than 6 inches diameter (or equivalent cross section), and should not be significantly larger than this. Too large a section will tend to allow the flue gases to cool excessively, causing sluggishness or unpredictability in the stove's performance.

We recommend the length of the chimney system should be at least 16 feet (not required) above the stove in normal domestic situations, measured from the flue collar to the top of the chimney.

Local conditions like for example - roof constructions, large trees nearby and high altitude, may influence the chimney draft and height. Therefore, contact the local professional chimney sweep or your Morsø dealer.

Typical Factory-Built or Masonry Chimney Installations

1.3 Flue Connection

The stove is supplied from the factory with a round blanking plate blocking off the top and rear flue exit (behind the rear shield plate).

Do not install the chimney directly at the outlet of the appliance.

A chimney connector (flue pipe) is required unless the appliance is specifically approved for that type of installation. A chimney connector are placed in the firebox area.

Use a 24 MSG black or blue chimney connector or listed double wall chimney connector. Refer to local codes and the chimney manufacturer's instructions for precautions required for passing a chimney through a combustible wall or ceiling. Remember to secure the chimney connector with a minimum of three screws to the product and to each adjoining section.

The collar can be fitted to the rear outlet. Simply knock out the round panel on the rear heat shield plate to reveal the cast iron plate. Untwist the blanking plate and the flue collar and swap their positions. Re-secure by pushing down and tighten the enclosed screws. Position the stove and connect to the flue system.

Wear gloves and protective eyewear when drilling, cutting or joining sections of chimney connector

1.4 Connection to the existing chimney

A chimney connector is the double-wall or single-wall pipe that connects the stove to the chimney. The chimney itself is the masonry or prefabricated structure that encloses the flue. Chimney connectors are used only to connect the stove to the chimney.

Double-wall connectors must be tested and listed for use with solid-fuel burning appliances. Single-wall connectors should be made of 24 gauge or heavier gauge steel. Do not use galvanized connector; it cannot withstand the high-temperatures that smoke and exhaust gases can reach, and may release toxic fumes under high heat. The connector must be 6 inches (150mm) in diameter.

If possible, do not pass the chimney connector through a combustible wall or ceiling. If passage through a combustible wall is unavoidable, refer to the sections on Wall Pass-Throughs. Do not pass the connector through an attic, a closet or similar concealed space when installing the chimney connectors.

It is important to keep the flue gases moving smoothly in the right direction. Do not vent into a large void at this location; rather form one continuous section all the way up. Use mild bends (e.g. 45° vs. 90°) rather than sharp angles where a change of direction is required. All parts of the venting must be accessible for cleaning purposes.

In horizontal runs of chimney, maintain a distance of 18 inches from the ceiling. Keep it as short and direct as possible, with no more than two 90 degree turns. Slope horizontal runs of connector upward 1/4 inch per foot (20 mm per metre) going from the stove toward the chimney. The recommended maximum length of a horizontal run is 3 feet (1 metre), and the total length should be no longer than 8 feet (2.5 metres).

Information on assembling and installing connectors is provided by the manufacturer's instructions exactly as you assemble the connector and attach it to the stove and chimney.

Be sure the installed stove and chimney connector are correct distances from near by combustible materials. See the clearance paragraph page 8.

The chimney and Chimney connector must be in good condition and kept clean.

Where passage through a wall or partition of combustible construction is desired, the installation shall conform to CAN/CSA-B365.

Be sure that all connectors between the chimney parts and the heater are sealed properly so the chimney is airtight from the heater to the chimney outlet.

Chimney Connector Systems and Clearances from Combustible Walls for Residential Heating Appliances

A Minimum 3.5-in thick brick masonry all framed into combustible wall with a minimum of 12-in brick separation from clay liner to combustibles. The fireclay liner shall run from outer surface of brick wall to, but not beyond, the inner surface of chimney flue liner and shall be firmly cemented in place.

B Solid-insulated, listed factory-built chimney length of the same inside diameter as the chimney connector and having 1-in. or more of insulation with a minimum 9-in. air space between the outer wall of the chimney length and combustibles.

C Sheet steel chimney connector, minimum 24 gauge in thickness, with a ventilated thimble, minimum 24 gauge in thickness, having two 1-in. air channels, separated from combustibles by a minimum of 6-in. of glass fiber insulation. Opening shall be covered, and thimble supported with a sheet steel support, minimum 24 gauge in thickness.

D Solid insulated, listed factory-built chimney length with an inside diameter 2-in. larger than the chimney connector and having 1-in. or more of insulation, serving as a pass-through for a single wall sheet steel chimney connector of minimum 24 gauge thickness, with a minimum 2-in. air space between the outer wall of chimney section and combustibles. Minimum length of chimney section shall be 12-in. chimney section spaced 1-in. away from connector using sheet steel support plates on both ends of chimney section. Opening shall be covered, and chimney section supported on both sides with sheet steel supports securely fastened to wall surfaces of minimum 24 gauge thickness. Fasteners used to secure chimney section shall not penetrate chimney flue liner.

1.5 Positioning the stove

Distance to walls and lintel

When the stove is positioned near combustible materials, observe all current local and national building regulations with regards to clearances. Whatever regulations apply to your area, do not in any case install the stove within 8 inches of combustible materials around the sides or 16 inches above the top of the stove (fireplace installations require greater clearances above the stove - see below in the clearance chart). These distances may need to be increased if the materials are sensitive to heat. Note also that wall paper and other decorative materials may become detached with the effects of heat and care should be taken to ensure that they do not fall towards the stove in such an event.

This heater heaters meets the requirements of CAN/ULC-S627 and are suitable for installation on a combustible floor and do not require radiant floor protection.

Please read below regarding floor protection from falling embers.

When the stove is positioned near non-combustible materials, a gap of 4 inches or more is recommended for cleaning purposes and to ensure that heat circulates around the stove and out into the room.

If using rear exit, the floor protection must extend beneath the chimney connector and 2 inches beyond each side.

FLOOR PROTECTION REQUIREMENTS

ALCOVE INSTALLATION

FLOOR PROTECTOR MUST BE NON-COMBUSTIBLE MATERIAL. IT MUST EXTEND BENEATH HEATER, AND TO THE FRONT / SIDES / REAR AS INDICATED.

Maximum alcove depth must be no more than 32" (813mm)

MEASUREMENTS IN INCHES APPLY FOR US AND THE MEASUREMENTS IN MM (PARENTHESES) APPLY FOR CANADA.

| CLEARANCE REQUIREMENTS | ALCOVE INSTALLATION DOUBLEWALL CONNECTOR |
|----------------------------|---|
| A. Sidewall to unit | 12" (305 mm) |
| B. Backwall to unit | 3" (76 mm) |
| C. Cornerwall to unit | - |
| D. Sidewall to connector | 17" (432 mm) |
| E. Backwall to connector | 7.5" (190 mm) |
| F. Cornerwall to connector | - |
| G. Unit to ceiling | 24.5" (622 mm) |
| H. Floor to ceiling | 54" (1372 mm) |

Distance to furniture

The recommended minimum distance from stove to furniture is 30 inches. Note that some furniture is more easily affected by heat and may need to be moved to a greater distance. This is your responsibility.

In addition other combustible materials, away from the stove. In general, a distance of 30 inches must be maintained between the stove and moveable combustible item such as drying clothes, newspapers, firewood etc.

| FLOOR PROTECTION REQUIREMENTS | NON-COMBUSTIBLE MATERIALS BENEATH STOVE | |
|--------------------------------|--|--------|
| | USA | CANADA |
| Extending distance, back | - | 200 mm |
| Extending distance, right side | 6" | 200 mm |
| Extending distance, left side | 6" | 200 mm |
| Extending distance, front | 16" | 450 mm |

In the US, floor protection must be constructed of a non-combustible material and installed to extend beneath the heater and 16" to the front and 6" to the sides of the fuel loading door and ash removal openings.

In Canada, to comply with CSA B365, Installation Code for Solid-Fuel-Burning Appliances and Equipment, any combustible covering beneath the appliance and/or within the area extending horizontally at least 450 mm (18 in) beyond the appliance on any side equipped with a door, and at least 200 mm (8 in) beyond the appliance on other sides, shall be protected by a continuous, durable, non-combustible pad that will provide ember protection. The 450 mm (18 in) ember protection required on any side with a door shall extend for the full width of the appliance plus the 200 mm (8 in) required on each side of the appliance without a door. Where an appliance is installed less than 200 mm (8 in) from a wall, the ember pad need only extend to the base of the wall. An ember pad shall not be placed on top of a carpet unless the pad is structurally supported to prevent displacement and distortion.

1.6 Mobile Home Installation

CANADA: DO NOT INSTALL IN A TRANSPORTABLE BUILDING / MOBILE HOME **Mobile home installation is only applicable for USA**

The Morsø 6100 can be installed in a mobile home if equipped with an outside combustion air kit, a terminal cap with a spark arrestor, and if it meets the following installation requirements:

- The stove must be secured to the mobile home structure by bolting through the hearth pad and into flooring.
- The stove must be installed with a listed Type HT chimney connector, HT Chimney, and terminal cap with spark arrestor. Never use a single wall connector (stovepipe) in a mobile home installation.
- Floor protection requirements in section 1.5 must be followed precisely.
- In Canada, this appliance must be connected to a 6" (152 mm) factory-built chimney conforming to CAN/ULC-629M, STANDARD FOR FACTORY BUILT CHIMNEYS. Floor protection as referenced in section 1.5 must be followed, as well as use of Canadian Floor Protector.
- Follow the chimney and chimney connector manufacturer's instructions when installing the flue system for use in a mobile home.
- Outside air kit should be installed according to installation guide in the kit.
- Intake air piping can be installed through the floor into a vented crawl space or through the wall of the residence to obtain outside air.
- Install in accordance with 24 CFR, Part 3280 (HUD).
- NOTE: Top sections of chimney must be removable to allow maximum clearance of 13.5' from ground level for transportation purposes.

WARNING:

NEVER DRAW COMBUSTION AIR FROM A WALL, FLOOR OR CEILING CAVITY OR FROM ANY ENCLOSED SPACE SUCH AS AN ATTIC OR GARAGE.

DO NOT INSTALL IN A SLEEPING ROOM.

CAUTION:

THE STRUCTURAL INTEGRITY OF THE MOBILE HOME FLOOR, WALL, AND CEILING/ROOF MUST BE MAINTAINED (I.E., DO NOT CUT THROUGH FLOOR JOIST, WALL STUD, CEILING TRUSS, ETC.)

DO NOT USE A GRATE TO ELEVATE FIRE - BUILD FIRE DIRECTLY ON HEARTH.

Note:

Acid Protection

If acid-washing the masonry around the stove, protect the stove surface with an acid-proof cover.

Fresh Air Inlet

Unless there is deemed to be sufficient ambient leakage of air into the room via doorways, windows and the like, a dedicated fresh air inlet will be needed. This inlet should have 2 square inches (1250 square mm) of free air space. This is particularly important where the room is well sealed, or where an extractor hood or ventilation system disturbs the natural air pressure. Such an inlet should not be on a wall that is usually subject to negative pressure from normal wind pattern. Avoid placing the inlet directly across the room from the stove, thus causing a cold air draft.

2.0 Operation

2.1 Before you start firing

For use with solid wood fuel only. Do not overfire, if heater or chimney connector glows you are overfiring. Inspect and clean chimney frequently. Under certain conditions of use creosote buildup may occur rapidly. Because of risk of smoke and flame spillage, operate only with door fully closed.

CAUTION:

Hot while in operation. Keep children, clothing and furniture away. Contact may cause skin burns.

DO NOT USE CHEMICALS OR FLUIDS TO START THE FIRE

DO NOT BURN GARBAGE OR FLAMMABLE FLUIDS

DO NOT USE A GRATE, ANDIRONS, OR OTHER WAYS OF ELEVATING THE FIRE - BUILD FIRE DIRECTLY ON HEARTH.

DO NOT USE GASOLINE, GASOLINE-TYPE LANTERN FUEL, KEROSENE, CHARCOAL LIGHTER OR FLUID OR SIMILAR LIQUIDS TO START OR FRESHEN UP A FIRE IN THIS HEATER. KEEP ALL SUCH LIQUIDS AWAY FROM THE HEATER WHILE IT IS IN USE

Do Not Burn:

- **Garbage;**
- **Lawn clippings or yard waste;**
- **Materials containing rubber, including tires;**
- **Materials containing plastic;**
- **Waste petroleum products, paints or paint thinners, or asphalt products;**
- **Materials containing asbestos;**
- **Construction or demolition debris;**
- **Railroad ties or pressure-treated wood;**
- **Manure or animal remains;**
- **Salt water driftwood or other previously salt-water saturated materials;**
- **Unseasoned wood; or**
- **Paper products, cardboard, plywood, or particleboard. The prohibition against burning these materials does not prohibit the use of fire starters made from paper, cardboard, saw dust, wax and similar substances for the purpose of starting a fire in an affected wood heater.**

Burning these materials may result in release of toxic fumes or render the heater ineffective and cause smoke.

Choosing your fuel

All types of natural wood can be burned on your stove, but they must be well-seasoned and dry. Once the wood is cut to length, it should be split down middle - to suit the dimensions given below - to allow moisture to evaporate. Cut the wood to a length of max 12 inches (30 cm) and approx. 3 to 3,5 inches (7-8 cm) in section. If you can weigh your wood, aim for around 2 lbs. For correct combustion and heat output, wood fuel should contain no more than 20% moisture; this can easily be checked by using the Morsø Moisture Meter (part # 62929900).

To naturally season wood fuel, stack and store it under cover in an airy location where fresh air can move through each piece. Some soft woods may take as little as one good summer to season whereas harder woods such as oak, maple, and elm may require seasoning up to 18 months. Avoid overly dry wood that is gray in color as under certain conditions it can cause performance problems, such as back-puffing and sluggishness. Well seasoned wood will be light to hold and will show signs of cracking from the center-out in the ends. If your wood spits or sizzles when burnt, and your stove's door glass persistently mists up, your wood is not properly seasoned. Never use drift wood (from the sea), whose salt content may cause corrosion, nor construction wood that may have been impregnated with chemicals.

To optimize efficiency:

Burning wet wood has a negative impact on efficiency

The efficiency of the wood heater is primarily influenced by its location. The stove is mainly designed to heat the room where it is installed.

Main Living Area. Placing the wood heater in the main living area maximizes efficiency, as it directly heats the space where most time is spent.

Basement. Installing the heater in the basement can be less efficient if heat does not adequately circulate to upper levels. Proper insulation and airflow management are crucial for effective heating.

Outdoors in Sub-Freezing Temperatures. Using the wood heater outdoors in very cold conditions significantly reduces efficiency. The heater must work harder to maintain warmth, leading to increased fuel consumption and less effective heating.

CAUTION Do not place fuel within the installation clearances for the stove or within the space required for loading fuel and ash removal.

Starting the First Fire

The initial fire should be small, so that the stove paint can cure and the main plates of the stove can settle into position. Some fumes will be given off by the paint. Ventilate the room during this phase.

The setting of the air control, lighting techniques and loading intervals will depend on chimney draft, the fuel used, the heat required and so on. Some basic techniques are outlined below.

IMPORTANT

To ensure proper combustion and avoid blocking the airflow, always keep the fuel load below the stainless-steel secondary air supply box located on the back wall of the firebox. The space in front and above the air supply box is reserved solely for volatile gas combustion.

In principle

Your stove is equipped with Primary and Secondary air inlets.

Primary Air is controlled using the lever situated over the door. Moving the control lever to right position will open the air inlet and will allow a supply of preheated air to enter the firebox via the 'airwash' system situated inside the stove and above the glass.

The secondary air is injected into the flue gases above the fire resulting in a cleaner, more efficient combustion process. The supply of secondary air is fixed open and is not adjustable.

This wood heater has a manufacturer-set minimum low burn rate that must not be altered. It is against federal regulations to alter this setting or otherwise operate this wood heater in a manner inconsistent with operating instructions in this manual.

2.2 Lighting and loading intervals

When first lighting the stove, a large volume of air is needed. When the stove is cold, you should leave the door open an inch or two for the first few minutes and open the primary air supply completely. While the door is open, do not leave the stove unattended.

To form a reasonable bed of ash on the floor of the stove, you should use 2-4 pounds of dry kindling at the initial lighting. If possible, maintain a 1-1.5 inch (2-3 cm) layer of ash on the floor of the combustion chamber for added insulation.

1. We recommend using the "top-down" method to light your wood-burning stove. It is the most environmentally-friendly method of lighting. Use two firelighters and approx. 2-4 lbs of dry kindling sticks to quickly create a glowing layer of wood. Place the firelighters directly under the top layer of kindling sticks. This minimizes soot formation on the glass. Soot formation on the glass is often caused by too vigorous burning in contact with cold surfaces. If you avoid the formation of soot when lighting the fire and build up a layer of hot embers, you will have minimal soot formation when getting the fire burning again later.

2. The air supply must be fully open. (air controller handle moved completely to the right)

3. Light the fire.

4. After lighting, partially close the door, leaving it open an inch or two to allow in plenty of combustion air.

5. When the chimney is warm after about 5-10 minutes, the door should be closed. A suitable layer of ember will be formed after about 15-20 minutes.

6. When ready to reload, use a poker to spread the embers across the firebox floor, bringing plenty towards the front of the stove.

7. Lay two pieces of wood onto the embers. Leave half an inch or more between each piece.

8. Close the door. Leave the primary air supply fully open. If it does not light, leave the door slightly ajar to allow the necessary amount of air in to ignite the wood. Close the door again once the wood has kindled.

9. After a few minutes, adjust the primary air supply to suit your heating requirements.

Make sure that there is always enough air to sustain clear, enduring flames when you reduce the amount of combustion air, and afterwards.

If using the minimum low burn rate (air controller handle moved completely to the left) allow the fire to establish properly, by burning at medium burn rate for about 15 minutes beforehand. Move the air controller handle from closed position to a position mid range to achieve a medium burn rate.

10. For refueling, add a layer of wood while there are still plenty of live embers, repeat steps 6-9.

We recommend using fuel load with a weight of 3 lbs (2 pieces) and up to 6 lbs (5 pieces).

Always keep the fuel load beneath the secondary stainless-steel air box. The space in front and above the air box is reserved for volatile gas combustion only.

Do not for any reason attempt to increase the firing of your heater by altering the air control adjustment range outlined in these directions.

Warning: Fireplace stoves must never be left unattended with the door open.

If the door is left partly open, gas and flame may be drawn out of the fireplace stove opening, creating risks from both fire and smoke. We recommend that you fit a smoke detector in the room where the stove is installed.

DO NOT OVERFIRE THIS HEATER. Overfiring may cause a house fire, or can result in permanent damage to the stove. If any part of the stove glows, you are overfiring.

The maximum recommended weight of wood fuel per load is 6lbs (5 split logs).

Under normal firing, the average flue temperature in the stove pipe, measured 20 cm above the stove, is approx. 300° C (550°F). The maximum flue temperature in the stove pipe must not exceed 450° C (750°F). If the flue temperature exceeds 450°C (750°F), it is considered as over firing and may cause premature wear and tear of the stove.

To help gauge the correct running temperature of your stove, we recommend you use the Morsø Flue Gas Thermometer (part # 62901200). The Flue Gas Thermometer magnetically attaches onto the stove pipe approx 20 cm (8") above the stove's top plate and measures the surface temperature of the stove pipe. Please see your authorized Morsø Dealer for availability.

Draft conditions

If smoke or fumes come out of your stove when lighting up and reloading, or if the fire simply will not respond, a poor draft is almost certainly to blame. (In a very few cases, there may be insufficient fresh air getting into the room - see installation advice above). Take advice from your stove supplier on how best to upgrade your flue system to improve draft.

Rules of woodburning

If you want less heat, put fewer logs on the stove and reduce the amount of air. It is still important to maintain a good layer of embers.

Less heat - less wood - less air

Greater heat - more wood - more air

Soot deposits will settle on the glass if the stove is run too slowly or if your wood is not well seasoned.

We would strongly recommend that you do not leave your stove alit at night. It harms the environment, and constitutes very poor use of the wood, as the gases in the wood do not ignite at the low temperature, but settle as soot (unburned gases) in the chimney and stove instead.

Carbon monoxide detectors

It is required in some jurisdictions to install smoke and carbon monoxide detectors where heaters are installed. Install at least one smoke detector on each floor of your home to ensure your safety. It should be located away from the wood appliance and close to the sleeping areas. Locating a smoke detector too close to a wood appliance can cause the smoke detector alarm to sound if a puff of smoke is emitted while the wood appliance door is open during reloading. Follow the smoke detector manufacturers placement, installation, and maintenance instructions

Average CO emission measured in the flue during combustion was 0.8 gr/min.

3.0 Maintenance

When performing maintenance on your stove, always protect yourself, using safety goggles and gloves.

3.1 Exterior Maintenance

The stove surface is painted with heat-resistant Senotherm paint. It is best kept clean by vacuuming with a soft brush attachment or by wiping with a lint-free cloth.

Over a period of time, the painted surface may become slightly grey. A can of Morsø touch-up spray paint should be available from your stove supplier. This can be applied - in accordance with the instructions - in just a few minutes. When first firing after touching up, the stove will give off a slight smell as the paint cures. Make sure to ventilate the room well during this phase.

3.2 Internal maintenance

Glass

If the stove is generally run at the correct temperatures, there should be little or no dirt on the glass. If dirt does settle during lighting, most will burn off as temperatures increase. For heavier deposits that will not burn off, use morsø glass cleaner, applied when the glass is cold, in accordance with the instructions. Never use abrasive cleaners on the glass surface.

Reasons for dirty glass

- Fuel too wet
- Logs too large or not split
- Combustion temperatures too low

Do not clean the glass while hot
Replace broken glass immediately.
Do not operate your stove if the glass in the door is damaged.

If you need to replace the glass, it should be replaced with the high temperature ceramic glass supplied by Morsø, contact your Morsø dealer.

Installing the glass

Never install the glass when the stove is in function.

Ceramic glass replacement

Ceramic glass cannot be recycled because it has a higher melting point than ordinary glass. If ceramic glass is mixed with ordinary glass, the raw material is spoiled, and the reclaiming process may be halted. Take care that the ovenproof glass does not end up among ordinary recycled waste. That will be a great benefit to the environment.

Note: Should be handed in to a recycling station as ceramic glass.

1. When you open the door, you will find two hinge pins, one in each hinge. Remove the two hinge pins, lift the door off the hinges and place it face down on a sheet of cardboard or other nonabrasive fabric.
2. Unscrew the 4 bolts that secure the glass. (In the event that a bolt sheers off when being unscrewed, remove the remaining body of the bolt by drilling down its centre with 1/8 inch high speed steel drill bit. Smaller drill bits may be successful, but do not use a larger bit. Make sure the bit stays away from the edges of the bolt - this may damage the thread in the cast iron).
3. Remove the old ceramic gaskets and clean up the surface underneath with wire wool or emery paper to remove loose particles.
4. Place the new gasket material in position around the perimeter of the window area, making sure to pinch them to the length in such a way that they make a continuous seal. Leave no gaps.
5. Place the new glass in position on the strips and screw home the fresh bolts and fitting by hand.
6. Finally, give each of the bolts an extra half turn or so. The glass should held tight enough by that cleaning will not dislodge it. Do not over-tighten the bolts as this may put excessive pressure on the glass, resulting in cracking - important!

To reduce the risk of breaking the glass, avoid striking the glass or slamming the door.

Internal service parts

The flame-path equipment - consisting of the ashpan, grate, firebricks, Cast iron fire plates, glass, baffle and flue collar - are subject to the extremes of heat produced by the fire. From time to time, one or other of these parts may need replacing as a matter of routine maintenance.

NOTE: The flame-path equipment, the ceramic rope and the paint finish are not covered by guarantee.

All of these service parts can be bought from your morsø dealer, and we recommend that damaged parts are replaced as soon as possible to avoid collateral damage.

Should the baffle be distorted by an overfire, the stove will still function, although its efficiency may be compromised. Replace it as soon as possible.

Reasons for fast internal wear and tear

Persistent heavy firing

Soot and ashes left to accumulate

Gasket

The gasket around the perimeter of the door may harden over a period of time. It should be replaced if it becomes difficult to close the doors or if air starts to leak in around the perimeter of the doors, causing the fire to become a little less controllable. A morsø rope gasket kit is available from your stove supplier.

3.3 Cleaning the Stove and the Flue

Check for soot above the baffle plate and around the flue outlet every month or so to start with. If the stove suddenly becomes sluggish, check for a soot fall around the flue collar or in the flue/chimney.

The chimney and chimney connector should be inspected at least once every two months during the heating season to determine if a creosote buildup has occurred. If creosote has accumulated, it should be removed to reduce the risk of a chimney fire.

Clean the flue/chimney - all the way from the stove to the flue terminal point above the house. A good routine is to clean the flue after each heating season in any case, and inspect prior to the season to ensure that bird's nests or other blockages have not occurred during the off season.

Ash disposal

Empty the ashpan on a daily basis or as needed. Ash allowed to build up towards the underside of the grate will trap heat and could cause premature failure of the grate.

Empty the ashpan according to this procedure:

Open the front door, and use a shovel or poker to stir excess ash through the ash slots in the grate down into the ash pan. Take out the ash pan, making sure to keep it level to avoid spilling ash.

Dispose the ash in a metal container with a tight fitting lid.

The closed container of ashes should be placed on a noncombustible floor or on the ground, well away from all combustible materials, pending final disposal. If the ashes are disposed of by burial in soil or otherwise locally dispersed, they should be retained in the closed container until all cinders have thoroughly cooled.

Return the ash pan to its original position in the stove, and close the door.

CAUTION:

Never empty a stove in operation.

Never use your household or shop vacuum cleaner to remove ash from the stove; always remove and dispose of the ash properly.

Creosote - formation and need for removal

When wood is burned slowly, it produces tar and other organic vapors, which combine with expelled moisture to form creosote. The creosote vapors condense in the relatively cool chimney flue of a slow-burning fire. As a result, creosote residue accumulates on the flue lining. When ignited this creosote makes an extremely hot fire. When burning wood, the chimney and chimney connector should be inspected at least once every two months during the heating season to determine if a creosote buildup has occurred. If creosote has accumulated, it should be removed to reduce the risk of a chimney fire.

Chimney sweeping

Inspect the system regularly during the heating season as part of a regular maintenance schedule. To inspect the chimney, let the stove cool completely. Then, using a mirror, sight up through the flue collar into the chimney flue. If you cannot inspect the flue system in this fashion, the stove must be disconnected to provide better viewing access.

Clean the chimney using a brush the same size and shape as the flue liner. Run the brush up and down the liner, causing any deposits to fall to the bottom of the chimney where they can be removed through the clean-out door.

Clean the chimney connector disconnecting the sections, taking them outside, and removing any deposits with a stiff wire brush. Reinstall the connector sections after cleaning, being sure to secure the joints between individual sections with sheet metal screws. If you cannot inspect or clean the chimney yourself, contact your local Morsø Dealer or a professional chimney sweep.

If you do experience a chimney fire, act promptly and:

1. Close the air control.
2. Get everyone out of the house.
3. Call the Fire Department.

Annual maintenance

Before the heating season, perform a thorough cleaning, inspection and repair: Thoroughly clean the chimney and chimney connector. Inspect the chimney for damage and deterioration. Replace weak sections of prefabricated chimney. Have a mason make repairs to a masonry chimney. Inspect the chimney connector and replace any damaged sections. Check gasketing for wear or compression, and replace if necessary. Check the glass for cracking; replace if needed. Check door and handle for tightness. Adjust if needed.

How to clean the inside parts of Morsø 6100

When cleaning the inside parts of the stove in connection with the annual visits from your local chimney sweep we recommend that you remove the inside parts from the fire chamber. Please be careful as the vermiculite parts are porous. Cleaning of the stove must be done when the stove is cold.

ALWAYS USE ORIGINAL MORSØ SPAREPARTS

1. The bottom baffle is lifted up a bit and held in that position. Loosen the side bricks.

2. Tip the side bricks and remove them from the fire chamber.

3. Tip the other side brick and remove it from the fire chamber.

4. When the side bricks are removed the bottom baffle is lowered and lifted out of the fire chamber.

5. The upper baffle is removed from the brackets and lifted out of the fire chamber.

3.4 Leaving the stove for extended periods

Important:

If the stove is to be left unused for any period of time, clean it out thoroughly and leave the air control slightly open to allow airflow. Make sure that the flue does not allow rainwater to come anywhere near the stove; install a chimney cap, but do not block off the flue completely.

These measures should ensure there is a slight movement of air through the stove, and that the body of the stove remains dry, right into the corners.

Any ash left within an unfired stove can attract moisture like blotting paper. If moisture is allowed to settle within the stove, rust will form. Rust expands as it takes a grip. This can lead to undue pressure on the stove joints, and this in turn may result in damage to the stove.

NOTE: It is best to thoroughly clean the stove after the heating season has concluded. Adding a dessicant, such as kitter litter, into the ash pan helps absorb moisture during the summer months. Be sure to remove this prior to the heating season.

We hope you have many years of carefree warmth in its company. Some initial experimentation with loading and running techniques will decide your normal routine. If you have any problems after this short learning phase, please refer to your stove dealer. Should they be unable to help for any reason, please contact us in writing at the address on the front of this publication.

Warranty

Product Registration

MORSØ 10 YEAR WARRANTY CERTIFICATE

Behind every Morsø stove is more than 160 years of dedicated stove design and manufacturing experience. Quality control has always been at the heart of the production process and detailed measures have been put into place at all key stages of the build. Accordingly, provided that the stove has been supplied by an authorised Morsø dealer, Morsø will offer a 10-Year Manufacturers warranty against manufacturing defect to any of the main exterior body parts of its stoves.

Warranty Information

Limited Warranty

Morsø warrants that the wood stove is free from defects in material and workmanship under normal use and service, subject to the terms and conditions outlined below. The warranty period is valid for 10 years from the date of purchase.

What Is Covered:

This warranty covers replacement or repair of parts that are defective due to materials or workmanship.

What Is Not Covered:

The warranty does not cover damage resulting from:

- Improper installation or use not in accordance with the owner's manual, including in relation to applicable public regulations and Morsø's assembly and firing instructions.
- Damage caused by overheating and firing with the wrong fuel.
- Normal wear and tear, such as discoloration of surfaces. Wear parts, i.e. parts that wear out during normal use (e.g. smoke deflector plates, grates, refractory stones/plates as well as glass and sealing materials). The provisions of the Sales Act on liability for defects apply to these parts.
- Repairs or modifications not authorized by Morsø.
- In the event of lack of maintenance and breakage of the product's surface treatment, corrosion can occur. The warranty does not cover such occurrences. The provisions of the Sales Act on liability for defects also apply here.
- Malfunctions caused by local conditions, draft problems or damage/faults to the chimney.

Void Conditions:

This warranty is void if this wood heater is not installed, operated, and maintained in accordance with the instructions provided in this manual or if it is used to burn materials for which it is not certified by the EPA. The warranty is also void if any unauthorized modifications are made to the heater.

How To Exercise Your Warranty

To make a warranty claim, follow these steps:

1. Contact Morsø Customer Service via email at **info@morsoe.com** or by phone at **+45 96691900**
2. Provide the following information:
 - Proof of purchase (receipt or invoice).
 - Model number and serial number of the stove.
 - A detailed description of the issue, including photographs if possible
3. Morsø will evaluate the claim and, if approved, provide instructions for repair, replacement, or service.

For detailed warranty terms, please visit:

Morsø Warranty Page **<https://morsoe.com/us/customer-service/indoor/warrantystoves>**

**Stove manufacturer
Address**

**Morsø Jernstøberi A/S
Furvej 6
7900 Nykøbing Mors

Phone Number

IMPORTANT!

How to heat safely for the environment and yourself!

- **Use only dry wood**

Use only dry (max. 20% moisture content) and untreated wood. The fuel must be split and 8 - 12 cm thick.

- **Light**

Light with dry kindling (use 1 - 2 kg). Leave the door ajar and stay close to the stove during the lighting phase.

- **Good layer of embers**

Be certain to have a good layer of embers before refilling. The wood should light within 2 minutes. If the logs do not ignite it may, in an extreme case, cause the flue gases to ignite which may pose a risk to material damage or personal injury.

- **Refuelling**

When refuelling use 2 - 3 pieces of wood - no more than 2 - 2.5 kg.

- **Ensure adequate air**

i.e. clear and yellow flames.

- **Never burn overnight**

Félicitations pour l'acquisition de votre nouveau poêle Morsø !

Morsø, le plus important fournisseur sur le marché danois, fabrique des poêles-cheminées de haute qualité depuis 1853. En suivant les présentes instructions, nous sommes persuadés que votre nouveau poêle vous apportera plaisir et satisfaction durant de nombreuses années.

Sommaire

| 1.0 | Installation de votre poêle Morsø | Page no. |
|------------|---|-----------------|
| 1.1 | Vérifier les pièces mobiles dans le poêle | 4 |
| 1.2 | Le système de cheminée/conduit | 5 |
| 1.3 | Connexion du conduit | 6 |
| 1.4 | Connexion à une cheminée déjà en place | 6 |
| 1.5 | Positionnement du poêle | 8 |
| 2.0 | Fonctionnement | 12 |
| 2.1 | Avant d'allumer le feu | 12 |
| 2.2 | Allumage et intervalles d'alimentation | 14 |
| 3.0 | Entretien | 17 |
| 3.1 | Entretien extérieur | 17 |
| 3.2 | Entretien intérieur | 17 |
| 3.3 | Nettoyage du poêle et du conduit | 19 |
| 3.4 | Périodes prolongées de non-utilisation du poêle | 22 |
| 3.5 | Schéma des pièces détachées | 23 |
| 3.6 | Liste des pièces détachées | 24 |

Avant d'installer et d'utiliser votre nouvel appareil de chauffage, veuillez lire ce manuel en entier. Une mauvaise installation de cet appareil de chauffage peut entraîner un incendie.

Suivez les instructions d'installation pour limiter ce risque d'incendie. Le non-respect des instructions peut entraîner des dommages matériels, corporels ou même mortels.

Contactez l'administration locale de construction concernant les restrictions et équipements d'inspection dans votre région.

Conservez ces instructions

Accessoires en option

Une gamme étendue d'accessoires (tels que gants de manipulation, ustensiles de cheminée, nettoyant pour vitre et peinture résistant à la chaleur) est disponible pour une utilisation adaptée à votre poêle Morsø. Ils facilitent l'entretien et l'utilisation de chaque jour. Contactez votre revendeur Morsø pour plus d'informations.

Le 6100 B de Morsø a été certifié par les services d'inspection PFS TECO. Les standards du test sont UL-1482-2012 (R2015) pour les États Unis et ULC- S627-00 pour le Canada.

Le poêle est répertorié uniquement pour brûler du bois. Ne brûler aucun autre combustible.

U.S. ENVIRONMENTAL PROTECTION AGENCY. Certifié conforme aux normes d'émission de particules de 2020 en utilisant du bois de crèche.

L'émission moyenne de particules en utilisant la méthode de test du bois de crèche EPA Méthode 28 est 1.8 g / h.

Sous conditions spécifiques de test, on a pu constater que le rendement calorifique varie entre 11,892 et 19,067 Btu/hr

Un essai effectué conformément à la norme CSA B415.1 a montré que ce poêle avait un rendement moyen de chauffage supérieur à 74 %.

Ce poêle doit être révisé et réparé périodiquement pour une utilisation correcte. Il est contre la loi fédérale d'utiliser ce poêle contredit les instructions de ce manuel.

La fonte

La fonte n'est pas un matériau inerte. Raison pour laquelle il n'y a pas deux poêles identiques. Ceci en raison des marges de tolérance de la fonte et de la fabrication artisanale des poêles. De fines irrégularités sont normales sur la surface de la fonte.

1.0 Installation de votre poêle Morsø

L'installation doit être conforme à la norme CAN/CSA-B365, Code d'installation des appareils à combustibles solides et du matériel connexe.

Faire des impasses pendant l'installation peut avoir des conséquences, l'installation des poêles à bois doit être sûre et légale.

Si votre poêle Morsø n'est pas installé correctement, cela peut provoquer un incendie. Pour réduire le risque d'incendie, les instructions d'installation doivent être suivies avec soin. Contactez les responsables locaux de la construction au sujet des restrictions et des exigences d'inspection et d'installation dans votre région.

Ne pas installer dans une cheminée.

Avant de commencer l'installation de votre poêle, assurez-vous que :

- Le poêle et le raccord de cheminée sont placés suffisamment loin des matériaux de combustion afin de remplir toutes les conditions d'espacement.
- La protection du sol est adéquate et correctement effectuée conformément aux conditions.

Contactez l'administration locale de construction pour toutes les approbations nécessaires.

La plaque d'informations située à l'arrière du poêle fournit les informations nécessaires concernant les données de test de sécurité, le nom du laboratoire de test agréé et les conditions d'installations.

Les conditions d'installation diffèrent selon les districts et l'administration locale de construction a le pouvoir d'autorisation définitive pour approuver votre installation. Discutez de l'installation avec eux avant de commencer. Pour plus d'informations, contactez votre vendeur.

Ne connectez aucun conduit ou système de distribution d'air.

Important : Si vous ne suivez pas attentivement les instructions d'installation, il peut en résulter des situations dangereuses comme des incendies de cheminée ou de maison. Suivez attentivement les instructions et ne vous en écarter pas car cela peut entraîner des dégâts corporels ou matériels.

1.1 Vérifier les pièces mobiles dans le poêle

Après le déballage, vérifiez que les briques réfractaires sont fermement en place et n'ont pas bougé pendant le transport. Vérifiez également que le contrôle d'air fonctionne librement.

Avant le premier allumage, assurez-vous que le déflecteur est placé correctement.

Accessoires standard

Le gant Morsø et le joint étanche de raccord de tuyau céramique sont des accessoires standard et se trouvent habituellement dans le cendrier ou le foyer.

1.2 Le système de cheminée/conduit

Remarque : le système de conduit doit être sécurisé de façon indépendante et ne doit pas reposer sur le poêle.

Le poêle ne doit pas être raccordé à un conduit de cheminée servant à un autre appareil. (Plusieurs tuyaux peuvent parcourir une seule souche de cheminée ; utilisez un seul tuyau par appareil).

Utilisez une cheminée maçonnée de type résidentiel ou une cheminée d'usine de type HT répertoriée.

Cheminée Haute Température (H.T.) Standard UL-103-1985 (2100° F) pour les États-Unis et Standard Haute Température (650° C) ULC S-629 pour le Canada.

Les dimensions internes du raccord de cheminée et de la cheminée ne doivent pas être inférieures à 6 pouces (150 mm) de diamètre (ou coupe transversale équivalente) et ne doivent être beaucoup plus grandes. Une coupe trop grande a tendance à laisser les gaz du conduit refroidir excessivement, causant ainsi lenteur ou imprévisibilité de fonctionnement du poêle.

Nous conseillons que la longueur de la cheminée est au moins de 16 pieds (4,90 m) (pas indispensable) au-dessus du poêle dans des situations ménagères normales, mesurée du collier de serrage du tuyau à l'extrémité supérieure de la cheminée.

Les conditions locales comme, par exemple, la construction du toit, de gros arbres à proximité et une altitude élevée, peuvent avoir une influence sur le tirage et la hauteur de la cheminée. Veuillez donc contacter les ramoneurs professionnels locaux ou votre concessionnaire Morsø.

N'installez pas la cheminée directement à la sortie du poêle.

Un raccord de cheminée (conduit de fumée) est requis, sauf si l'appareil est spécifiquement approuvé pour ce type d'installation. Un raccord de cheminée est fourni avec le poêle.

Installations typiques de cheminée usine ou maçonnée

1.3 Connexion du conduit

Le poêle est équipé par l'usine d'une plaque ronde détachable bloquant la sortie arrière du tuyau (derrière la plaque de protection arrière). Un collier de serrage de tuyau est placé dans la zone du foyer.

Utilisez un raccord de cheminée bleu ou noir de 24 MSG ou un raccord de cheminée à double paroi répertorié. Reportez-vous aux règlements locaux et aux instructions du fabricant de la che inée concernant les précautions à respecter pour faire passer une cheminée à travers un mur ou un plafond combustible. Pensez à sécuriser le raccord de cheminée avec au moins trois vis au produit et à chaque section contiguë.

Le collier de serrage peut être fixé à la sortie arrière. Détachez simplement en frappant le panneau rond sur la plaque arrière de protection de chaleur pour révéler la plaque en fonte. Retirez la plaque détachable et le collier de serrage du tuyau et changez-les de place. Sécurisez à nouveau en appuyant vers le bas et en serrant les vis incluses.

Positionnez le poêle et connectez le système de conduit.

Portez des gants et des lunettes de protection lors du perçage, coupage ou assemblage des sections du raccord de cheminée.

1.4 Connexion à une cheminée déjà en place

Un raccord de cheminée est le tuyau à double ou simple paroi qui relie le poêle à la cheminée. La cheminée elle-même est la structure maçonnée ou préfabriquée qui contient le tuyau. Les raccords de cheminée permettent de relier le poêle à la cheminée.

Les raccords à double paroi doivent être testés et répertoriés pour une utilisation avec des appareils à combustibles solides. Les raccords à paroi simple doivent être faits en acier de calibre 24 ou plus. N'utilisez pas de raccords galvanisés : ils ne résistent pas aux hautes températures atteintes par la fumée et les gaz d'échappement et qui peuvent dégager des vapeurs toxiques sous grande chaleur. Le raccord doit avoir un diamètre de 6 pouces (150 mm).

Si possible, évitez de faire passer le raccord de cheminée à travers un mur ou un plafond combustible. Si cela est inévitable, référez-vous aux sections sur Traverser les murs.

Ne faites pas passer le raccord à travers un grenier, un placard ou tout espace confiné semblable lors de l'installation des raccords de cheminée.

Il est primordial de garder les gaz du tuyau en déplacement doux dans la bonne direction. Ne déviez pas dans un grand vide à cet endroit ; formez plutôt une section continue jusqu'en haut. Utilisez des courbures moyennes (par ex. 45° au lieu de 90°) plutôt que des angles aigus lorsqu'un changement de direction est nécessaire. Toutes les parties du conduit doivent être accessibles pour des raisons de nettoyage.

Dans les tronçons de cheminée horizontaux, maintenez un espacement de 18 pouces (455 mm) du plafond. Gardez-les aussi courts et directs que possible avec des coudes n'excédant pas 90 degrés. Inclinez les tronçons horizontaux de raccords de ¼ par pied (20mm par mètre) en partant du poêle vers la cheminée. La longueur maximum recommandée d'un tronçon horizontal est de 3 pieds (1 mètre) et la longueur totale ne doit pas dépasser 8 pieds (2,5 mètres).

Les informations sur l'assemblage et l'installation des raccords sont fournies par les instructions du fabricant, comme vous assemblez et fixez le raccord au poêle et à la cheminée.

Assurez-vous que le poêle et le raccord de cheminée installés se trouvent à une distance correcte des matériaux de combustion proches. Voir le paragraphe sur les espacements page 8.

Si le conduit passe au travers d'une paroi ou d'une cloison construite en matériaux inflammables, l'installation doit être conforme à la norme CAN/CSA-B365.

Systèmes de raccord de cheminée et autorisations des appareil de chauffage ménagers à travers les murs inflammables

A. Maçonnerie en briques charpentée d'au moins 3,5 pouces (90 mm) d'épaisseur dans un mur inflammable avec une séparation en brique de 12 pouces (305 mm) minimum de la doublure en argile aux combustibles. La doublure en argile réfractaire doit aller de la surface de la sortie du mur en brique jusqu'à la surface interne de la doublure du tuyau de cheminée mais pas au delà et doit être solidement cimentée en place.

B. Tronçon de cheminée usine répertoriée, à isolation solide, de même diamètre intérieur que le raccord de cheminée et ayant une isolation de 1 pouce (25 mm) ou plus avec un espace d'air minimum de 9 pouces (230 mm) entre le mur extérieur de la longueur de la cheminée et les combustibles.

C. Raccord de cheminée en tôle, minimum calibre 24 en épaisseur, avec un cylindre ventilé minimum calibre 24 en épaisseur ayant deux canaux d'air de 1 pouce (25 mm), séparés des combustibles par au moins 6 pouces (150 mm) d'isolation de fibre de verre. L'ouverture doit être couverte et le cylindre sou tenu soutenu par un support en tôle, minimum calibre 24 en épaisseur.

D. Tronçon de cheminée usine répertoriée, à isolation solide d'un diamètre intérieur plus grand de 2 pouces (50 mm) que le raccord et ayant une isolation de 1 pouce (25 mm) ou plus, servant de traverse pour un raccord de cheminée à simple paroi en tôle d'épaisseur minimum de calibre 24, avec un espace d'air d'au moins 2 pouces (50 mm) entre le mur extérieur de la section de cheminée et les combustibles. La longueur minimum de la section de cheminée doit être de 12 pouces (305 mm) et espacée de 1 pouce (25 mm) du raccord utilisant des plaques de soutien en tôle à chaque extrémité de la section de cheminée. L'ouverture doit être couverte et la section de cheminée soutenue des deux côtés avec des supports en tôle fixés à des murs de calibre 24 épaisseur minimum. Les fixations utilisées pour sécuriser la section de cheminée ne doivent pas pénétrer la doublure du conduit de cheminée.

Assurez-vous que tous les raccords entre les pièces de la cheminée et le poêle soient correctement scellés afin que la cheminée soit hermétique entre le poêle et la sortie de cheminée.

1.5 Positionnement du poêle

Le poêle doit être installé contre un mur ininflammable.

La garniture de montage mural est fournie avec quatre orifices pour la fixation des boulons à coquille expansible dans le mur.

Les boulons doivent être dimensionnés pour assurer que le mur et les matériaux qui le constituent puissent supporter le poêle.

En cas de doute, contacter un expert. Le poids du poêle vide est de 105 kg (232 lbs). La garniture de montage mural peut être utilisée comme gabarit pour le perçage.

Montez la garniture de montage mural sur le mur. Si la sortie du poêle désirée est à l'arrière, il est nécessaire de construire une traversée murale adaptée à travers la paroi (voir illustration).

Levez le poêle à bois pour le mettre en place, de manière à ce qu'il repose sur la pièce de fond de la garniture du montage mural.

Assurez-le encore ensuite à la garniture à l'aide des vis fournies.

Distance avec murs et linteaux

Si le poêle se trouve à proximité de matériaux combustibles, consultez tous les règlements de constructions locaux et nationaux en vigueur en ce qui concernent les espacements. Quels que soient les règlements qui s'appliquent à votre région, n'installez en aucun cas le poêle à moins de 8 pouces des matériaux combustibles sur les côtés et à moins de 16 pouces au-dessus du poêle (des installations des poêles demandent plus d'espacement au-dessus du poêle - voir le graphique des distances en dessous). Il peut s'avérer nécessaire d'augmenter ces distances si les matériaux sont sensibles à la chaleur. Notez également que les papiers peints et autres matériaux de décoration peuvent se détacher sous l'effet de la chaleur. Prenez garde à ce qu'ils ne tombent pas sur le poêle, le cas échéant.

Si un échappement sur l'arrière est utilisé, la protection du sol doit être étendue sous le conduit de cheminée et de 2 pouces de chaque côté.

|--|--|--------|
| | ÉTATS-UNIS | CANADA |
| A. Distance de prolongement, arrière | - | 200 mm |
| B. Distance de prolongement, côté droit | 6" | 200 mm |
| C. Distance de prolongement, côté gauche | 6" | 200 mm |
| D. Distance de prolongement, avant | 16" | 450 mm |

Distance des meubles

La distance minimum recommandée entre le poêle et les meubles est de 30 pouces (760 mm). Veuillez noter que certains meubles sont plus facilement affectés par la chaleur et peuvent par conséquent nécessiter d'être plus éloignés. Ceci est votre responsabilité.

De plus, maintenez tout autre matériau combustible éloignés du poêle. En général, une distance de 30 pouces (760 mm) doit être conservée entre le poêle et les objets inflammables mobiles tels que chiffons, journaux, bois de chauffage, etc.

Sur le sol

Aux États-Unis, la protection de sol doit être réalisée en matériau non combustible et installée de façon à s'étendre sous le poêle ainsi que 16" à l'avant et 6" sur les côtés de la porte de chargement de combustibles et des ouvertures de retrait des cendres.

Au Canada, pour se conformer à la norme CSA B365, Code d'installation des appareils à combustibles solides et du matériel connexe, toute couche de combustible sous l'appareil et/ou dans la zone qui s'étend horizontalement à au moins 450 mm (18 po) au-delà de l'appareil sur les côtés équipés d'une porte, et au moins 200 mm (8 po) au-delà de l'appareil des autres côtés, doit être protégée par une protection de braise continue, durable et non combustible qui assurera une protection totale. La protection contre les braises de 450 mm (18 po) requise de chaque côté d'une porte doit s'étendre sur toute la largeur du poêle plus les 200 mm (8 po) requis de chaque côté de l'unité sans porte. Lorsqu'un poêle est installé à moins de 200 mm (8 po) d'un mur, la protection contre les braises doit seulement s'étendre jusqu'à la base du mur. Une protection contre les braises ne doit pas être placée au-dessus d'un tapis à moins qu'elle ne soit structurellement soutenue pour empêcher le déplacement et la déformation.

AVERTISSEMENT

**NE JAMAIS TIRER DE L'AIR DE COMBUSTION D'UNE PAROI, DU SOL, D'UN ESPACE DANS LE PLAFOND, NI D'UN ENDROIT CLOS COMME DES COMBLES OU UN GARAGE.
NE PAS INSTALLER DANS UNE CHAMBRE À COUCHER.**

ATTENTION

L'INTÉGRITÉ STRUCTURELLE DU SOL, DES PAROIS ET DU PLAFOND/TOIT DU MOBILE HOME DOIT ÊTRE PRÉSERVÉE (NE PAS COUPER DANS UNE POUTRELLE DE SOL, UN TENON DE PAROI, UN SUPPORT DE PLAFOND, ETC.)

NE PAS UTILISER DE GRILLE POUR SURÉLEVER LE FEU – ALLUMER LE FEU DIRECTEMENT DANS LE FOYER.

Remarque :

Protection de l'acide

En cas de lavage à l'acide de la maçonnerie autour du poêle, protégez la surface du poêle avec une couverture résistante à l'acide.

Entrée d'air frais

A moins que la circulation d'air dans la pièce par les portes, fenêtres et autre soit jugée suffisante, une entrée d'air frais est nécessaire. Cette entrée d'air doit avoir un espace d'air libre de 2 pouces carrés (1250 mm carrés). Ceci est particulièrement important lorsque la pièce est bien scellée ou lorsqu'une hotte aspirante ou un système de ventilation perturbe la pression naturelle de l'air. Une telle entrée d'air ne doit pas se trouver sur un mur habituellement sujet à une pression négative du déplacement habituel du vent. Evitez de placer l'entrée d'air directement à l'opposé du poêle dans la pièce créant ainsi un courant d'air froid.

Détecteurs de monoxyde de carbone

Dans certaines juridictions, l'installation de détecteurs de fumée et d'oxyde de carbone dans les lieux où sont placés des appareils de chauffage est obligatoire. Pour assurer votre sécurité, installez au moins un détecteur de fumée à chaque étage de votre maison. Il devra être placé à distance de l'appareil à bois et à proximité des espaces de repos. En effet, en plaçant un détecteur de fumée trop près du poêle, l'alarme risque de se déclencher si un rejet de fumée intervient lorsqu'on ouvre la porte pour remettre du bois. Suivez les instructions du fabricant de détecteurs de fumée concernant l'emplacement, l'installation et l'entretien.

2.0 Fonctionnement

2.1 Avant d'allumer le feu

Pour une utilisation avec des combustibles solides uniquement. Ne poussez pas trop le feu, si l'appareil ou le raccord de cheminée devient incandescent, le feu est trop fort. Inspectez et nettoyez fréquemment la cheminée. Dans certaines conditions d'utilisation, la formation de créosote peut arriver rapidement. A cause des risques de débordement de fumée et de flammes, opérez uniquement avec la porte fermée.

Attention :

Chaud pendant le fonctionnement. Tenir les enfants, vêtements et meubles éloignés. Risque de brûlures cutanées en cas de contact. Ne pas utiliser de produits chimiques ni de liquides pour l'allumage. Ne pas brûler de déchets ni de liquides inflammables.

Ne pas utiliser d'essence, de pétrole à lampe, de kérosène, d'allumeur ou de liquide à charbon de bois ou tout autre liquide pour démarrer ou relancer un feu dans ce poêle.

Tenir tous ces liquides éloignés du poêle pendant son fonctionnement.

Ne brûlez pas :

- Ordures;
- Déchets de pelouse ou de jardin;
- Matériaux contenant du caoutchouc, y compris les pneus;
- Matériaux contenant du plastique;
- Produits pétroliers usagés, peintures ou diluants pour peinture, ou produits à base d'asphalte;
- Matériaux contenant de l'amiante;
- Débris de construction ou de démolition;
- Traverses de chemin de fer ou bois traité sous pression;
- Fumier ou restes d'animaux;
- Bois flotté d'eau salée ou autres matériaux précédemment saturés d'eau salée;
- Bois non bien sec; ou
- Produits en papier, carton, contreplaqué ou panneaux de particules. L'interdiction de brûler ces matériaux n'interdit pas l'utilisation d'allume-feu fabriqués à partir de papier, carton, sciure, cire et substances similaires dans le but d'allumer un feu dans un poêle à bois concerné.

Brûler ces matériaux peut entraîner la libération de fumées toxiques ou rendre le poêle inefficace et causer de la fumée.

Choisir votre combustible

Vous pouvez brûler tous les types de bois naturel dans ce poêle mais ils doivent être bien secs. Une fois coupé en longueur, couper le bois en deux - conformément aux dimensions mentionnées ci-dessous - pour permettre à l'humidité de s'évaporer.

Couper le bois à une longueur maximale de 12 pouces (30 cm) et d'un diamètre d'environ 3 à 3,5 pouces (7 à 8 cm). Si vous pouvez peser votre bois, comptez environ 1,0 kg. Pour une combustion optimale et un bon dégagement de chaleur, le bois doit pas contenir plus de 20% d'humidité; ceci peut facilement être contrôlé à l'aide de l'hygromètre Morsø (article #62929900)

Stockez les bûches couvertes dans un endroit bien aéré, où l'air peut circuler entre les bûches. Certains bois tendres peuvent n'avoir besoin que d'un bel été pour sécher, alors que certains bois plus durs, comme p.ex. le chêne, l'érable et l'orme peuvent prendre jusqu'à 18 mois. Éviter du bois trop sec, souvent d'une couleur tirant sur le gris, car dans certaines conditions, cela peut poser des problèmes de rendement tels que lenteur et projection d'étincelles. Un bois bien sec est léger à manipuler et présente des fentes du centre vers les extrémités. Si votre bois crépite ou grésille en brûlant et que de la suie persiste à se former sur la porte vitrée du poêle, votre bois n'est pas suffisamment sec.

N'utilisez jamais de dérive (de la mer) dont le contenu salé peut entraîner de la corrosion, ni du bois de construction pouvant être imprégné de produits chimiques.

Pour optimiser la performance

Brûler du bois humide a un effet négatif sur le rendement de l'appareil.

L'efficacité du poêle à bois est principalement influencée par son emplacement. Le poêle est principalement conçu pour chauffer la pièce où il est installé.

Espace de vie principal. Placer le poêle à bois dans l'espace de vie principal maximise l'efficacité, car il chauffe directement l'espace où l'on passe le plus de temps.

Sous-sol. Installer le poêle au sous-sol peut être moins efficace si la chaleur ne circule pas adéquatement vers les niveaux supérieurs. Une bonne isolation et une gestion appropriée de la circulation de l'air sont cruciales pour un chauffage efficace.

Extérieur par des températures glaciales. Utiliser le poêle à bois à l'extérieur dans des conditions très froides réduit considérablement l'efficacité. Le poêle doit travailler plus dur pour maintenir la chaleur, ce qui entraîne une consommation accrue de combustible et un chauffage moins efficace.

Attention: Ne placez pas de combustible dans l'espacement libre requis à proximité du poêle ni dans l'espace destiné au chargement du combustible ou au vidage des cendres.

Allumage

Au début, faites un petit feu pour que la peinture s'accoutume et que les plaques principales du poêle se mettent en place. La peinture peut dégager des vapeurs. Aérez la pièce pendant cette phase. Le réglage de l'aération, les techniques d'allumage et les intervalles d'alimentation dépendent du tirage de la cheminée, du combustible utilisé, de la chaleur voulue, etc. Quelques techniques de base sont soulignées ci-dessous.

IMPORTANT

Pour assurer une combustion correcte et éviter de bloquer le flux d'air, gardez toujours la charge de combustible en dessous de la boîte d'alimentation en air secondaire en acier inoxydable située sur la paroi arrière du foyer. L'espace devant et au-dessus de la boîte d'alimentation en air est réservé uniquement à la combustion des gaz volatils.

En principe:

Votre poêle est équipé d'entrées d'air primaire et secondaire.

L'air primaire est contrôlé grâce au levier situé sous le rebord à cendres du poêle. Pour ouvrir l'admission d'air, déplacer le levier de contrôle vers le bas. De l'air préchauffé pénètre alors dans la chambre de combustion via le système de " nettoyage d'air " situé à l'intérieur du poêle et au dessus de la vitre.

L'air secondaire arrive vers la chambre de combustion grâce au déflecteur spécialement conçu, situé derrière la chambre de combustion. L'air secondaire est injecté dans les gaz du conduit à la fois au dessus et en face du feu, rendant ainsi le processus de combustion plus propre et plus efficace. L'admission d'air secondaire est constamment ouverte et n'est pas réglable.

Pour plus de sécurité, votre poêle est équipé d'une poignée amovible.

2.2 Allumage et intervalles d'alimentation

Le premier allumage du poêle nécessite un volume d'air important. Lorsque le poêle est froid, laissez la porte entrouverte de 2 ou 3 cm pendant les premières minutes et ouvrez complètement l'entrée d'air primaire. Ne laissez pas le poêle sans surveillance tant que la porte est ouverte.

Afin de constituer un lit de cendres raisonnable au fond du poêle, utilisez 2 à 4 livres de petit bois sec lors du premier allumage. Maintenez en permanence une couche de 1 à 1,5 pouces (2 à 3 cm) de cendres au fond de la chambre de combustion à chaque fois.

1. Lorsqu'on allume un poêle à bois, il est recommandé d'utiliser la méthode d'allumage Top Down. C'est la méthode d'allumage la plus respectueuse de l'environnement. Pour obtenir rapidement la formation d'une couche de braises, utiliser pour l'allumage 2 sachets allume-feu, ainsi que 1,5 kg environ de bois d'allumage. Poser les allume-feu juste en-dessous de la couche supérieure de petit bois.

Il est important de commencer avec précaution, de telle sorte que la combustion se développe lentement. De cette manière, la formation de suie sur la vitre est faible. En effet, l'encrassement de la vitre est souvent dû à une combustion trop violente et au fait que les flammes entrent en contact avec des surfaces froides. En évitant la formation de suie lors de l'allumage et en faisant en sorte d'obtenir une couche de braises chaudes, la formation de suie sera minime lors des étapes suivantes d'alimentation

2. Ouvrez complètement le régulateur d'air secondaire..

3. Allumez le feu.

4. Après l'allumage, fermez partiellement les portes en les laissant entrouverte de 1 ou 2 pouces pour laisser entrer suffisamment d'air de combustion.

5. Lorsque la cheminée est chaude après 5 à 10 minutes, fermez les portes. Un lit de braises convenable se forme au bout de 15 à 20 minutes.

6. Au moment de recharger, repartez les braises dans le foyer en les rapprochant surtout vers l'avant du poêle. Nous vous recommandons d'utiliser une charge de carburant avec un poids de 3 lb (2 pièces) et jusqu'à 6 lb (5 pièces). Toujours garder la charge de carburant sous le secondaire boîte à air en acier inoxydable. L'espace devant et au-dessus de la boîte à air est réservé à la combustion de gaz volatils.

7. Poser 2-5 morceaux de bois (2 à 6livres) d'environ 20 cm de longueur sur les braises. Laissez ½ pouce (1 cm) ou plus entre chaque morceau.

8. Fermez la porte et laissez l'entrée d'air primaire complètement ouverte. Si le feu ne s'allume pas, entrouvrez légèrement la porte pour permettre à la quantité d'air nécessaire d'enflammer le bois. Refermez la porte une fois que le feu a pris.

9. Après quelques minutes, réglez l'entrée d'air primaire en fonction de la chaleur voulue. Veillez à ce qu'il y ait toujours assez d'air pour que les flammes restent claires une fois la quantité d'air de combustion réduite et pendant toute la combustion. Si vous utilisez le taux de combustion minimum (poignée du régulateur d'air complètement déplacée vers la gauche), laissez le feu s'établir correctement en brûlant à un taux de combustion moyen pendant environ 15 minutes au préalable. Déplacez la poignée du régulateur d'air de la position fermée à une position intermédiaire pour atteindre un taux de combustion moyen

10. Anticipez chaque alimentation et souvenez-vous de n'ajouter qu'une modeste couche de bois tant qu'il y a beaucoup de braises. Reprenez les points 6 à 9.

N'essayez en aucun cas d'accroître le feu de votre poêle en modifiant le réglage du contrôle d'air décrit dans ces instructions.

Attention : Les poêles à feu de bois ne doivent jamais être laissés sans surveillance la porte ouverte.

Cet appareil de chauffage à bois a un taux de combustion minimal inférieur fixé par le fabricant et qu'il convient de ne pas modifier. Les règles fédérales interdisent de modifier ce réglage ou d'effectuer sur ce poêle toute autre intervention contrevenant aux instructions de service figurant dans le présent manuel

Si vous laissez les portes entrouvertes, gaz et flammes peuvent sortir du foyer par l'ouverture, créant ainsi des risques d'incendie et de fumée. Nous vous conseillons d'installer un détecteur de fumée dans la pièce où vous installez le poêle.

NE PROVOQUER JAMAIS DE SURCHAUFFE. Toute surchauffe peut entraîner un incendie ou des dégâts permanents pour le poêle. Si n'importe quelle pièce du poêle devient incandescente, vous êtes en surchauffe.

Le poids maximal de bois recommandé par charge est de 3 kg/h/6 lbs (environ 5 bûches).

Dans des conditions de chauffage normales, la température moyenne à l'intérieur du tuyau du poêle, mesurée à 20 cm au-dessus du poêle est d'env. 300° C (550°F). La température maximale dans le tuyau du poêle ne doit pas excéder 450° C (750°F). Une température du poêle dépassant 450°C (750°F) est considérée comme surchauffe et peut être la cause d'une usure prématurée du poêle.

Pour permettre de mesurer correctement la température de fonctionnement de votre poêle, nous recommandons l'utilisation du Thermomètre à gaz pour poêle Morsø (article # 62901200). Le Thermomètre à gaz pour poêle est magnétique; il se fixe sur le tuyau du poêle, à environ 20 cm (8") au-dessus de la plaque supérieur du poêle, et mesure la température de surface du tuyau du poêle. Disponible auprès de votre distributeur Morsø agréé.

Conditions de tirage

Si de la fumée ou des émanations se dégagent du poêle lors de l'allumage et de l'alimentation ou si tout simplement le feu ne prend pas, ceci est sûrement dû à un faible tirage. (Dans très peu de cas, pas assez d'air frais entre dans la pièce – voir les conseils d'installation plus haut). Demandez conseil à votre vendeur pour savoir comment améliorer votre système de tuyauterie pour accroître le tirage.

Règles de feu de bois

Pour avoir moins de chaleur, mettez moins de bûches dans le poêle et réduisez la quantité d'air. Il est toujours important de maintenir une bonne couche de braises.

Moins de chaleur – moins de bois – moins d'air

Plus de chaleur – plus de bois – plus d'air

Des dépôts de suie se font sur la vitre si le poêle fonctionne trop lentement ou si votre bois n'est pas assez sec.

Il est fortement conseillé de ne pas laisser le poêle allumé pendant la nuit. En plus des effets nocifs sur l'environnement, le rendement du bois serait mauvais puisque les gaz qu'il contient ne s'enflamment pas à basse température mais se fixent sous forme de suie (gaz non consommés) dans la cheminée et le poêle.

3.0 Entretien

Lors de l'entretien de votre poêle, portez toujours des lunettes et des gants de protection.

3.1 Entretien extérieur

La surface du poêle est peinte avec la peinture résistant à la chaleur Senotherm. Nettoyez de préférence avec un aspirateur équipé d'un embout à brosse souple ou en essuyant avec un chiffon anti-peluche.

Au bout d'un certain temps, la surface peinte peut devenir légèrement grise. Vous pouvez trouver une boîte de peinture en spray pour retouche Morsø chez votre revendeur. Il suffit de quelques minutes – en suivant les instructions- pour l'appliquer. Lors du premier allumage après une retouche, une légère odeur peut se dégager du poêle le temps de l'accoutumance de la peinture. Assurez-vous de bien aérer la pièce pendant cette période.

3.2 Entretien intérieur

Vitre

Si le poêle est généralement utilisé aux températures correctes, la vitre ne devrait être que peu ou pas sale. Si de la saleté se dépose lors de l'allumage, la majeure partie brûlera au fur et à mesure que la température augmente. En cas de dépôts plus importants qui ne brûlent pas, utilisez le nettoyant pour vitres Morsø. Appliquez sur la vitre froide en suivant les instructions. N'utilisez jamais de nettoyeurs abrasifs sur la surface vitrée.

Causes possibles de vitre sale

- Combustible trop humide
- Bûches trop grandes ou non fendues
- Température de combustion trop basse

**Ne pas nettoyer le verre lorsqu'il est chaud
Remplacez immédiatement toute vitre cassée.**

N'utilisez pas votre poêle si la vitre de la porte est endommagée.

Si vous devez changer la vitre, utilisez du verre céramique à haute température fourni par Morsø. Contactez votre concessionnaire Morsø.

Installer la vitre

N'installez jamais la vitre lors du fonctionnement du poêle.

Remplacement du verre céramique

Le verre céramique ne peut pas être recyclé, car sa température de fusion est trop élevée. Si le verre céramique est mélangé au verre normal, la matière première est dénaturée et le processus de recyclage du verre peut être interrompu. Veillez à ce que le verre réfractaire ne soit pas traité comme matériau à recycler normal. Vous contribuerez beaucoup à la protection de l'environnement.

ATTENTION ! Doit être déposé comme vitre céramique dans une station de collecte des déchets.

1. Soulevez la porte pour la sortir de ses gonds et posez-la face avant vers le bas sur des cartons ou tout autre tissu non abrasif.
2. Dévissez les quatre boulons qui maintiennent la vitre. (Au cas où un boulon se casserait lors du dévissage, retirer le reste du boulon en perçant au centre avec une mèche de perceuse acier grande vitesse de 1/8 de pouce (3 mm). Des mèches plus petites peuvent également convenir mais n'utilisez en aucun cas de mèche plus grande. Assurez-vous que la mèche ne touche pas les bords du boulon – ceci pouvant endommager le filetage dans la fonte).
3. Retirez le joint d'étanchéité en céramique usagé et nettoyez la surface en dessous avec de la paille de fer ou du papier de verre pour éliminer les particules.
4. Mettez en place le nouveau joint d'étanchéité tout autour de l'emplacement de la vitre en vous assurant de bien le pincer tout le long de façon à faire un joint continu. Ne laissez aucun espace.
5. Placez la nouvelle vitre sur les bandes et revissez les boulons et équipements à la main.
6. Enfin, donnez environ un demi-tour supplémentaire aux boulons. La vitre doit être tenue assez fermement de manière à ne pas bouger pendant le nettoyage. Ne vissez pas les boulons trop fort car cela entraîne une pression excessive sur la vitre risquant de la casser. Important !

Afin de réduire le risque de casser la vitre, évitez de frapper sur la vitre ou de claquer la porte.

Pièces de rechange intérieures

L'équipement feu – comprenant le cendrier, la grille, les briques réfractaires, plaques de fonte pour protection feu, la vitre, le déflecteur et le collier de serrage du tuyau – est soumis à une chaleur extrême produite par le feu. De temps en temps, il peut s'avérer nécessaire de remplacer une de ces pièces pour des raisons d'entretien routinier.

REMARQUE : L'équipement feu, la corde céramique et la finition de peinture ne sont pas couverts par la garantie.

Toutes ces pièces de rechange sont en vente chez votre concessionnaire Morsø et nous vous recommandons de remplacer toute pièce endommagée aussi tôt que possible afin d'éviter des dégâts supplémentaires.

Si le déflecteur est déformé par une surchauffe, le poêle continue à fonctionner même si sa performance peut être compromise. Remplacez-le dès que possible.

Causes possibles d'usure interne rapide

Feu fort et persistant

Accumulation de suie et de cendres

Joint d'étanchéité

Le joint entourant le périmètre des portes peut durcir avec le temps. Remplacez-les s'il devient difficile de fermer les portes ou si l'air commence à s'infiltrer autour des portes, causant ainsi un feu un peu moins contrôlable. Un jeu de joint Morsø est en disponible chez votre revendeur.

3.3 Nettoyage du poêle et du conduit

Vérifiez la présence de suie au-dessus de la plaque du déflecteur et autour de la sortie du tuyau environ tous les mois pour commencer. Si le poêle devient soudain lent, regardez si de la suie est tombée autour du collier de serrage du tuyau ou dans le tuyau/ la cheminée.

Effectuez une inspection de la cheminée et du raccord de cheminée au moins tous les deux mois pendant la saison de chauffage pour détecter la formation éventuelle de crésote. S'il y a de crésote il faut l'éliminer pour réduire le risque d'un feu de cheminée.

Elimination des cendres

Videz les cendriers quotidiennement ou selon les besoins. Si vous laissez des cendres s'accumuler en dessous de la grille, la chaleur est piégée et cela peut entraîner un mauvais fonctionnement prématuré de la grille.

Videz le cendrier selon cette procédure :

Ouvrez les portes avant et utilisez une pelle ou un tisonnier pour remuer l'excès de cendres et la faire tomber dans les cendriers à travers les fentes de la grille. Retirez le cendrier en prenant soin de bien le tenir horizontal.

Jetez les cendres dans un récipient en métal avec un couvercle hermétique.

Placez le récipient fermé contenant les cendres sur un sol non inflammable ou sur la terre, bien éloigné de tout matériau combustible en attendant l'enlèvement définitif. Si vous vous débarrassez des cendres en les enterrant ou en les dispersant, gardez-les dans le récipient fermé jusqu'à leur refroidissement complet. Remettez le cendrier en place et fermez le poêle.

Attention :

Ne jamais vider un poêle en train de fonctionner.

Ne jamais utiliser votre aspirateur ménager ou professionnel pour enlever les cendres du poêle ; toujours éliminer les cendres correctement.

Crésote – Formation et élimination.

Lorsque le bois brûle lentement, il produit du goudron et d'autres vapeurs organiques qui s'associent avec l'humidité émise pour former du crésote. Les vapeurs de crésote se condensent dans le conduit de cheminée relativement froid lors d'un feu brûlant faiblement. Il en résulte que les résidus de crésote s'accumulent sur la paroi du tuyau. Une fois enflammé, le crésote crée un feu extrêmement chaud.

Vérifiez la cheminée et le conduit de cheminée au moins tous les deux mois pendant la saison de chauffage pour contrôler l'absence de formation de crésote. En cas de dépôt de crésote, éliminez-le pour diminuer le risque de feu de cheminée.

Ramontage de la cheminée

Inspectez le système régulièrement au cours de la saison de chauffage comme partie intégrante d'un programme d'entretien régulier. Pour inspecter la cheminée, laissez le poêle refroidir complètement. Puis, à l'aide d'un miroir, regardez par le collier du tuyau dans le conduit de cheminée. Si vous ne pouvez pas inspecter le système de conduit de cette façon, déconnectez le poêle pour faciliter l'accès.

Nettoyez la cheminée à l'aide d'une brosse de la même forme et taille que le tuyau. Faites coulisser la brosse de haut en bas et inversement dans le conduit afin de faire tomber tous les dépôts en bas de la cheminée où vous pouvez les évacuer grâce à la porte de nettoyage.

Nettoyez le raccord de cheminée en déconnectant les sections, mettez-les à l'extérieur et éliminez tous les dépôts avec une brosse dure. Remettez les sections du raccord en place après le nettoyage en vous assurant de sécuriser les joints entre chaque section avec des vis en tôle. Si vous ne pouvez pas inspecter ou nettoyer la cheminée vous-même, contactez votre concessionnaire Morsø ou un ramoneur professionnel.

En cas de feu de cheminée, agissez rapidement et :

1. Fermez le contrôle d'air.
2. Faites sortir tout le monde de la maison.
3. Appelez les pompiers.

Entretien annuel

Avant la saison de chauffage, effectuez un nettoyage en profondeur, inspectez et réparez : Nettoyez la cheminée et le raccord de cheminée à fond.

Vérifiez si la cheminée est abîmée ou usée. Remplacez les sections faibles de la cheminée préfabriquée. Faites faire les réparations par un maçon pour la cheminée maçonnée.

Inspectez le raccord de cheminée et remplacez les sections endommagées. Vérifiez l'usure ou la compression de l'étanchéité et remplacez si nécessaire.

Vérifiez si la vitre est craquelée; remplacez si nécessaire.

Vérifiez si la porte et les poignées ferment bien. Ajustez si nécessaire.

UTILISEZ TOUJOURS DES PIÈCES DE RECHANAGE D'ORIGINE MORSØ

Nettoyage des pièces internes du poêle Morsø

Pour nettoyer les pièces internes du poêle, à l'occasion de la révision annuelle par votre ramoneur, il est conseillé de retirer les pièces intérieures de la chambre de combustion.

Prenez soin des pièces en vermiculite qui sont poreuses. Nettoyez le poêle à froid.

1. Soulevez légèrement le déflecteur inférieur et maintenez-le dans cette position. Dégagez les briques latérales

2. Inclinez une brique latérale et retirez-la de la chambre de combustion.

3. Inclinez l'autre brique latérale et retirez-la de la chambre de combustion

4. Une fois les briques latérales retirées, abaissez le déflecteur inférieur et retirez-le de la chambre de combustion en le soulevant.

5. Retirez le déflecteur supérieur des supports, soulevez-le et sortez-le de la chambre de combustion.

3.4 Périodes prolongées de non-utilisation du poêle

Important:

Si vous n'utilisez pas le poêle pendant une période quelconque, nettoyez-le en profondeur et laissez l'aération légèrement ouvert pour laisser l'air circuler. Assurez-vous que le tuyau ne laisse pas entrer d'eau de pluie près du poêle ; installez un chapeau sur la cheminée mais ne bouchez pas complètement le tuyau.

Ces mesures permettent d'assurer un léger courant d'air dans le poêle et au corps du poêle de rester sec, dans les moindres recoins.

Les cendres laissées dans un poêle qui ne brûle pas attirent l'humidité comme du papier buvard. Si vous laissez l'humidité s'installer dans le poêle, de la rouille se forme. La rouille s'étend dès qu'elle prend prise. Ceci peut entraîner une pression excessive sur les joints du poêle, endommageant ainsi ultérieurement le poêle.

REMARQUE : Il est préférable de nettoyer à fond le poêle à la fin de la saison de chauffage. Ajouter un dessicatif, comme de la litière pour chat, dans le cendrier aide à absorber l'humidité pendant les mois d'été. Assurez-vous de l'enlever avant la saison de chauffage.

Nous vous remercions d'avoir acheté un poêle Morsø

Nous vous souhaitons des années de chaleur sans souci en sa compagnie. Après quelques expérimentations initiales avec les techniques d'alimentation et de fonctionnement, vous trouverez vos habitudes. En cas de problèmes après cette courte phase d'apprentissage, adressez-vous au vendeur de votre poêle. Si celui-ci est dans l'impossibilité de vous aider, veuillez nous contacter par écrit à l'adresse figurant sur la première page de cette publication.

Enregistrement de la garantie du produit droits de garantie

CERTIFICAT DE GARANTIE DE 10 ANS DE MORSØ

Derrière chaque poêle Morsø, il y a plus de 160 ans d'expérience en conception et fabrication de poêles. Le contrôle de la qualité a toujours été au cœur du processus de production, avec des mesures détaillées mises en place à chaque étape clé de fabrication. En conséquence, à condition que le poêle ait été fourni par un revendeur agréé Morsø, Morsø offre une garantie fabricant de 10 ans contre tout défaut de fabrication sur les principales parties extérieures de ses poêles.

Informations sur la Garantie

Garantie limitée

Morsø garantit que le poêle à bois est exempt de défauts matériels et de fabrication en cas d'utilisation et d'entretien normaux, sous réserve des termes et conditions décrits ci-dessous. La période de garantie est valide pendant 10 ans à compter de la date d'achat.

Ce qui est couvert :

Cette garantie couvre le remplacement ou la réparation des pièces présentant des défauts dus à des matériaux ou à une fabrication défectueuse.

Ce qui n'est pas couvert :

La garantie ne couvre pas les dommages résultant de :

- Une installation ou une utilisation incorrecte, non conforme au manuel d'utilisation, y compris en ce qui concerne les réglementations publiques applicables et les instructions d'assemblage et d'allumage de Morsø.
- Des dommages causés par une surchauffe ou l'utilisation de combustibles inappropriés.
- Une usure normale, telle que la décoloration des surfaces. Les pièces d'usure, c'est-à-dire celles qui s'usent lors d'une utilisation normale (par exemple, les plaques de déflecteur de fumée, les grilles, les pierres/réfecteurs réfractaires ainsi que le verre et les matériaux d'étanchéité). Les dispositions de la loi sur les ventes en matière de responsabilité pour défauts s'appliquent à ces pièces.
- Des réparations ou modifications non autorisées par Morsø.
- En cas de manque d'entretien ou de dégradation du traitement de surface du produit, la corrosion peut survenir. La garantie ne couvre pas ces occurrences. Les dispositions de la loi sur les ventes en matière de responsabilité pour défauts s'appliquent également ici.
- Les dysfonctionnements causés par des conditions locales, des problèmes de tirage ou des dommages/défauts de la cheminée.

Conditions d'annulation :

Cette garantie est annulée si ce poêle à bois n'est pas installé, utilisé et entretenu conformément aux instructions fournies dans ce manuel, ou s'il est utilisé pour brûler des matériaux pour lesquels il n'est pas certifié par l'EPA. La garantie est également annulée en cas de modifications non autorisées apportées au poêle.

Comment Faire Valoir Votre Garantie

Pour déposer une réclamation au titre de la garantie, suivez ces étapes :

1. Contactez le service clientèle de Morsø par e-mail à **info@morsoe.com** ou par téléphone au **+45 96691900**.
2. Fournissez les informations suivantes :
 - Preuve d'achat (reçu ou facture)..
 - Numéro de modèle et numéro de série du poêle
 - Une description détaillée du problème, accompagnée de photos si possible.
3. Morsø évaluera la réclamation et, si elle est approuvée, fournira des instructions pour la réparation, le remplacement ou l'entretien.

Pour les termes détaillés de la garantie, veuillez consulter :

Page de Garantie Morsø. <https://morsoe.com/us/customer-service/indoor/warrantystoves>

IMPORTANT!

Comment chauffer en toute sécurité pour l'environnement et pour vous-même!

- **Utiliser uniquement du bois sec**

Utiliser uniquement du bois sec (teneur en humidité max. de 20%) et non traité. Le combustible doit être coupé en deux et faire de 8 à 12 cm d'épaisseur.

- **Allumer**

Allumer avec du bois d'allumage sec (utiliser 1 - 2 kg). Laisser la porte entrouverte et rester à proximité du poêle pendant la phase d'allumage.

- **Obtenir une bonne couche de braises**

S'assurer d'avoir une bonne couche de braises avant d'alimenter le feu. Le bois doit s'allumer en 2 minutes. Si les bûches ne s'allument pas, dans des circonstances extrêmes, cela peut provoquer l'allumage des gaz de combustion, ce qui présente un risque de dommages matériels et de préjudices corporels.

- **Alimenter le feu**

Pour alimenter le feu, utiliser 2 ou 3 morceaux de bois (pas plus de 2 - 2,5 kg).

- **Garantir une ventilation adéquate**

C'est-à-dire des flammes claires et jaunes.

- **Ne jamais laisser brûler toute la nuit**

Félicitations pour l'acquisition de votre nouveau poêle Morsø !

Morsø, le plus important fournisseur sur le marché danois, fabrique des poêles-cheminées de haute qualité depuis 1853. En suivant les présentes instructions, nous sommes persuadés que votre nouveau poêle vous apportera plaisir et satisfaction durant de nombreuses années.

Sommaire

| 1.0 | Installation de votre poêle Morsø | Page no. |
|------------|---|-----------------|
| 1.1 | Vérifier les pièces mobiles dans le poêle | 4 |
| 1.2 | Le système de cheminée/conduit | 5 |
| 1.3 | Connexion du conduit | 6 |
| 1.4 | Connexion à une cheminée déjà en place | 6 |
| 1.5 | Positionnement du poêle | 8 |
| 1.6 | Installation pour mobile home | 10 |
| 2.0 | Fonctionnement | 12 |
| 2.1 | Avant d'allumer le feu | 12 |
| 2.2 | Allumage et intervalles d'alimentation | 14 |
| 3.0 | Entretien | 17 |
| 3.1 | Entretien extérieur | 17 |
| 3.2 | Entretien intérieur | 17 |
| 3.3 | Nettoyage du poêle et du conduit | 19 |
| 3.4 | Périodes prolongées de non-utilisation du poêle | 22 |
| 3.5 | Schéma des pièces détachées | 23 |
| 3.6 | Liste des pièces détachées | 24 |

Avant d'installer et d'utiliser votre nouvel appareil de chauffage, veuillez lire ce manuel en entier. Une mauvaise installation de cet appareil de chauffage peut entraîner un incendie.

Suivez les instructions d'installation pour limiter ce risque d'incendie. Le non-respect des instructions peut entraîner des dommages matériels, corporels ou même mortels.

Contactez l'administration locale de construction concernant les restrictions et équipements d'inspection dans votre région.

Conservez ces instructions

Accessoires en option

Une gamme étendue d'accessoires (tels que gants de manipulation, ustensiles de cheminée, nettoyant pour vitre et peinture résistant à la chaleur) est disponible pour une utilisation adaptée à votre poêle Morsø. Ils facilitent l'entretien et l'utilisation de chaque jour. Contactez votre revendeur Morsø pour plus d'informations.

Le 6100 B de Morsø a été certifié par les services d'inspection PFS TECO. Les standards du test sont UL-1482-2012 (R2015) pour les États Unis et ULC- S627-00 pour le Canada.

Le poêle est répertorié uniquement pour brûler du bois. Ne brûler aucun autre combustible.

U.S. ENVIRONMENTAL PROTECTION AGENCY. Certifié conforme aux normes d'émission de particules de 2020 en utilisant du bois de crèche.

L'émission moyenne de particules en utilisant la méthode de test du bois de crèche EPA Méthode 28 est 1.8 g / h.

Sous conditions spécifiques de test, on a pu constater que le rendement calorifique varie entre 11,892 et 19,067 Btu/hr

Un essai effectué conformément à la norme CSA B415.1 a montré que ce poêle avait un rendement moyen de chauffage supérieur à 74 %.

Ce poêle doit être révisé et réparé périodiquement pour une utilisation correcte. Il est contre la loi fédérale d'utiliser ce poêle contredit les instructions de ce manuel.

La fonte

La fonte n'est pas un matériau inerte. Raison pour laquelle il n'y a pas deux poêles identiques. Ceci en raison des marges de tolérance de la fonte et de la fabrication artisanale des poêles. De fines irrégularités sont normales sur la surface de la fonte.

1.0 Installation de votre poêle Morsø

L'installation doit être conforme à la norme CAN/CSA-B365, Code d'installation des appareils à combustibles solides et du matériel connexe.

Faire des impasses pendant l'installation peut avoir des conséquences, l'installation des poêles à bois doit être sûre et légale.

Si votre poêle Morsø n'est pas installé correctement, cela peut provoquer un incendie. Pour réduire le risque d'incendie, les instructions d'installation doivent être suivies avec soin. Contactez les responsables locaux de la construction au sujet des restrictions et des exigences d'inspection et d'installation dans votre région.

Ne pas installer dans une cheminée.

Avant de commencer l'installation de votre poêle, assurez-vous que :

- Le poêle et le raccord de cheminée sont placés suffisamment loin des matériaux de combustion afin de remplir toutes les conditions d'espacement.
- La protection du sol est adéquate et correctement effectuée conformément aux conditions.

Contactez l'administration locale de construction pour toutes les approbations nécessaires.

La plaque d'informations située à l'arrière du poêle fournit les informations nécessaires concernant les données de test de sécurité, le nom du laboratoire de test agréé et les conditions d'installations.

Les conditions d'installation diffèrent selon les districts et l'administration locale de construction a le pouvoir d'autorisation définitive pour approuver votre installation. Discutez de l'installation avec eux avant de commencer. Pour plus d'informations, contactez votre vendeur.

Ne connectez aucun conduit ou système de distribution d'air.

Important : Si vous ne suivez pas attentivement les instructions d'installation, il peut en résulter des situations dangereuses comme des incendies de cheminée ou de maison. Suivez attentivement les instructions et ne vous en écarter pas car cela peut entraîner des dégâts corporels ou matériels.

1.1 Vérifier les pièces mobiles dans le poêle

Après le déballage, vérifiez que les briques réfractaires sont fermement en place et n'ont pas bougé pendant le transport. Vérifiez également que le contrôle d'air fonctionne librement.

Avant le premier allumage, assurez-vous que le déflecteur est placé correctement.

Accessoires standard

Le gant Morsø et le joint étanche de raccord de tuyau céramique sont des accessoires standard et se trouvent habituellement dans le cendrier ou le foyer.

1.2 Le système de cheminée/conduit

Remarque : le système de conduit doit être sécurisé de façon indépendante et ne doit pas reposer sur le poêle.

Le poêle ne doit pas être raccordé à un conduit de cheminée servant à un autre appareil. (Plusieurs tuyaux peuvent parcourir une seule souche de cheminée ; utilisez un seul tuyau par appareil).

Utilisez une cheminée maçonnée de type résidentiel ou une cheminée d'usine de type HT répertoriée.

Cheminée Haute Température (H.T.) Standard UL-103-1985 (2100° F) pour les États-Unis et Standard Haute Température (650° C) ULC S-629 pour le Canada.

Les dimensions internes du raccord de cheminée et de la cheminée ne doivent pas être inférieures à 6 pouces (150 mm) de diamètre (ou coupe transversale équivalente) et ne doivent être beaucoup plus grandes. Une coupe trop grande a tendance à laisser les gaz du conduit refroidir excessivement, causant ainsi lenteur ou imprévisibilité de fonctionnement du poêle.

Nous conseillons que la longueur de la cheminée est au moins de 16 pieds (4,90 m) (pas indispensable) au-dessus du poêle dans des situations ménagères normales, mesurée du collier de serrage du tuyau à l'extrémité supérieure de la cheminée.

Les conditions locales comme, par exemple, la construction du toit, de gros arbres à proximité et une altitude élevée, peuvent avoir une influence sur le tirage et la hauteur de la cheminée. Veuillez donc contacter les ramoneurs professionnels locaux ou votre concessionnaire Morsø.

N'installez pas la cheminée directement à la sortie du poêle.

Un raccord de cheminée (conduit de fumée) est requis, sauf si l'appareil est spécifiquement approuvé pour ce type d'installation. Un raccord de cheminée est fourni avec le poêle.

Installations typiques de cheminée usine ou maçonnée

1.3 Connexion du conduit

Le poêle est équipé par l'usine d'une plaque ronde détachable bloquant la sortie arrière du tuyau (derrière la plaque de protection arrière). Un collier de serrage de tuyau est placé dans la zone du foyer.

Utilisez un raccord de cheminée bleu ou noir de 24 MSG ou un raccord de cheminée à double paroi répertorié. Reportez-vous aux règlements locaux et aux instructions du fabricant de la che inée concernant les précautions à respecter pour faire passer une cheminée à travers un mur ou un plafond combustible. Pensez à sécuriser le raccord de cheminée avec au moins trois vis au produit et à chaque section contiguë.

Le collier de serrage peut être fixé à la sortie arrière. Détachez simplement en frappant le panneau rond sur la plaque arrière de protection de chaleur pour révéler la plaque en fonte. Retirez la plaque détachable et le collier de serrage du tuyau et changez-les de place. Sécurisez à nouveau en appuyant vers le bas et en serrant les vis incluses.

Positionnez le poêle et connectez le système de conduit.

Portez des gants et des lunettes de protection lors du perçage, coupage ou assemblage des sections du raccord de cheminée.

1.4 Connexion à une cheminée déjà en place

Un raccord de cheminée est le tuyau à double ou simple paroi qui relie le poêle à la cheminée. La cheminée elle-même est la structure maçonnée ou préfabriquée qui contient le tuyau. Les raccords de cheminée permettent de relier le poêle à la cheminée.

Les raccords à double paroi doivent être testés et répertoriés pour une utilisation avec des appareils à combustibles solides. Les raccords à paroi simple doivent être faits en acier de calibre 24 ou plus. N'utilisez pas de raccords galvanisés : ils ne résistent pas aux hautes températures atteintes par la fumée et les gaz d'échappement et qui peuvent dégager des vapeurs toxiques sous grande chaleur. Le raccord doit avoir un diamètre de 6 pouces (150 mm).

Si possible, évitez de faire passer le raccord de cheminée à travers un mur ou un plafond combustible. Si cela est inévitable, référez-vous aux sections sur Traverser les murs.

Ne faites pas passer le raccord à travers un grenier, un placard ou tout espace confiné semblable lors de l'installation des raccords de cheminée.

Il est primordial de garder les gaz du tuyau en déplacement doux dans la bonne direction. Ne déviez pas dans un grand vide à cet endroit ; formez plutôt une section continue jusqu'en haut. Utilisez des courbures moyennes (par ex. 45° au lieu de 90°) plutôt que des angles aigus lorsqu'un changement de direction est nécessaire. Toutes les parties du conduit doivent être accessibles pour des raisons de nettoyage.

Dans les tronçons de cheminée horizontaux, maintenez un espacement de 18 pouces (455 mm) du plafond. Gardez-les aussi courts et directs que possible avec des coudes n'excédant pas 90 degrés. Inclinez les tronçons horizontaux de raccords de ¼ par pied (20mm par mètre) en partant du poêle vers la cheminée. La longueur maximum recommandée d'un tronçon horizontal est de 3 pieds (1 mètre) et la longueur totale ne doit pas dépasser 8 pieds (2,5 mètres).

Les informations sur l'assemblage et l'installation des raccords sont fournies par les instructions du fabricant, comme vous assemblez et fixez le raccord au poêle et à la cheminée.

Assurez-vous que le poêle et le raccord de cheminée installés se trouvent à une distance correcte des matériaux de combustion proches. Voir le paragraphe sur les espacements page 8.

Si le conduit passe au travers d'une paroi ou d'une cloison construite en matériaux inflammables, l'installation doit être conforme à la norme CAN/CSA-B365.

Systèmes de raccord de cheminée et autorisations des appareil de chauffage ménagers à travers les murs inflammables

A. Maçonnerie en briques charpentée d'au moins 3,5 pouces (90 mm) d'épaisseur dans un mur inflammable avec une séparation en brique de 12 pouces (305 mm) minimum de la doublure en argile aux combustibles. La doublure en argile réfractaire doit aller de la surface de la sortie du mur en brique jusqu'à la surface interne de la doublure du tuyau de cheminée mais pas au delà et doit être solidement cimentée en place.

B. Tronçon de cheminée usine répertoriée, à isolation solide, de même diamètre intérieur que le raccord de cheminée et ayant une isolation de 1 pouce (25 mm) ou plus avec un espace d'air minimum de 9 pouces (230 mm) entre le mur extérieur de la longueur de la cheminée et les combustibles.

C. Raccord de cheminée en tôle, minimum calibre 24 en épaisseur, avec un cylindre ventilé minimum calibre 24 en épaisseur ayant deux canaux d'air de 1 pouce (25 mm), séparés des combustibles par au moins 6 pouces (150 mm) d'isolation de fibre de verre. L'ouverture doit être couverte et le cylindre sou tenu soutenu par un support en tôle, minimum calibre 24 en épaisseur.

D. Tronçon de cheminée usine répertoriée, à isolation solide d'un diamètre intérieur plus grand de 2 pouces (50 mm) que le raccord et ayant une isolation de 1 pouce (25 mm) ou plus, servant de traverse pour un raccord de cheminée à simple paroi en tôle d'épaisseur minimum de calibre 24, avec un espace d'air d'au moins 2 pouces (50 mm) entre le mur extérieur de la section de cheminée et les combustibles. La longueur minimum de la section de cheminée doit être de 12 pouces (305 mm) et espacée de 1 pouce (25 mm) du raccord utilisant des plaques de soutien en tôle à chaque extrémité de la section de cheminée. L'ouverture doit être couverte et la section de cheminée soutenue des deux côtés avec des supports en tôle fixés à des murs de calibre 24 épaisseur minimum. Les fixations utilisées pour sécuriser la section de cheminée ne doivent pas pénétrer la doublure du conduit de cheminée.

Assurez-vous que tous les raccords entre les pièces de la cheminée et le poêle soient correctement scellés afin que la cheminée soit hermétique entre le poêle et la sortie de cheminée.

1.5 Positionnement du poêle

Distance avec murs et linteaux

Si le poêle se trouve à proximité de matériaux combustibles, consultez tous les règlements de constructions locaux et nationaux en vigueur en ce qui concernent les espacements. Quels que soient les règlements qui s'appliquent à votre région, n'installez en aucun cas le poêle à moins de 8 pouces (205 mm) des matériaux combustibles sur les côtés et à moins de 16 pouces (405 mm) au-dessus du poêle (des installations des poêles demandent plus d'espacement au-dessus du poêle - voir le graphique des distances en dessous). Il peut s'avérer nécessaire d'augmenter ces distances si les matériaux sont sensibles à la chaleur. Notez également que les papiers peints et autres matériaux de décoration peuvent se détacher sous l'effet de la chaleur. Prenez garde à ce qu'ils ne tombent pas sur le poêle, le cas échéant.

Si le poêle se trouve à proximité de matériaux non combustibles, un espace de 4 pouces (100 mm) ou plus est recommandé pour des raisons de nettoyage et afin d'assurer la circulation de la chaleur autour du poêle et dans toute la pièce.

En cas d'utilisation de la sortie arrière, la protection au sol doit être étendue sous le tuyau de cheminée en dépassant de deux pouces de chaque côté.

Ce poêle est conforme aux exigences de CAN/ULC-S627 et peut être installé sur un sol combustible et ne nécessite pas de protection de sol radiant.

Veuillez lire ci-dessous ce qui concerne la protection du sol contre les chutes de braises.

| F. Du mur du coin au raccord | - |
| G. Du poêle au plafond | 24.5" (622 mm) |
| H. Du sol au plafond | 54" (1372 mm) |

Distance des meubles

La distance minimum recommandée entre le poêle et les meubles est de 30 pouces (760 mm). Veuillez noter que certains meubles sont plus facilement affectés par la chaleur et peuvent par conséquent nécessiter d'être plus éloignés. Ceci est votre responsabilité.

De plus, maintenez tout autre matériau combustible éloignés du poêle. En général, une distance de 30 pouces (760 mm) doit être conservée entre le poêle et les objets inflammables mobiles tels que chiffons, journaux, bois de chauffage, etc.

| EXIGENCES DE PROTECTION DU SOL | MATÉRIEAUX INCOMBUSTIBLES SOUS LE POÊLE | |
|--|---|--------|
| | ÉTATS-UNIS | CANADA |
| A. Distance de prolongement, arrière | - | 200 mm |
| B. Distance de prolongement, côté droit | 6" | 200 mm |
| C. Distance de prolongement, côté gauche | 6" | 200 mm |
| D. Distance de prolongement, avant | 16" | 450 mm |

Sur le sol

Aux États-Unis, la protection de sol doit être réalisée en matériau non combustible et installée de façon à s'étendre sous le poêle ainsi que 16" à l'avant et 6" sur les côtés de la porte de chargement de combustibles et des ouvertures de retrait des cendres.

Au Canada, pour se conformer à la norme CSA B365, Code d'installation des appareils à combustibles solides et du matériel connexe, toute couche de combustible sous l'appareil et/ou dans la zone qui s'étend horizontalement à au moins 450 mm (18 po) au-delà de l'appareil sur les côtés équipés d'une porte, et au moins 200 mm (8 po) au-delà de l'appareil des autres côtés, doit être protégée par une protection de braise continue, durable et non combustible qui assurera une protection totale. La protection contre les braises de 450 mm (18 po) requise de chaque côté d'une porte doit s'étendre sur toute la largeur du poêle plus les 200 mm (8 po) requis de chaque côté de l'unité sans porte. Lorsqu'un poêle est installé à moins de 200 mm (8 po) d'un mur, la protection contre les braises doit seulement s'étendre jusqu'à la base du mur. Une protection contre les braises ne doit pas être placée au-dessus d'un tapis à moins qu'elle ne soit structurellement soutenue pour empêcher le déplacement et la déformation.

1.6 Installation pour mobile home

CANADA : NE PAS INSTALLER DANS UNE CARAVANE / MOBILE HOME

Le poêle Morsø 6100 peut être installé dans un mobile home équipé d'un kit d'air de combustion extérieur et d'un capuchon avec pare-étincelles. Il doit de plus être conforme aux prescriptions suivantes.

- Le poêle doit être fixé de manière sûre à la structure du mobile home avec des boulons dans la plaque du foyer et le sol.
- Le poêle doit être installé avec un raccord de cheminée HT répertorié, une cheminée HT, et un capuchon avec pare-étincelles. Ne jamais utiliser un raccord à paroi simple (tuyau de poêle) dans une installation pour mobile home.
- Les conditions de protection du sol indiquées en section 1.5 doivent être strictement respectées.
- Au Canada, cet appareil doit être relié à une cheminée usine 6 pouces (152 mm) conforme à la norme des cheminées usine CAN/ULC-629M Standard for Factory Built Chimneys. Les conditions de protection du sol indiquée en section 1.5 doivent être suivies, et un Canadian Floor Protector doit être utilisé.
- Suivre les instructions du fabricant de la cheminée et du raccord, lors de l'installation du conduit pour un mobile home.
- Le kit d'air extérieur doit être installé selon le mode d'emploi du kit.
- La conduite d'admission d'air peut être installée par le sol dans l'espace d'accès ventilé ou par la paroi de la résidence, pour obtenir l'air extérieur.
- Installez selon la directive CFR 24, Part 3280 (HUD).
- REMARQUE Les sections supérieures de la cheminée doivent être amovibles de manière à permettre un espacement maximal de 13,5' à partir du niveau du sol, en vue du transport.

Remarque :

Protection de l'acide

En cas de lavage à l'acide de la maçonnerie autour du poêle, protégez la surface du poêle avec une couverture résistante à l'acide.

Entrée d'air frais

A moins que la circulation d'air dans la pièce par les portes, fenêtres et autre soit jugée suffisante, une entrée d'air frais est nécessaire. Cette entrée d'air doit avoir un espace d'air libre de 2 pouces carrés (1250 mm carrés). Ceci est particulièrement important lorsque la pièce est bien scellée ou lorsqu'une hotte aspirante ou un système de ventilation perturbe la pression naturelle de l'air. Une telle entrée d'air ne doit pas se trouver sur un mur habituellement sujet à une pression négative du déplacement habituel du vent. Evitez de placer l'entrée d'air directement à l'opposé du poêle dans la pièce créant ainsi un courant d'air froid.

AVERTISSEMENT

NE JAMAIS TIRER DE L'AIR DE COMBUSTION D'UNE PAROI, DU SOL, D'UN ESPACE DANS LE PLAFOND, NI D'UN ENDROIT CLOS COMME DES COMBLES OU UN GARAGE.
NE PAS INSTALLER DANS UNE CHAMBRE À COUCHER.

ATTENTION

L'INTÉGRITÉ STRUCTURELLE DU SOL, DES PAROIS ET DU PLAFOND/TOIT DU MOBILE HOME DOIT ÊTRE PRÉSERVÉE (NE PAS COUPER DANS UNE POUTRELLE DE SOL, UN TENON DE PAROI, UN SUPPORT DE PLAFOND, ETC.)
NE PAS UTILISER DE GRILLE POUR SURÉLEVER LE FEU – ALLUMER LE FEU DIRECTEMENT DANS LE FOYER.

Détecteurs de monoxyde de carbone

Dans certaines juridictions, l'installation de détecteurs de fumée et d'oxyde de carbone dans les lieux où sont placés des appareils de chauffage est obligatoire. Pour assurer votre sécurité, installez au moins un détecteur de fumée à chaque étage de votre maison. Il devra être placé à distance de l'appareil à bois et à proximité des espaces de repos. En effet, en plaçant un détecteur de fumée trop près du poêle, l'alarme risque de se déclencher si un rejet de fumée intervient lorsqu'on ouvre la porte pour remettre du bois. Suivez les instructions du fabricant de détecteurs de fumée concernant l'emplacement, l'installation et l'entretien.

2.0 Fonctionnement

2.1 Avant d'allumer le feu

Pour une utilisation avec des combustibles solides uniquement. Ne poussez pas trop le feu, si l'appareil ou le raccord de cheminée devient incandescent, le feu est trop fort. Inspectez et nettoyez fréquemment la cheminée. Dans certaines conditions d'utilisation, la formation de créosote peut arriver rapidement. A cause des risques de débordement de fumée et de flammes, opérez uniquement avec la porte fermée.

Attention :

Chaud pendant le fonctionnement. Tenir les enfants, vêtements et meubles éloignés. Risque de brûlures cutanées en cas de contact. Ne pas utiliser de produits chimiques ni de liquides pour l'allumage. Ne pas brûler de déchets ni de liquides inflammables.

Ne pas utiliser d'essence, de pétrole à lampe, de kérosène, d'allumeur ou de liquide à charbon de bois ou tout autre liquide pour démarrer ou relancer un feu dans ce poêle.

Tenir tous ces liquides éloignés du poêle pendant son fonctionnement.

Ne brûlez pas :

- Ordures;
- Déchets de pelouse ou de jardin;
- Matériaux contenant du caoutchouc, y compris les pneus;
- Matériaux contenant du plastique;
- Produits pétroliers usagés, peintures ou diluants pour peinture, ou produits à base d'asphalte;
- Matériaux contenant de l'amiante;
- Débris de construction ou de démolition;
- Traverses de chemin de fer ou bois traité sous pression;
- Fumier ou restes d'animaux;
- Bois flotté d'eau salée ou autres matériaux précédemment saturés d'eau salée;
- Bois non bien sec; ou
- Produits en papier, carton, contreplaqué ou panneaux de particules. L'interdiction de brûler ces matériaux n'interdit pas l'utilisation d'allume-feu fabriqués à partir de papier, carton, sciure, cire et substances similaires dans le but d'allumer un feu dans un poêle à bois concerné.

Brûler ces matériaux peut entraîner la libération de fumées toxiques ou rendre le poêle inefficace et causer de la fumée.

Choisir votre combustible

Vous pouvez brûler tous les types de bois naturel dans ce poêle mais ils doivent être bien secs. Une fois coupé en longueur, couper le bois en deux - conformément aux dimensions mentionnées ci-dessous - pour permettre à l'humidité de s'évaporer.

Couper le bois à une longueur maximale de 12 pouces (30 cm) et d'un diamètre d'environ 3 à 3,5 pouces (7 à 8 cm). Si vous pouvez peser votre bois, comptez environ 1,0 kg. Pour une combustion optimale et un bon dégagement de chaleur, le bois doit pas contenir plus de 20% d'humidité; ceci peut facilement être contrôlé à l'aide de l'hygromètre Morsø (article #62929900)

Stockez les bûches couvertes dans un endroit bien aéré, où l'air peut circuler entre les bûches. Certains bois tendres peuvent n'avoir besoin que d'un bel été pour sécher, alors que certains bois plus durs, comme p.ex. le chêne, l'érable et l'orme peuvent prendre jusqu'à 18 mois. Éviter du bois trop sec, souvent d'une couleur tirant sur le gris, car dans certaines conditions, cela peut poser des problèmes de rendement tels que lenteur et projection d'étincelles. Un bois bien sec est léger à manipuler et présente des fentes du centre vers les extrémités. Si votre bois crépite ou grésille en brûlant et que de la suie persiste à se former sur la porte vitrée du poêle, votre bois n'est pas suffisamment sec.

N'utilisez jamais de dérive (de la mer) dont le contenu salé peut entraîner de la corrosion, ni du bois de construction pouvant être imprégné de produits chimiques.

Pour optimiser la performance

Brûler du bois humide a un effet négatif sur le rendement de l'appareil.

L'efficacité du poêle à bois est principalement influencée par son emplacement. Le poêle est principalement conçu pour chauffer la pièce où il est installé.

Espace de vie principal. Placer le poêle à bois dans l'espace de vie principal maximise l'efficacité, car il chauffe directement l'espace où l'on passe le plus de temps.

Sous-sol. Installer le poêle au sous-sol peut être moins efficace si la chaleur ne circule pas adéquatement vers les niveaux supérieurs. Une bonne isolation et une gestion appropriée de la circulation de l'air sont cruciales pour un chauffage efficace.

Extérieur par des températures glaciales. Utiliser le poêle à bois à l'extérieur dans des conditions très froides réduit considérablement l'efficacité. Le poêle doit travailler plus dur pour maintenir la chaleur, ce qui entraîne une consommation accrue de combustible et un chauffage moins efficace.

Attention: Ne placez pas de combustible dans l'espacement libre requis à proximité du poêle ni dans l'espace destiné au chargement du combustible ou au vidage des cendres.

Allumage

Au début, faites un petit feu pour que la peinture s'accoutume et que les plaques principales du poêle se mettent en place. La peinture peut dégager des vapeurs. Aérez la pièce pendant cette phase. Le réglage de l'aération, les techniques d'allumage et les intervalles d'alimentation dépendent du tirage de la cheminée, du combustible utilisé, de la chaleur voulue, etc. Quelques techniques de base sont soulignées ci-dessous.

IMPORTANT

Pour assurer une combustion correcte et éviter de bloquer le flux d'air, gardez toujours la charge de combustible en dessous de la boîte d'alimentation en air secondaire en acier inoxydable située sur la paroi arrière du foyer. L'espace devant et au-dessus de la boîte d'alimentation en air est réservé uniquement à la combustion des gaz volatils.

En principe:

Votre poêle est équipé d'entrées d'air primaire et secondaire.

L'air primaire est contrôlé grâce au levier situé sous le rebord à cendres du poêle. Pour ouvrir l'admission d'air, déplacer le levier de contrôle vers le bas. De l'air préchauffé pénètre alors dans la chambre de combustion via le système de " nettoyage d'air " situé à l'intérieur du poêle et au dessus de la vitre.

L'air secondaire arrive vers la chambre de combustion grâce au déflecteur spécialement conçu, situé derrière la chambre de combustion. L'air secondaire est injecté dans les gaz du conduit à la fois au dessus et en face du feu, rendant ainsi le processus de combustion plus propre et plus efficace. L'admission d'air secondaire est constamment ouverte et n'est pas réglable.

Pour plus de sécurité, votre poêle est équipé d'une poignée amovible.

2.2 Allumage et intervalles d'alimentation

Le premier allumage du poêle nécessite un volume d'air important. Lorsque le poêle est froid, laissez la porte entrouverte de 2 ou 3 cm pendant les premières minutes et ouvrez complètement l'entrée d'air primaire. Ne laissez pas le poêle sans surveillance tant que la porte est ouverte.

Afin de constituer un lit de cendres raisonnable au fond du poêle, utilisez 2 à 4 livres de petit bois sec lors du premier allumage. Maintenez en permanence une couche de 1 à 1,5 pouces (2 à 3 cm) de cendres au fond de la chambre de combustion à chaque fois.

1. Lorsqu'on allume un poêle à bois, il est recommandé d'utiliser la méthode d'allumage Top Down. C'est la méthode d'allumage la plus respectueuse de l'environnement. Pour obtenir rapidement la formation d'une couche de braises, utiliser pour l'allumage 2 sachets allume-feu, ainsi que 1,5 kg environ de bois d'allumage. Poser les allume-feu juste en-dessous de la couche supérieure de petit bois.

Il est important de commencer avec précaution, de telle sorte que la combustion se développe lentement. De cette manière, la formation de suie sur la vitre est faible. En effet, l'encrassement de la vitre est souvent dû à une combustion trop violente et au fait que les flammes entrent en contact avec des surfaces froides. En évitant la formation de suie lors de l'allumage et en faisant en sorte d'obtenir une couche de braises chaudes, la formation de suie sera minime lors des étapes suivantes d'alimentation

2. Ouvrez complètement le régulateur d'air secondaire..

3. Allumez le feu.

4. Après l'allumage, fermez partiellement les portes en les laissant entrouverte de 1 ou 2 pouces pour laisser entrer suffisamment d'air de combustion.

5. Lorsque la cheminée est chaude après 5 à 10 minutes, fermez les portes. Un lit de braises convenable se forme au bout de 15 à 20 minutes.

6. Au moment de recharger, repartez les braises dans le foyer en les rapprochant surtout vers l'avant du poêle. Nous vous recommandons d'utiliser une charge de carburant avec un poids de 3 lb (2 pièces) et jusqu'à 6 lb (5 pièces). Toujours garder la charge de carburant sous le secondaire boîte à air en acier inoxydable. L'espace devant et au-dessus de la boîte à air est réservé à la combustion de gaz volatils.

7. Poser 2-5 morceaux de bois (2 à 6livres) d'environ 20 cm de longueur sur les braises. Laissez ½ pouce (1 cm) ou plus entre chaque morceau.

8. Fermez la porte et laissez l'entrée d'air primaire complètement ouverte. Si le feu ne s'allume pas, entrouvrez légèrement la porte pour permettre à la quantité d'air nécessaire d'enflammer le bois. Refermez la porte une fois que le feu a pris.

9. Après quelques minutes, réglez l'entrée d'air primaire en fonction de la chaleur voulue. Veillez à ce qu'il y ait toujours assez d'air pour que les flammes restent claires une fois la quantité d'air de combustion réduite et pendant toute la combustion. Si vous utilisez le taux de combustion minimum (poignée du régulateur d'air complètement déplacée vers la gauche), laissez le feu s'établir correctement en brûlant à un taux de combustion moyen pendant environ 15 minutes au préalable. Déplacez la poignée du régulateur d'air de la position fermée à une position intermédiaire pour atteindre un taux de combustion moyen

10. Anticipez chaque alimentation et souvenez-vous de n'ajouter qu'une modeste couche de bois tant qu'il y a beaucoup de braises. Reprenez les points 6 à 9.

N'essayez en aucun cas d'accroître le feu de votre poêle en modifiant le réglage du contrôle d'air décrit dans ces instructions.

Attention : Les poêles à feu de bois ne doivent jamais être laissés sans surveillance la porte ouverte.

Cet appareil de chauffage à bois a un taux de combustion minimal inférieur fixé par le fabricant et qu'il convient de ne pas modifier. Les règles fédérales interdisent de modifier ce réglage ou d'effectuer sur ce poêle toute autre intervention contrevenant aux instructions de service figurant dans le présent manuel

Si vous laissez les portes entrouvertes, gaz et flammes peuvent sortir du foyer par l'ouverture, créant ainsi des risques d'incendie et de fumée. Nous vous conseillons d'installer un détecteur de fumée dans la pièce où vous installez le poêle.

NE PROVOQUER JAMAIS DE SURCHAUFFE. Toute surchauffe peut entraîner un incendie ou des dégâts permanents pour le poêle. Si n'importe quelle pièce du poêle devient incandescente, vous êtes en surchauffe.

Le poids maximal de bois recommandé par charge est de 3 kg/h/6 lbs (environ 5 bûches).

Dans des conditions de chauffage normales, la température moyenne à l'intérieur du tuyau du poêle, mesurée à 20 cm au-dessus du poêle est d'env. 300° C (550°F). La température maximale dans le tuyau du poêle ne doit pas excéder 450° C (750°F). Une température du poêle dépassant 450°C (750°F) est considérée comme surchauffe et peut être la cause d'une usure prématurée du poêle.

Pour permettre de mesurer correctement la température de fonctionnement de votre poêle, nous recommandons l'utilisation du Thermomètre à gaz pour poêle Morsø (article # 62901200). Le Thermomètre à gaz pour poêle est magnétique; il se fixe sur le tuyau du poêle, à environ 20 cm (8") au-dessus de la plaque supérieur du poêle, et mesure la température de surface du tuyau du poêle. Disponible auprès de votre distributeur Morsø agréé.

Conditions de tirage

Si de la fumée ou des émanations se dégagent du poêle lors de l'allumage et de l'alimentation ou si tout simplement le feu ne prend pas, ceci est sûrement dû à un faible tirage. (Dans très peu de cas, pas assez d'air frais entre dans la pièce – voir les conseils d'installation plus haut). Demandez conseil à votre vendeur pour savoir comment améliorer votre système de tuyauterie pour accroître le tirage.

Règles de feu de bois

Pour avoir moins de chaleur, mettez moins de bûches dans le poêle et réduisez la quantité d'air. Il est toujours important de maintenir une bonne couche de braises.

Moins de chaleur – moins de bois – moins d'air

Plus de chaleur – plus de bois – plus d'air

Des dépôts de suie se font sur la vitre si le poêle fonctionne trop lentement ou si votre bois n'est pas assez sec.

Il est fortement conseillé de ne pas laisser le poêle allumé pendant la nuit. En plus des effets nocifs sur l'environnement, le rendement du bois serait mauvais puisque les gaz qu'il contient ne s'enflamment pas à basse température mais se fixent sous forme de suie (gaz non consommés) dans la cheminée et le poêle.

3.0 Entretien

Lors de l'entretien de votre poêle, portez toujours des lunettes et des gants de protection.

3.1 Entretien extérieur

La surface du poêle est peinte avec la peinture résistant à la chaleur Senotherm. Nettoyez de préférence avec un aspirateur équipé d'un embout à brosse souple ou en essuyant avec un chiffon anti-peluche.

Au bout d'un certain temps, la surface peinte peut devenir légèrement grise. Vous pouvez trouver une boîte de peinture en spray pour retouche Morsø chez votre revendeur. Il suffit de quelques minutes – en suivant les instructions- pour l'appliquer. Lors du premier allumage après une retouche, une légère odeur peut se dégager du poêle le temps de l'accoutumance de la peinture. Assurez-vous de bien aérer la pièce pendant cette période.

3.2 Entretien intérieur

Vitre

Si le poêle est généralement utilisé aux températures correctes, la vitre ne devrait être que peu ou pas sale. Si de la saleté se dépose lors de l'allumage, la majeure partie brûlera au fur et à mesure que la température augmente. En cas de dépôts plus importants qui ne brûlent pas, utilisez le nettoyant pour vitres Morsø. Appliquez sur la vitre froide en suivant les instructions. N'utilisez jamais de nettoyeurs abrasifs sur la surface vitrée.

Causes possibles de vitre sale

- Combustible trop humide
- Bûches trop grandes ou non fendues
- Température de combustion trop basse

**Ne pas nettoyer le verre lorsqu'il est chaud
Remplacez immédiatement toute vitre cassée.**

N'utilisez pas votre poêle si la vitre de la porte est endommagée.

Si vous devez changer la vitre, utilisez du verre céramique à haute température fourni par Morsø. Contactez votre concessionnaire Morsø.

Installer la vitre

N'installez jamais la vitre lors du fonctionnement du poêle.

Remplacement du vitre céramique

Le vitre céramique ne peut pas être recyclé, car sa température de fusion est trop élevée. Si le vitre céramique est mélangé au verre normal, la matière première est dénaturée et le processus de recyclage du vitre peut être interrompu. Veillez à ce que le vitre réfractaire ne soit pas traité comme matériau à recycler normal. Vous contribuerez beaucoup à la protection de l'environnement.

ATTENTION ! Doit être déposé comme vitre céramique dans une station de collecte des déchets.

1. Soulevez la porte pour la sortir de ses gonds et posez-la face avant vers le bas sur des cartons ou tout autre tissu non abrasif.
2. Dévissez les quatre boulons qui maintiennent la vitre. (Au cas où un boulon se casserait lors du dévissage, retirer le reste du boulon en perçant au centre avec une mèche de perceuse acier grande vitesse de 1/8 de pouce (3 mm). Des mèches plus petites peuvent également convenir mais n'utilisez en aucun cas de mèche plus grande. Assurez-vous que la mèche ne touche pas les bords du boulon – ceci pouvant endommager le filetage dans la fonte).
3. Retirez le joint d'étanchéité en céramique usagé et nettoyez la surface en dessous avec de la paille de fer ou du papier de verre pour éliminer les particules.
4. Mettez en place le nouveau joint d'étanchéité tout autour de l'emplacement de la vitre en vous assurant de bien le pincer tout le long de façon à faire un joint continu. Ne laissez aucun espace.
5. Placez la nouvelle vitre sur les bandes et revissez les boulons et équipements à la main.
6. Enfin, donnez environ un demi-tour supplémentaire aux boulons. La vitre doit être tenue assez fermement de manière à ne pas bouger pendant le nettoyage. Ne vissez pas les boulons trop fort car cela entraîne une pression excessive sur la vitre risquant de la casser. Important !

Afin de réduire le risque de casser la vitre, évitez de frapper sur la vitre ou de claquer la porte.

Pièces de rechange intérieures

L'équipement feu – comprenant le cendrier, la grille, les briques réfractaires, plaques de fonte pour protection feu, la vitre, le déflecteur et le collier de serrage du tuyau – est soumis à une chaleur extrême produite par le feu. De temps en temps, il peut s'avérer nécessaire de remplacer une de ces pièces pour des raisons d'entretien routinier.

REMARQUE : L'équipement feu, la corde céramique et la finition de peinture ne sont pas couverts par la garantie.

Toutes ces pièces de rechange sont en vente chez votre concessionnaire Morsø et nous vous recommandons de remplacer toute pièce endommagée aussi tôt que possible afin d'éviter des dégâts supplémentaires.

Si le déflecteur est déformé par une surchauffe, le poêle continue à fonctionner même si sa performance peut être compromise. Remplacez-le dès que possible.

Causes possibles d'usure interne rapide

Feu fort et persistant

Accumulation de suie et de cendres

Joint d'étanchéité

Le joint entourant le périmètre des portes peut durcir avec le temps. Remplacez-les s'il devient difficile de fermer les portes ou si l'air commence à s'infiltrer autour des portes, causant ainsi un feu un peu moins contrôlable. Un jeu de joint Morsø est en disponible chez votre revendeur.

3.3 Nettoyage du poêle et du conduit

Vérifiez la présence de suie au-dessus de la plaque du déflecteur et autour de la sortie du tuyau environ tous les mois pour commencer. Si le poêle devient soudain lent, regardez si de la suie est tombée autour du collier de serrage du tuyau ou dans le tuyau/ la cheminée.

Effectuez une inspection de la cheminée et du raccord de cheminée au moins tous les deux mois pendant la saison de chauffage pour détecter la formation éventuelle de crésote. S'il y a de crésote il faut l'éliminer pour réduire le risque d'un feu de cheminée.

Élimination des cendres

Videz les cendriers quotidiennement ou selon les besoins. Si vous laissez des cendres s'accumuler en dessous de la grille, la chaleur est piégée et cela peut entraîner un mauvais fonctionnement prématuré de la grille.

Videz le cendrier selon cette procédure :

Ouvrez les portes avant et utilisez une pelle ou un tisonnier pour remuer l'excès de cendres et la faire tomber dans les cendriers à travers les fentes de la grille. Retirez le cendrier en prenant soin de bien le tenir horizontal.

Jetez les cendres dans un récipient en métal avec un couvercle hermétique.

Placez le récipient fermé contenant les cendres sur un sol non inflammable ou sur la terre, bien éloigné de tout matériau combustible en attendant l'enlèvement définitif. Si vous vous débarrassez des cendres en les enterrant ou en les dispersant, gardez-les dans le récipient fermé jusqu'à leur refroidissement complet. Remettez le cendrier en place et fermez le poêle.

Attention :

Ne jamais vider un poêle en train de fonctionner.

Ne jamais utiliser votre aspirateur ménager ou professionnel pour enlever les cendres du poêle ; toujours éliminer les cendres correctement.

Crésote – Formation et élimination.

Lorsque le bois brûle lentement, il produit du goudron et d'autres vapeurs organiques qui s'associent avec l'humidité émise pour former du crésote. Les vapeurs de crésote se condensent dans le conduit de cheminée relativement froid lors d'un feu brûlant faiblement. Il en résulte que les résidus de crésote s'accumulent sur la paroi du tuyau. Une fois enflammé, le crésote crée un feu extrêmement chaud.

Vérifiez la cheminée et le conduit de cheminée au moins tous les deux mois pendant la saison de chauffage pour contrôler l'absence de formation de crésote. En cas de dépôt de crésote, éliminez-le pour diminuer le risque de feu de cheminée.

Ramontage de la cheminée

Inspectez le système régulièrement au cours de la saison de chauffage comme partie intégrante d'un programme d'entretien régulier. Pour inspecter la cheminée, laissez le poêle refroidir complètement. Puis, à l'aide d'un miroir, regardez par le collier du tuyau dans le conduit de cheminée. Si vous ne pouvez pas inspecter le système de conduit de cette façon, déconnectez le poêle pour faciliter l'accès.

Nettoyez la cheminée à l'aide d'une brosse de la même forme et taille que le tuyau. Faites coulisser la brosse de haut en bas et inversement dans le conduit afin de faire tomber tous les dépôts en bas de la cheminée où vous pouvez les évacuer grâce à la porte de nettoyage.

Nettoyez le raccord de cheminée en déconnectant les sections, mettez-les à l'extérieur et éliminez tous les dépôts avec une brosse dure. Remettez les sections du raccord en place après le nettoyage en vous assurant de sécuriser les joints entre chaque section avec des vis en tôle. Si vous ne pouvez pas inspecter ou nettoyer la cheminée vous-même, contactez votre concessionnaire Morsø ou un ramoneur professionnel.

En cas de feu de cheminée, agissez rapidement et :

1. Fermez le contrôle d'air.
2. Faites sortir tout le monde de la maison.
3. Appelez les pompiers.

Entretien annuel

Avant la saison de chauffage, effectuez un nettoyage en profondeur, inspectez et réparez : Nettoyez la cheminée et le raccord de cheminée à fond.

Vérifiez si la cheminée est abîmée ou usée. Remplacez les sections faibles de la cheminée préfabriquée. Faites faire les réparations par un maçon pour la cheminée maçonnée.

Inspectez le raccord de cheminée et remplacez les sections endommagées.

Vérifiez l'usure ou la compression de l'étanchéité et remplacez si nécessaire.

Vérifiez si la vitre est craquelée; remplacez si nécessaire.

Vérifiez si la porte et les poignées ferment bien. Ajustez si nécessaire.

UTILISEZ TOUJOURS DES PIÈCES DE RECHANGE D'ORIGINE MORSØ

Nettoyage des pièces internes du poêle Morsø

Pour nettoyer les pièces internes du poêle, à l'occasion de la révision annuelle par votre ramoneur, il est conseillé de retirer les pièces intérieures de la chambre de combustion.

Prenez soin des pièces en vermiculite qui sont poreuses. Nettoyez le poêle à froid.

1. Soulevez légèrement le déflecteur inférieur et maintenez-le dans cette position. Dégagez les briques latérales

2. Inclinez une brique latérale et retirez-la de la chambre de combustion.

3. Inclinez l'autre brique latérale et retirez-la de la chambre de combustion

4. Une fois les briques latérales retirées, abaissez le déflecteur inférieur et retirez-le de la chambre de combustion en le soulevant.

5. Retirez le déflecteur supérieur des supports, soulevez-le et sortez-le de la chambre de combustion.

3.4 Périodes prolongées de non-utilisation du poêle

Important:

Si vous n'utilisez pas le poêle pendant une période quelconque, nettoyez-le en profondeur et laissez l'aération légèrement ouvert pour laisser l'air circuler. Assurez-vous que le tuyau ne laisse pas entrer d'eau de pluie près du poêle ; installez un chapeau sur la cheminée mais ne bouchez pas complètement le tuyau.

Ces mesures permettent d'assurer un léger courant d'air dans le poêle et au corps du poêle de rester sec, dans les moindres recoins.

Les cendres laissées dans un poêle qui ne brûle pas attirent l'humidité comme du papier buvard. Si vous laissez l'humidité s'installer dans le poêle, de la rouille se forme. La rouille s'étend dès qu'elle prend prise. Ceci peut entraîner une pression excessive sur les joints du poêle, endommageant ainsi ultérieurement le poêle.

REMARQUE : Il est préférable de nettoyer à fond le poêle à la fin de la saison de chauffage. Ajouter un dessicatif, comme de la litière pour chat, dans le cendrier aide à absorber l'humidité pendant les mois d'été. Assurez-vous de l'enlever avant la saison de chauffage.

Nous vous remercions d'avoir acheté un poêle Morsø

Nous vous souhaitons des années de chaleur sans souci en sa compagnie. Après quelques expérimentations initiales avec les techniques d'alimentation et de fonctionnement, vous trouverez vos habitudes. En cas de problèmes après cette courte phase d'apprentissage, adressez-vous au vendeur de votre poêle. Si celui-ci est dans l'impossibilité de vous aider, veuillez nous contacter par écrit à l'adresse figurant sur la première page de cette publication.

Enregistrement de la garantie du produit droits de garantie

CERTIFICAT DE GARANTIE DE 10 ANS DE MORSØ

Derrière chaque poêle Morsø, il y a plus de 160 ans d'expérience en conception et fabrication de poêles. Le contrôle de la qualité a toujours été au cœur du processus de production, avec des mesures détaillées mises en place à chaque étape clé de fabrication. En conséquence, à condition que le poêle ait été fourni par un revendeur agréé Morsø, Morsø offre une garantie fabricant de 10 ans contre tout défaut de fabrication sur les principales parties extérieures de ses poêles.

Informations sur la Garantie

Garantie limitée

Morsø garantit que le poêle à bois est exempt de défauts matériels et de fabrication en cas d'utilisation et d'entretien normaux, sous réserve des termes et conditions décrits ci-dessous. La période de garantie est valide pendant 10 ans à compter de la date d'achat.

Ce qui est couvert :

Cette garantie couvre le remplacement ou la réparation des pièces présentant des défauts dus à des matériaux ou à une fabrication défectueuse.

Ce qui n'est pas couvert :

La garantie ne couvre pas les dommages résultant de :

- Une installation ou une utilisation incorrecte, non conforme au manuel d'utilisation, y compris en ce qui concerne les réglementations publiques applicables et les instructions d'assemblage et d'allumage de Morsø.
- Des dommages causés par une surchauffe ou l'utilisation de combustibles inappropriés.
- Une usure normale, telle que la décoloration des surfaces. Les pièces d'usure, c'est-à-dire celles qui s'usent lors d'une utilisation normale (par exemple, les plaques de déflecteur de fumée, les grilles, les pierres/réfecteurs réfractaires ainsi que le verre et les matériaux d'étanchéité). Les dispositions de la loi sur les ventes en matière de responsabilité pour défauts s'appliquent à ces pièces.
- Des réparations ou modifications non autorisées par Morsø.
- En cas de manque d'entretien ou de dégradation du traitement de surface du produit, la corrosion peut survenir. La garantie ne couvre pas ces occurrences. Les dispositions de la loi sur les ventes en matière de responsabilité pour défauts s'appliquent également ici.
- Les dysfonctionnements causés par des conditions locales, des problèmes de tirage ou des dommages/défauts de la cheminée.

Conditions d'annulation :

Cette garantie est annulée si ce poêle à bois n'est pas installé, utilisé et entretenu conformément aux instructions fournies dans ce manuel, ou s'il est utilisé pour brûler des matériaux pour lesquels il n'est pas certifié par l'EPA. La garantie est également annulée en cas de modifications non autorisées apportées au poêle.

Comment Faire Valoir Votre Garantie

Pour déposer une réclamation au titre de la garantie, suivez ces étapes :

1. Contactez le service clientèle de Morsø par e-mail à **info@morsoe.com** ou par téléphone au **+45 96691900**.
2. Fournissez les informations suivantes :
 - Preuve d'achat (reçu ou facture)..
 - Numéro de modèle et numéro de série du poêle
 - Une description détaillée du problème, accompagnée de photos si possible.
3. Morsø évaluera la réclamation et, si elle est approuvée, fournira des instructions pour la réparation, le remplacement ou l'entretien.

Pour les termes détaillés de la garantie, veuillez consulter :

Page de Garantie Morsø. <https://morsoe.com/us/customer-service/indoor/warrantystoves>

IMPORTANT!

Comment chauffer en toute sécurité pour l'environnement et pour vous-même!

- **Utiliser uniquement du bois sec**

Utiliser uniquement du bois sec (teneur en humidité max. de 20%) et non traité. Le combustible doit être coupé en deux et faire de 8 à 12 cm d'épaisseur.

- **Allumer**

Allumer avec du bois d'allumage sec (utiliser 1 - 2 kg). Laisser la porte entrouverte et rester à proximité du poêle pendant la phase d'allumage.

- **Obtenir une bonne couche de braises**

S'assurer d'avoir une bonne couche de braises avant d'alimenter le feu. Le bois doit s'allumer en 2 minutes. Si les bûches ne s'allument pas, dans des circonstances extrêmes, cela peut provoquer l'allumage des gaz de combustion, ce qui présente un risque de dommages matériels et de préjudices corporels.

- **Alimenter le feu**

Pour alimenter le feu, utiliser 2 ou 3 morceaux de bois (pas plus de 2 - 2,5 kg).

- **Garantir une ventilation adéquate**

C'est-à-dire des flammes claires et jaunes.

- **Ne jamais laisser brûler toute la nuit**

By appointment to The Royal Danish Court

morsø

Morsø Jernstøberi A/S -03.12.2024 - 72611700

Manufactured by: Morsø
Model: 6140 B, 6143 B, 6148 B, 6170 B

U.S. ENVIRONMENTAL PROTECTION AGENCY

Certified to comply with 2020 particulate emission standards using crib wood.

THIS MODEL

SMOKE

EFFICIENCY

Particulate emission using EPA Method 28R test method:

Emission

1.8 g/h

Wood heaters with higher efficiencies cost less to operate.

HEAT OUTPUT

11,892 to 19,067 Btu/Hr

Use this to choose the right size appliance for your needs.
ASK DEALER FOR HELP

This wood heater needs periodic inspection and repair for proper operation. Consult the owner's manual for further information. It is against federal regulations to operate this wood heater in a manner inconsistent with the operating instructions in the owner's manual.

CAUTION

HOT WHILE IN OPERATION - DO NOT TOUCH, KEEP CHILDREN, CLOTHING AND FURNITURE AWAY. CONTACT MAY CAUSE SKIN BURNS - SEE NAMEPLATE AND INSTRUCTIONS.

KEEP FURNISHINGS AND COMBUSTIBLE MATERIAL A CONSIDERABLE DISTANCE AWAY FROM THE APPLIANCE. DO NOT OVERFIRE. IF HEATER OR CHIMNEY CONNECTOR GLOWS, YOU ARE OVERFIRING.

ATTENTION

TRÈS CHAUD LORSQU'IL FONCTIONNE - NE PAS TOUCHER, ÉLOIGNEZ LES ENFANTS, LES VÊTEMENTS ET LES MEUBLES. TOUT CONTACT PEUT CAUSER DES BRÛLURES - VOIR PLAQUE SIGNALÉTIQUE ET INSTRUCTIONS.

LES MEUBLES ET LES MATÉRIAUX COMBUSTIBLES DOIVENT ÊTRE DISPOSÉS À UNE DISTANCE SUFFISANTE DE L'INSTALLATION. NE PAS SURCHAUFFER. SI LE POÊLE OU LE TUYAU DE CHEMINÉE ROUGISSENT, IL Y A SURCHAUFFE

PREVENT HOUSE FIRES:

Install and use only in accordance with manufacturer's installation and operating instructions and local codes. Contact local building or fire officials about restrictions and installation inspection in your area. In absence of any local codes, installation must meet minimum requirements of NFPA 211 in USA, and B365 in Canada. Refer to manufacturer's instructions and local codes for precautions required for passing chimney through a combustible wall or ceiling. Inspect and clean chimney system frequently in accordance with manufacturer's instructions. For use with solid wood fuel only. Do not connect this unit to a chimney flue serving another appliance.

Do not use grate or elevate fire. Build wood fire directly on hearth. Use a residential type masonry or listed type HT factory-built chimney. High Temperature (H.T.) Chimney Standard UL-103-1985 (2100° F.) for the USA, and High Temperature (650°C) Standard ULC S-629 for Canada. **NOTE:** Replace glass only with factory supplied ceramic. Operate only with door closed. Do not operate with start device open or ajar. Do not obstruct beneath the heater

PREVENT CREOSOTE FIRES: Inspect and clean chimney frequently. Under certain conditions of use creosote buildup may occur rapidly.

CAUTION: Fully open combustion air control before opening the fuel feed door.

PRÉVENTION DES FEUX DE MAISON:

Installez et utilisez seulement en accord avec les instructions d'installation et d'opération du manufacturier et des codes locaux. Contactez les autorités locales en charge des constructions et de la prévention contre le feu au sujet des restrictions et l'inspection des installations dans votre région. Dans l'absence des codes locaux, l'installation doit être conforme aux exigences de NFPA 211 aux États-Unis, et B365 au Canada. Référez-vous aux instructions du manufacturier et des codes locaux pour les précautions exigées pour passer une cheminée à travers un mur ou un plafond combustibles. Inspectez et nettoyez le système de la cheminée fréquemment en accord avec les instructions du manufacturier. Pour une utilisation avec des combustibles solides uniquement. Ne pas brancher cette unité à une cheminée utilisée pour une autre installation.

N'utilisez pas un âtre et n'élevez pas la feu. Édifiez le bois de feu directement sur le foyer. Utilisez une cheminée maçonnée de type résidentiel ou une cheminée préfabriquée répertoriée de type HT. Cheminée Haute Température (HT), norme UL-103-1985 (2100 °F) pour les États-Unis et Haute Température (650 °C), norme ULC S-629 pour le Canada. **NOTE:** Remplacez la vitre seulement avec de la céramique fournie par l'usine. Opérez seulement avec la porte fermée. Ne pas opérer si le démarreur d'opération est ouvert ou entrouvert.

Ne pas obstruer sous le poêle. **PRÉVENEZ LES FEUX DE CRÉOSOTE:** Inspectez et nettoyez la cheminée fréquemment. Sous certaines conditions d'usage, le résidu de créosote peut se faire rapidement.

AVIS: Ouvrez complètement le contrôle d'air de combustion avant d'ouvrir la porte du foyer.

FREESTANDING INSTALLATION

STANDARD RESIDENTIAL FREESTANDING INSTALLATIONS REQUIRE: 6" diameter, minimum 24 MSG black or 26 MSG blued steel connector, with listed (type UL103 HT or ULC S629) factory-built chimney, suitable for use with solid fuel or masonry chimney. / POUR LES INSTALLATIONS RÉSIDENTIELLES: Utiliser un connecteur de cheminée de 6" de diamètre, en acier noir de minimum 24 MSG ou en acier bleu de minimum 26 MSG vers une cheminée préfabriquée homologuée (type UL103 HT ou ULC S629) ou vers une cheminée maçonnée.

U.S. ENVIRONMENTAL PROTECTION AGENCY

Certified to comply with 2020 particulate emission standards using crib wood. This wood heater needs periodic inspection and repair for proper operation. Consult the owner's manual for further information. It is against federal regulations to operate this wood heater in a manner inconsistent with the operating instructions in the owner's manual. Test results using EPA Method 28 crib wood test method:

Certifié conforme aux normes EPA de 2020 les émissions de particules solides utilisant le bois de crèche. Ce poêle doit être révisé et réparé périodiquement pour une utilisation correcte. Il est contre la loi fédérale d'utiliser ce poêle contredit les instructions de ce manuel. Résultats des tests utilisant la méthode d'essai EPA Méthode 28R:

SFBA EMISSIONS AND EFFICIENCY TESTING LABORATORY OPERATING PROCEDURE

INTRODUCTION

This document provides a step-by-step guide for the technician conducting tests to EPA standard requirements. Procedures outlined here, when followed, will result in tests in conformance with EPA Methods 28R, ASTM E2780, ASTM E2515, ASTM E2618, Method 28WHH, Method 28 PTS, Method ALT-125, ASTM E3053, ALT-134, ASTM E2779

The primary measurements to be made are particulate emissions rates. The technician's duties include the following steps.

1. Incoming inspection of test units.
2. Set-up of test units.
3. Preliminary testing to establish unit operating procedures and familiarity with operating controls.
4. Calibration of test equipment.
5. Set-up, checking and operation of sampling apparatus.
6. Conduct of tests including complete record keeping and data recording for non-automated functions.
7. Operation of hardware and software included in automatic data acquisition system.
8. Review and analysis of data at test completion to ensure test validity.

The technician running this test must be familiar with the following documents, which are to be kept in the laboratory at all, times.

EPA METHODS

1. EPA METHODS 28R
2. ASTM E2780
3. ASTM E2515
4. ASTM E2618
5. METHOD 28WHH
6. METHOD 28 PTS
7. ALT-125
8. ASTM E3053
9. ALT-134
10. ASTM E2779

POLYTESTS Services inc.

SFBA EMISSIONS AND EFFICIENCY TESTING LABORATORY OPERATING PROCEDURE

I. APPLIANCE INSPECTION AND SET-UP

A. INCOMING INSPECTION

1. Check for completeness of unit including parts, accessories, installation and operating instructions, drawings and specifications etc. Note any discrepancies or missing parts or information.
2. Check for shipping damage. If damage has occurred, notify the laboratory manager. In some cases, repairs may be made, provided the manufacturer and laboratory manager concur that repairs will not affect the unit's performance. If damage is irreparable, a new unit will need to be obtained.
3. Note whether unit is catalytic or non-catalytic.
4. Mark unit with manufacturer's name, model number, work order number and date received.
5. If unit is safety listed, note label data including listing agency and serial number. If unit is not listed, mark all data sheets "UNLISTED". Test results will not be released until unit passes safety tests without modification unless authorized by laboratory manager.

B. UNIT SET-UP

1. All new units must be operated for a breaking in period as follows.
 - a) Fifty (50) hours at medium burn rate with Douglas Fir scrap or cordwood. Between 18% and 25% MC.

During these break-in runs the unit may be connected to a lab chimney and fuel additions noted into the corresponding data acquisition file. For catalytic units, a thermocouple must be installed in the catalyst.

Record catalyst temperature at 1-hour intervals or on chart recorder. Operating should continue until data shows at least fifty (50) hours of operation with catalyst temperature in excess of 500 degrees Fahrenheit (active range).

For non-catalytic units a stack thermocouple should be installed and stack temperature recorded at 1-hour intervals. 50 hours minimum burn time with a stack temperature of at least 250 degrees Fahrenheit is required.

Once break-in is completed, allow unit to cool. Clean unit thoroughly.

POLYTESTS Services inc.

SFBA EMISSIONS AND EFFICIENCY TESTING LABORATORY OPERATING PROCEDURE

2. Unit is to be placed on scale for testing. Prior to proceeding with verification process, scale should be turned on and allowed to warm up for one (1) hour minimum. Zero scale and check calibration with standard weights. One (1) 1 kg weight and one (1) 2 kg weight are provided for this purpose. Use scale verification test form no. EPA-7-TP to record results. If scale fails to reproduce weights within tolerance, check with laboratory manager before proceeding.
3. If scale checks out, place unit on scale and align so chimney will be centered in hood.
4. Attach chimney connector and chimney. Be sure all joints are sealed below sampling points. Chimney and connector should be cleaned with a wire brush. Be sure chimney connector terminates and chimney starts at proper level above scale platform. Chimney must be supported from scale so that it does not touch test enclosure or hood walls.
5. Thermocouples should be attached to surfaces of unit prior to testing. EPA requires a thermocouple on the bottom of the firebox. This must be installed prior to putting the unit on the scale. In some cases, the required thermocouple locations will be inaccessible on finished units. These units should have thermocouples installed by the manufacturer during construction. Check with the laboratory manager if problems are encountered in proper thermocouple attachment.
6. Measure firebox dimensions and record on data forms nos. EPA-2-TP. Make a three-dimensional sketch of the firebox including firebrick, baffles and obstructions. Calculate firebox volume in cubic feet with both addition and subtraction methods using forms nos. EPA-3-TP and EPA-4-TP. See Section 6.2.4 of EPA Method 28 for details of firebox volume determination.
7. If unit is catalytically equipped, additional thermocouples must be installed upstream and downstream of catalyst. Thermocouples should also be placed in the primary and secondary combustion chambers of all units.
8. Plug thermocouples into data acquisition system jacks making a check of locations and jack numbers for each test on data form no. EPA-5-TP.
9. Note that inserts are tested as if they are freestanding stoves.
10. Dilution tunnel should be cleaned prior to each certification test series and at anytime a higher burn rate follows a lower test burn rate.

POLYTESTS Services inc.

SFBA EMISSIONS AND EFFICIENCY TESTING LABORATORY OPERATING PROCEDURE

II. SAMPLING SYSTEM – SET-UP

A. GAS ANALYSIS

1. Instruments should be turned on and allowed to warm up for one (1) hour minimum.
2. Calibrate analyzers as follows:

NOTE: Prior to proceeding with calibration, make sure to use NIST traceable calibration gas bottles. Adjust flow meter, if necessary, at each instrument to required flow value.

- a) Using span gas, adjust span control to values specified on calibration gas label.
- b) Using nitrogene, adjust zero controls to provide a 0.00 analyzer readout.
- c) Repeat a) and b) until no further adjustment is required.
- d) Check readout vs. calibration gases (2) labels.

The CO₂ and CO analyzers are “ZEROED” on nitrogen. The O₂ analyzer is spanned on air and set for 20.9%. It is zeroed on nitrogen as well.

3. Check for response time synchronization.
 - a) With no fire in unit, allow reading to stabilize (O₂ should be 20.93, CO and CO₂ should equal 0).
 - b) Flow the calibration gas in the unit and start stop watch. Note the time required for each unit to reach .90 of the calibration gas bottle value. If all three analyzers reach this value within 15 seconds of each other, synchronization is adequate. If not, contact the laboratory manager. Synchronization is adjusted by internal instrument setting.
4. Set-up sample clean-up and water collection train as follows.
 - a) Load impingers as follows:
Impinger #1: 100 ml distilled water and 5 ml H₂SO₄
Impinger #2: 100 ml distilled water and 5 ml H₂SO₄
Impinger #3: Empty
Impinger #4: 200 – 300 grams silica gel (dry)
 - b) Place impingers in container and connect with “U TUBES”. Grease carefully on bottom half of ball joint so that grease will not get into tubes.

POLYTESTS Services inc.

SFBA EMISSIONS AND EFFICIENCY TESTING LABORATORY OPERATING PROCEDURE

- c) Connect filter to first impinger and sample line to last impinger.

- e. Leak check system as follows.
 - 1) Plug probe.
 - 2) Turn on sample system.
 - 3) Observe sample flow rotometer and vacuum gauge. If necessary, use vacuum; adjust valve to set vacuum to the maximum inches Hg.
 - 4) If the float in rotometer does not stabilize below 10 on scale, system must be resealed.
 - 5) Repeat leak check procedure until satisfactory results are obtained.

- f) Just prior to starting test, fill impinger container with water and ice and record ambient conditions on data form no. EPA-8-TP.

B. DILUTION TUNNEL SAMPLE TRAIN SET-UP

- 1. Filters and holders.
 - a) Clean probes and filter holder front housings carefully and desiccate for at least 48 hours prior to use.
 - b) Filters should be numbered and filter and probe combinations labeled prior to use.
 - c) Weigh desiccated filters and probe-filter units on analytical balance. Record weights data form no. EPA-10-TP. Note that probe and front half of front filter are to be weighed as a unit.
 - d) Carefully assemble filter holder units and connect to sampling systems. Check "DRIERITE" columns for adequate dry absorbent (blue).

- 2. Leak checking.
 - a) Each sample system is to be checked for leakage prior to inserting probes in tunnel.
 - b) Plug probes and start samplers, adjust pump bypass valve to produce a vacuum reading of 10 inches Hg. (NOTE: During test, vacuum must not exceed 10 inches unless posttest leak check shows acceptable results.)
 - c) Allow vacuum indication to stabilize for two (2) minutes, then record time and dry gas (DGM₁) and (DGM₂) meter readings. Wait ten (10) minutes and record dry gas meter readings again (DGM₃, DGM₄).

POLYTESTS Services inc.

SFBA EMISSIONS AND EFFICIENCY TESTING LABORATORY OPERATING PROCEDURE

NOTE: If mark, system is leaking too much and all seals should be checked.

d) Calculate leakage rate as follows.

1) System 1: $\frac{(DGM_3 - DGM_1)}{10} = CFM_1$

2) System 2: $\frac{(DGM_4 - DGM_2)}{10} = CFM_2$

If CFM_1 or CFM_2 is greater than .02 CFM, leakage is unacceptable and system must be resealed.

If CFM_1 or CFM_2 is greater than $0.04 \times$ sample rate, leakage is unacceptable. For most tests, the sample rate will be about 0.15 CFM, thus leakage rates in excess of $0.04 \times 0.15 = 0.006$ CFM are not acceptable. Record leakage rates on form no. EPA-5-TP

e) Once leakage check is satisfactory, unplug probe and set flow to appropriate rate for test. This should be done in the minimum amount of time necessary and with the probes in ambient air. Do not insert probes in tunnel until the start of the test run. When flow is established, replug probes to prevent contamination.

III. TEST CONDUCT

A. FUEL LOAD

1. Determine optimum load weight by multiplying firebox volume in cubic feet by 7 or (10 and 12 for cordwood method). This is the load weight on an as-fired basis.
2. Determine piece size to obtain the requested load configuration and meet the test load weight criteria. The load should consist of the following: **TO BE DETERMINED**
3. Weigh out test load and adjust weight by shortening all pieces equally if necessary. Record individual piece load on form no. EPA-11-TP.

POLYTESTS Services inc.

SFBA EMISSIONS AND EFFICIENCY TESTING LABORATORY OPERATING PROCEDURE

4. Measure and record moisture content of each fuel piece using Delmhorst moisture meter. Determine if fuel load moisture content is in required range. If not, construct new load using wood with required moisture content. All wood in the humidity chamber should be within range. Contact project manager if you cannot find suitable pieces. Record moisture of each individual piece load on form no. EPA-11-TP.

B. UNIT START-UP

1. Before lighting a fire, turn on dilution tunnel and set tunnel velocity to 500ft/min Record readings on data form no. EPA-9-TP.
2. Check draft imposed on cold stove with all inlets closed and a draft gauge in the chimney. If draft is greater than 0.005 inches water column, adjust tunnel to stack gap until draft is less than 0.005.
3. Check for ambient airflow around unit with hot wire anemometer. Must be less than 50 ft/min.
4. Check all equipment for proper operation. Analyzers should be on and in sample mode. Computer should be loaded with test program and awaiting test start command.
5. Zero scale and start fire with uncolored newspaper and kindling representing 10 % of test load with the same type of fuel.
6. Once kindling is burning well after 5 minutes, add splitted pieces having a bottom surface around 4 sq. inches and representing 25% of test load weight. Operate at high fire for 15 minutes. Then adjust settings to intended test run levels as per the manufacturers.
7. Following addition of pretest fuel load (splitted pieces), start computer for data logging.
8. All fuel additions, air intake settings and operational characteristics shall be noted with associated time stamp on form no. EPA-1-TP.

POLYTESTS Services inc.

SFBA EMISSIONS AND EFFICIENCY TESTING LABORATORY OPERATING PROCEDURE

C. TEST RUN

1. Once the targeted test fuel bed weight is obtained, the test is to be started as follows:
 - a) Insert the sample probes into the tunnel being careful not to hit sides of tunnel with probe tip.
 - b) Check tunnel pitot tube for proper position. (Pitot should be carefully cleaned prior to each test.)
 - c) Turn on probe sample systems and stack sampler.
 - d) Open stove door, rake coals and load stove as follows: **TO BE DETERMINED**
 - e) Close door or follow manufacturer's start-up procedures. (Five (5) minutes maximum time before all doors and controls must be set to final positions for duration of test. 15 minutes or 15% of lad burned allowed for ALT-125 method))
 - f) An alarm will sound an audible signal at the (10) minutes intervals. This signals a reading interval. You must verify at each interval that the following readings are correctly logged by the data acquisition system and make observations of any unusual or non-routine events that could occur.
 - 1) Rotometer readings.
 - 2) Tunnel pitot tube reading.(Zero regularly between readings)
 - 3) Gas meter readings.
 - 4) Temperature readings.
 - 5) Draft reading
 - 6) Test load weight
 - 7) CO, CO₂ and O₂ readings
 - 8) Observations of any unusual or non-routine events.
 - g) During the test, any condition approaching unacceptable limits will be noted. The filter probes and housings are installed in small holders just outside the tunnel. If the filter temperature gets too high, you will have to increase the water flow through the cooling unit until acceptable temperatures are obtained. In between readings, check on other equipment. Be sure dryers and filters are working and monitor impinger train for proper water and ice levels etc.
 - h) When the fuel charge is consumed, it will signal end of test and shut down the sampling systems. When this occurs,

POLYTESTS Services inc.

SFBA EMISSIONS AND EFFICIENCY TESTING LABORATORY OPERATING PROCEDURE

remove filter holder and probes from tunnel and impingers from sample line.

IV. POST TEST PROCEDURES

A. SAMPLE RECOVERY – FILTER TRAINS

1. Carefully clean outside of probes and filter housings with alcohol.
2. Disassemble filter holder and transfer filters to clean petri dish. Scrape gasket with scalpel and collect any loose material on filters.
3. Place probe and front half of first filter holders (still assembled) and filters in desiccator. Allow 48-hour desiccation before weighing.
4. Weigh probe filter holder units and filters at six (6) hour intervals minimum until weight change between weightings is less than 0.2 mg. Record all weights taken on data form no. EPA-10-TP.

B. CALCULATION OF RESULTS

The computer program carries out all final calculations. When run, it will ask for data from forms used during the test. Enter data as called for.

GENERAL

This guide cannot cover every possible contingency, which may develop during a particular test program. Many questions, which may arise, can be answered by a complete understanding of the test standards and their intent. When in doubt on any detail, check with the laboratory manager and be sure you understand the procedures involved.

It is critical that all spaces on the data forms be properly filled in. Each test must be represented by a complete record of what was done and when.

|--------------|------------|

Total amount of particulate matter collected (m_n)

Equation used

ASTM 2515, equation 12

$$m_n = F_1 + F_2 + \Delta PF$$

Nomenclature

m_n Total amount of particulate matter collected, mg

F_{1+F2} Particulate matter collected on filters, mg

ΔPF Post-test weight gain of probe and filter holder assembly, mg

Sample calculation

Data

F_{1+F2} 0,0009 g

ΔPF 0,001 g

Calculation

m_n 2,100 mg

Calculation based of train 2 data

Particulate concentration (C_s)

Equation used

ASTM 2515, equation 13

$$C_s = (0,001 \text{ g/mg}) \times \left(\frac{m_n}{V_{m(\text{std})}} \right)$$

Nomenclature

| | |
|---------------------|---|
| C_s | Concentration of particulate matter in stack gas or dilution tunnel, dry basis, corrected to standard conditions, g/dsm^3 (g/dscf) |
| m_n | Total amount of particulate matter collected in the sampling train, mg |
| $V_{m(\text{std})}$ | Volume of gas sample measured corrected to dry standard conditions, dsm^3 (dscf) |

Sample calculation

Data

| | |
|---------------------|------------|
| m_n | 2,100 mg |
| $V_{m(\text{std})}$ | 11,85 dscf |

Calculation

| | |

| C_s | 0,000177 g/dscf |
|-------|-----------------|

Calculation based of train 2 data

Particulate concentration for room air (C_r)

Equation used

ASTM 2515, equation 14

$$C_r = (0,001 \text{ g/mg}) \times \left(\frac{m_r}{V_{mr(std)}} \right)$$

Nomenclature

| | |
|---------------|---|
| C_r | Concentration of particulate matter in room air, dry basis, corrected to standard conditions, g/dsm ³ (g/dscf) |
| m_r | Total amount of particulate matter collected in the sampling train, mg |
| $V_{mr(std)}$ | Volume of room air sample measured corrected to dry standard conditions, dsm ³ (dscf) |

Sample calculation

Data

| | |
|---------------|-----------|
| m_r | 0,100 mg |
| $V_{mr(std)}$ | 9,39 dscf |

Calculation

| | |
|-------|-----------------|
| C_r | 0,000011 g/dscf |
|-------|-----------------|

Calculation based of train 2 data

Adjustment factor for alternative pitot tube placement (FP)

Equation used

ASTM 2515, equation 1

$$F_P = \frac{V_{strav}}{V_{scent}}$$

Nomenclature

| | |
|-------------|--|
| V_{strav} | Average gas velocity cacluated after the Pitot tube traverse |
| V_{scent} | Average gas velocity at the center of the dilution tunnel cacluated after the multi-point Pitot traverse |
| F_P | Adjustment factor for center of tunnel pitot tube placement |

Sample calculation

Data

| | |
|-------------|-------------|
| V_{strav} | 0,269649082 |
| V_{scent} | 0,287226814 |

Calculation

| | |
|-------|----------|
| F_P | 0,938802 |
|-------|----------|

Average dilution tunnel gas velocity (V_S)

Equation used

ASTM 2515, equation 9

$$V_S = F_p K_p C_p (\sqrt{\Delta P})_{avg} \sqrt{\frac{T_S}{P_S M_S}}$$

Nomenclature

| | |
|---------------------------|---|
| V_S | Average dilution tunnel gas velocity, m/s (ft/s) |
| K_p | Pitot tube constant For the metric units: $34.97 \text{ m/sec} \left[\frac{(\frac{g}{g\text{-mole}})(\text{mm Hg})}{(^{\circ}K)(\text{mm H}_2\text{O})} \right]^{1/2}$ For English units: $85.49 \text{ ft/sec} \left[\frac{(\frac{lb}{lb\text{-mole}})(\text{in Hg})}{(^{\circ}R)(\text{in H}_2\text{O})} \right]^{1/2}$ |
| C_p | Pitot tube coefficient (use 0.99 for standard pitot tube, 0.84 may be used for S-type tubes constructed according to Method 2 specifications) |
| F_p | Pitot tube correction factor |
| $(\sqrt{\Delta P})_{avg}$ | Average square root of each individual velocity head (ΔP) |
| P_{bar} | Barometric pressure at measurement site, mm H ₂ O (in. H ₂ O) |
| P_g | Stack static pressure, mm Hg (in. Hg) |
| P_S | Absolute dilution tunnel static gas pressure, mm Hg (in. Hg), or $P_{bar} + P_g$ |
| M_S | Molecular weight of dilution tunnel gas, wet basis, g/g-mole (lb/lb-mol) may be assumed to be 28.78 or 29 for CSA B415 |
| t_s | Dilution tunnel temperature, °C (°F) |
| T_S | Absolute dilution tunnel temperature, °K (°R), or $273 + t_s$ for metric units, $460 + t_s$ for English units |

Sample calculation

Data

| | |
|---------------------------|---|
| K_p | 85,49 |
| C_p | 0,99 |
| F_p | 0,939 |
| $(\sqrt{\Delta P})_{avg}$ | 0,2879 in H ₂ O ^{1/2} |
| P_{bar} | 29,78 in Hg |
| P_g | 0,29 in H ₂ O |
| P_S | 29,80 in Hg |
| M_S | 29 lb/lb-mol |
| t_s | 103,78 F |
| T_S | 563,78 R |

Calculation

| | |

| V_S | 18,4742 ft/s |
|-------|--------------|

Average dilution tunnel gas flow rate (Qstd)

Equation used

ASTM 2515, equation 3

$$Q_{std} = 60(1 - B_{WS})V_S A \left(\frac{T_{std}}{T_S} \right) \left(\frac{P_S}{P_{std}} \right)$$

Nomenclature

| | |
|-----------|---|
| Q_{std} | Total gas flow rate corrected to dry standard conditions, dsm^3/min (dscf/min) |
| 60 | Conversion factor minutes per hour |
| B_{WS} | Water vapour in the dilution tunnel stream, proportion by volume (may be assumed to be 2%) |
| V_S | Average dilution tunnel gas velocity, m/s (ft/s) |
| A | Cross-sectional area of dilution tunnel, m^2 (ft^2) |
| T_{std} | Standard absolute temperature, 293 °K (528°R) |
| T_S | Absolute average dilution tunnel temperature, °K (°R), or $273 + t_S$ for metric units, $460 + t$ for English units |
| t_S | Dilution tunnel temperature, °C (°F) |
| P_S | Absolute dilution tunnel static gas pressure, mm Hg (in. Hg), or $P_{bar} + P_g$ |
| P_{bar} | Barometric pressure at measurement site, mm Hg (in. Hg) |
| P_g | Dilution tunnel static pressure, mm Hg (in. Hg) |
| P_{std} | Standard absolute pressure, 760 mm Hg (29.92 in. Hg) |

Sample calculation

Data

| | |
|-----------|---------------------|
| B_{WS} | 0,02 |
| V_S | 18,474 |
| A | 0,196 ft^2 |
| T_{std} | 528 R |
| T_S | 563,78 R |

Percent of proportional sampling rate (PR)

Equation used

B415, equation 13.1

$$PR = \left(\frac{\theta V_{mi(std)} V_S T_m T_{Si}}{\theta_i V_m V_{Si} T_{mi} T_S} \right) \times 100$$

Nomenclature

| | |
|---------------|--|
| PR | Percent of proportional sampling rate (%) |
| θ | Total sampling time, min |
| θ_i | Time of interval, 1 min |
| V_m | Volume of gas sample measured by the DGM, dsm ³ (dscf) |
| $V_{mi(std)}$ | Volume of gas sample measured by the digital mass flow controller during the i th 1 minutes interval, dsm ³ (dscf) |
| V_S | Average gas velocity in the dilution tunnel, ft/min |
| V_{Si} | Average gas velocity in the dilution tunnel during the i th 10 minutes interval, ft/min |
| T_m | Absolute average digital mass flow controller temperature, K (R) |
| T_{mi} | Absolute average digital mass flow controller temperature during the i th 1 minutes |
| T_S | Absolute average gas temperature in the dilution tunnel, K (R) |
| T_{Si} | Absolute average gas temperature in the dilution tunnel during the i th 1 minutes |

Sample calculation

Objet: RE: Overall Firebox Volume versus Usable Firebox Volume Using the Crib Wood Test Method 28.

Dear Mr. Nielsen,

We reviewed your request yesterday and we find that your calculations are correct and you are cleared for using your calculated usable firebox volume for the purposes of a crib fuel compliance test.

Please let us know if you have additional questions.

With my sincere regards,

Steffan Johnson
US EPA

Dear Mr. Johnson,

Thank you for your prompt response. I appreciate your wishes for a great New Year, and I extend the same to you.

We are grateful for your attention to our request. It's our sincere effort to educate our customers about the optimal usage of our wood stoves. Currently, the calculated woodload based on the suggested usable firebox volumes is approaching the upper limit, especially when compared to the recommendations we provide to our European customers using the same stoves. Emphasizing the importance of maintaining a reasonable 'free' space above the woodload, we guide our customers on achieving optimal gas mixing and combustion efficiency to minimize emissions and enhance overall efficiency. It's crucial to note that our stoves are not designed for extended 'overnight' burning.

Should you require additional information to further support our request, please do not hesitate to let us know. We are committed to ensuring that our certification aligns with the highest standards and promotes responsible and efficient wood stove usage.

Thank you for your ongoing support.

Med venlig hilsen / Best regards

Subject: Overall Firebox Volume versus Usable Firebox Volume Using the Crib Wood Test Method 28.

Caution: This email originated from outside EPA, please exercise additional caution when deciding whether to open attachments or click on provided links.

Dear Mr. Johanson,

I hope this message finds you well. Following our recent discussion on the Usable Firebox Volume using the Crib Wood Test Method 28 (as detailed in the email thread below), we are reaching out to seek your guidance and approval for the upcoming recertification process of two of our wood stoves.

As the EPA certifications for these stoves are set to expire this year, we are initiating the renewal process. Since the original certifications were based on the now-cancelled ASTM E3053-17 Cordwood method, we are adapting to the current scenario by opting for the EPA Method 28 Cribwood test method for the upcoming certification tests.

In alignment with the guidelines provided in your previous response, we have calculated the usable firebox volume for the mentioned stoves. Attached to this email, you will find the drawings that outline the proposed firebox volumes. It's worth noting that these volumes are identical to those previously used for the Cordwood method.

Before commencing with the testing phase, we kindly request your approval for the proposed firebox volumes. Your timely response and guidance in this matter are crucial for ensuring a smooth and efficient recertification process.

Thank you for your continued support, and we look forward to your response.

Emne: RE: Overall Firebox Volume versus Usable Firebox Volume Using the Crib Wood Test Method 28.

Greetings Mr. Nielson,

Thank you for sending your question regarding usable firebox volume to the Measurement Technology Group.

Our crib fuel test method (EPA 28r) refers to the ASTM E-2780 test method for most of its instructions. Within ASTM E-2780 you will find this section:

3.2.7 *firebox height, n*—unless otherwise specified in the manufacturer’s written instructions included with the heater, firebox height is the vertical distance extending above the loading door, if fuel could reasonably occupy that space, but not more than 2 inches above the top (peak height) of the loading door, to the floor of the firebox (i.e., below a permanent grate) if the grate allows a 1-inch diameter piece of wood to pass through the grate, or, if not, to the top of the grate. Firebox height is not necessarily uniform but must account for variations caused by internal baffles, air channels, or other permanent obstructions. A visible indicator or landmark within the firebox that will provide a clear indication to the heater user of the maximum height that fuel should be loaded, and is specifically referenced in the manufacturer’s written instructions, may be used to determine firebox height for the purposes of calculating usable firebox volume.

So what would be needed is a clear and permanent indicator of maximum fuel load height that is visible to the user of the appliance even after some time of use, and is also well documented as the maximum loading level in the appliance user manual.

I hope that this is helpful information.

With sincere regards,

Stef Johnson

Subject: Overall Firebox Volume versus Usable Firebox Volume Using the Crib Wood Test Method 28.

Dear Mr. Johnson, Ms. Brashear

Re: Overall Firebox Volume versus Usable Firebox Volume Using the Crib Wood Test Method 28.

I am writing to you on behalf of Morsø Jernstøberi A/S, a Danish wood stove manufacturer with a range of EPA certified wood stoves on the North American market. We have recently developed a new wood stove that has been tested and certified for the European market, and we plan to have it certified for North America as well.

Unfortunately, the recent uncertainty regarding test methods and the withdrawal of the ALT 125 or ASTM E3053 test method has made the road to certification longer and more challenging. From our perspective, it seems like the old Crib Wood method 28 is the safest bet for now and the coming few years. However, one of the problems with this method is that it favors low "roofed" rectangular fireboxes, so that the calculated wood just fits inside. For a tall, round, or elliptical shaped firebox, the calculated wood load would be so big that a successful certification test is not likely.

Here is a real-life example:

From this example, even for a layman, it is obvious that the firebox is overloaded. To sum up the issues that this big load causes, it blocks the combustion air paths and/or supply air unintentionally, and there is a danger of burning wood falling out. The intended use recommends using a maximum of 3-4 wood logs, which would be 1/3 of the height of the firebox. This leaves room for secondary air coming from the upper part of the back wall to mix with gases from the underlying wood load and burn unhindered. Using the recommended amount of wood would enable the air wash to reach and activate the coals.

All of this leads us to ask: Is there a way for this test method to have the wood load reduced by calculating the load from usable firebox volume versus the overall firebox volume?

The usable firebox volume would be defined later for the specific wood stove. The option to define and declare a (reasonable) usable firebox volume was one of the best improvements in the ALT 125 (ASTM E3053) compared to the Crib Wood method.

Thank you for your time and consideration. We look forward to hearing your thoughts on this matter.

Sincerely,

Med venlig hilsen / Best regards

Useable firebox volume Morsø 6100 B series

Useable firebox height for Morsø 6100 B series is from the grate up to the top end of the back stone lining

Firebox width is from side stone lining to opposite side stone lining.

Firebox depth is from back stone lining to the front lip of the grate

Useable firebox volume:

**0,01479 m³
0,52224 ft³**

APPENDIX 13: Operating instruction

Operating instruction Morso 6100 B series

Maximum burn rate

- Air damper fully open
- Start the fire with 1.8lbs of kindling
- Keep the door open for a good ignition
- At 1.7 lbs the door can be closed
- At 0.5 lbs insert warmup preload and close the door
- At 0.7 lbs insert preload and keep the door open for 3 minutes for a good ignition
- At 1.0 lbs rake coal bed, insert the load and keep the door slightly open for 3 minutes

Medium burn rate

- Air damper fully open
- Start the fire with 1.9 lbs of kindling
- Keep the door open for a good ignition
- At 1.7 lbs the door can be closed and set the air control at mid-point
- At 0.5 lbs insert preload and keep the door open for 2 minutes for a good ignition.
- At 0.9 lbs rake coal bed, insert the load, keep the door slightly open for 3 minutes and open-air inlet at the maximum.
- At 4 minutes set the air damper to mid-point for medium setting

Minimum burn rate

- Air inlet fully open
- Start the fire with 1.9 lbs of kindling
- Keep the door open for a good ignition
- At 1.7 lbs the door can be closed
- At 0.5 lbs insert preload and keep the door open for 3 minutes for a good ignition
- At 3.8 lbs close the air inlet to minimum setting
- At 1.0 lbs rake coal bed, insert the load, keep the door slightly open for 3 minutes and open-air inlet at the maximum.
- At 5 minutes, close the air damper to minimum setting

APPENDIX 14: Drawing Air flow pattern

Primary air
Secondary air

Primary air / Secondary air

Primary air
Secondary air

Primary air
Secondary air

Secondary Air max.:
 $2 \times 314 \text{ mm}^2 = 628 \text{ mm}^2$

Primary Air:
 $2 \times 642 \text{ mm}^2 = 1284 \text{ mm}^2$

APPENDIX 15: WHA, CoC, 30 Day notice, Other

**U.S. ENVIRONMENTAL PROTECTION AGENCY (EPA)
30-DAY NOTIFICATION FORM
PURSUANT TO 40 CFR PART 60 SUBPARTS AAA AND QQQQ
2015 STANDARDS OF PERFORMANCE FOR NEW RESIDENTIAL WOOD HEATERS, NEW
RESIDENTIAL HYDRONIC HEATERS AND FORCED-AIR FURNACES**

Disclaimer: The statutory provisions and the EPA regulations described in this document contain legally binding requirements. This document is not a substitute for those provisions or regulations, nor is it a regulation itself. In the event of a discrepancy, please refer to 40 CFR PART 60 Subparts AAA AND QQQQ, Sections 60.533 and 60.5475. This document may be revised periodically without public notice. If you have additional questions, please contact Rafael Sanchez at 202-564-7028 or via email at sanchez.rafael@epa.gov.

- ▶ The manufacturer of an affected wood/pellet heater/central heater model line must notify the Administrator of the date that certification testing is scheduled to begin by email to WoodHeaterReports@epa.gov.
- ▶ This notice must be received by the EPA at least 30 days before the start of testing.

COMPLIANCE STATEMENTS AND ACKNOWLEDGEMENTS – SECTIONS 60.533(B) AND 60.5475(B)
INSTRUCTIONS: PLEASE READ THE BELOW STATEMENTS AND AFFIRMATIONS AND ADDRESS ACCORDINGLY.

FOR EMISSIONS DATA SUMMARY TABLES SEE ATTACHMENTS

1. Engineering Drawings Statement

We affirm that the engineering drawings and specifications provided include all components affecting emissions, as outlined in 40 CFR §60.533(b)(k)(2)-(4) and §60.5475(b). These drawings designate the dimensions and tolerances of all relevant components. It is affirmed that the tolerances specified cannot reasonably be anticipated to cause non-compliance with emission limits.

2. Firebox Statement Requirement

We affirm that the test wood stove submitted for certification testing is identical in all material respects to the commercial wood stoves being produced and marketed. This includes all components, materials, and dimensions that may affect emissions or efficiency.

3. CBI

We affirm that all CBI is clearly identified and submitted separately to the EPA CBI Office as per the procedures outlined in the EPA guidelines. Non-CBI emissions data necessary for compliance determination are included within the application.

4. Valid Certification Statement

We affirm that all test reports, raw data sheets, and associated documentation are complete and comply with the requirements of 40 CFR §60.537(f) and §60.5475(f). The submission includes explanations of anomalies, if any, and a clear summary of results.

5. Warranties

We affirm that the warranty provided complies with the EPA requirements. It includes a statement that the warranty is void if the unit is not operated per the owner's manual or if unauthorized materials are burned. Clear instructions for exercising the warranty are included in the owner's manual, referencing text as per Appendix I to 40 CFR Part 60.

6. Q/A Statement

We affirm the existence and implementation of a quality assurance program meeting the requirements of 40 CFR §60.533(m).

7. Laboratory Sealing of Unit

We affirm that the laboratory-sealed units used for certification testing are stored in their sealed state for a minimum of five years post-certification testing, as required by EPA regulations.

8. Model Compliance Statement

We affirm that all wood heaters manufactured under this certification are materially identical to the certified test unit and are labeled as per 40 CFR §60.536 and §60.5478. Each unit is accompanied by a compliant owner's manual available on our website.

9. Third Party Certification Statement

We affirm that contracts with EPA-approved laboratories and certifiers meet all the requirements outlined in 40 CFR §60.533(f).

10. Approved laboratory/third party Statement

We affirm that the EPA-approved laboratory (PolyTest Services Inc.) and the EPA-approved third-party certifier (PFS TECO) are authorized to submit information on behalf of the manufacturer, including any information claimed as Confidential Business Information (CBI).

11. Manufacturer's Website Certification Test Reports Availability Statement

We affirm that the certification test report and summary will be made publicly available on our website within 30 days of certification issuance.

12. Transferability Acknowledgement Statement

We affirm acknowledgment that the certification is non-transferable without EPA approval.

13. Statement about Selling Wood Heaters without an EPA Certificate

We affirm acknowledgment that it is unlawful to sell or distribute any uncertified wood heater under this application.

Print Name and Title: Frank Juel Nielsen, R&D Engineer

Date: December 3, 2024

Signature of responsible representative of the manufacturer certifying the accuracy of the above statements:

The authorized or responsible party whose signature is above is certifying that the manufacturer has complied with and will continue to comply with all requirements of the 2015 NSPS for compliance certification and that the manufacturer remains responsible for compliance regardless of any error by the test laboratory or third-party certifier.
